....BINDERS....
FOR THE
Western Electrician
$1.00 EACH.
ELECTRICIAN PUB. CO.,
CHICAGO.

The business of the Western Electrician for the year 1903 was the largest in its history of 17 years.

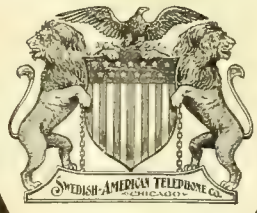
Judged by Results

Our product leads all others, that's why so many experienced and up-to-date telephone buyers indorse our instruments. An investment of 1 cent and a moment's time in asking us, will get for you our new catalogue and prices.

It will be poor business to overlook us when in the market.

SWEDISH-AMERICAN TELEPHONE CO.
CHICAGO, ILL.

WHEREVER YOU SEE THIS



YOU ARE REMINDED OF TOP NOTCH QUALITY

Not Luck

but hard work, experience, brains, energy, time, money, intelligence and common sense have made for our apparatus a record unapproached by others.

Our goods deliver the service in dividend paying quantities.

FORT WAYNE ELECTRIC WORKS

"WOOD" LIGHTING AND POWER SYSTEMS

LARGE POWER GENERATORS

Type M P L 10 400-120

Type M P L Frame.

All true engineers say that symmetry of form is a strong indication of theoretically correct design.

The outward appearance of Fort Wayne apparatus is but the reflection of inherent excellence of design and construction.

Excellence in details of design and painstaking care in executing these details result in the most economical use of material and secure highest efficiency in operation.

Cool running obtained by thorough field and armature ventilation, sparkless commutation secured by correct electrical design and uniformly good behavior under adverse circumstances have made for these generators many permanent friends.

Standard sizes up to 800 kilowatts described in Bulletin 1050. Bulletin 1049 tells where they are used. Both sent when asked for. 196

SACHS TRADE NOARK MARK FUSE

EXTRACT FROM REPORT OF

Test of 15,000-Volt, 30-Amp.

SACHS "NOARK" FUSES

AT ONE OF THE

Largest High Potential Transmission Plants

"TWO 750-KILOWATT TRANSFORMERS: COLD FUSE PLACED DIRECT ACROSS TRANSFORMER TERMINALS.

"FIRST—Blew in a fraction of a second, without noise or apparent strain, tube not more than perceptibly heated.

"SECOND—Blew as No. 1, except that there was indication (in sound of generator) that the current made again for an instant after the first interruption, and a very slight discharge through vent holes in end of tube.

"THIRD—One generator was removed, leaving only one. Fuse blew quietly and with no sign of strain in about one second.

"You will note from the above that the performance was quite satisfactory, and we will be pleased to have you advise us how soon we may expect shipment of the completed fuses and fuse blocks for our complete installation."

If you are looking for a safe and accurate Protective Device for similar service, let us do the same for you.

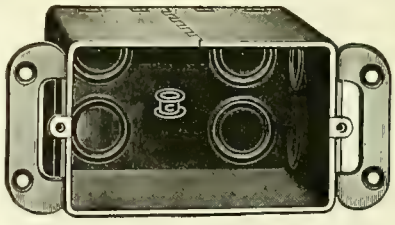
"Union" Outlet Switch Boxes

PATENTS PENDING



STYLE B.

"Union" Switch Box. This style fits Rectangular Push Button Switches and Receptacles having connections 3¼" c. to c. Dimensions under switch plate, 4⅛" x 2"; outside dimensions at bottom, 3⅛" x 2"; inside depth, 2⅜".

"Union" boxes will take all well-known Push-Button Switches, including "Perkins," "G. I.," "C. & S.," "H. & H.," "Diamond H.," etc.; also most of the Flush Receptacles in common use. Manufactured by

CHICAGO FUSE WIRE & MFG. CO.

358 Dearborn St., Chicago. 863 Broadway, New York. 187 Pratt St., Buffalo.

VITRIFIED CLAY CONDUITS

IN 1, 2, 3, 4 AND 6 DUCT.

Superior Conduits for underground wires a specialty.

General Office and Factory:
PITTSBURG, KAN.

Branch Office and Sale Yard: 2417 East 18th Street, KANSAS CITY, MO.

REFERENCES

IF YOU are not using Columbia Enclosed Arc Carbons now we can refer you to thousands who are, but we would rather refer a sample box of a thousand to you with the understanding that you can refer them back at our expense if they do not suit better than any other brand. :: ::. ::

NATIONAL CARBON CO.

CLEVELAND, OHIO

BITUMINIZED FIBER CONDUIT

The Electrical Engineer Who Has a Subway to Construct

—and—

Wishes the best possible protection to his cables
A conduit of endless durability
A continuous, sealed insulating duct from manhole to manhole; impervious to gas and moisture and *Electrolysis-proof*
A duct that is and remains *perfectly aligned*, into which and out of which he can draw cables with ease and rapidity, without the possibility of a scratch

And wishes to save his company sixty per cent. of freight and handling costs and twenty to thirty-five per cent. of construction cost

Will write for our Illustrated Book and Prices.

All diameters from one inch to ten inches, seven foot lengths. Bends of all angles.

AMERICAN CONDUIT COMPANY

Keep Up With the Procession.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

ALLSOP, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators and similar apparatus. 177 illustrations.....$1.25

ATKINSON, PHILIP. The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

ATKINSON, PHILIP. The elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

AYRTON, W. E.—Practical Electricity; a Laboratory and Lecture Course for First year Students of Electrical Engineering. Based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

BADT, LIEUT F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

BADT, LIEUT. F. B.—Incandescent Wiring Hand Book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

BADT, LIEUT. F. B.—Bell Hangers' Hand Book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.....$1.00

BADT, LIEUT. F. B.—Electric Transmission Hand Book. First edition, 3,000 copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more Practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

BEDELL, FREDK AND ALBERT C. CREHORE.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

BELL, LOUIS, PH. D.—The Art of Illumination. This is the only book in the language which deals directly with the scientific and artistic use of modern illuminants, electric and other. Cloth, 339 pages, 127 illustrations. Price.....$2.50

BONNEY, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations, 208 pages. 12mo. cloth....$1.25

BOTTONE, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand Book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

BOTTONE, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

BOTTONE, S. R. Electro-Motors. How Made and How Used. A Hand Book for Amateurs and Practical Men. Reduced to.....$0.50

BUCKLEY, W. J.—Electric Lighting Plants, Their Cost and Operation. 275 pages, many illustrations and diagrams. Paper.....$1.00

CROCKER, F. B. AND WHEELER, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

CUSHING, H. C., JR.—Standard Wiring for Electric Light and Power. A compilation of formulæ, rules and requirements from the most modern practice, and in accordance with the rules and requirements of the Boston Fire Underwriters' Union, the New England Insurance Exchange, and as recommended by the Underwriters' International Electric Association. 12mo., leather.....$1.00

DESMOND, CHAS.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Altenate Electric Currents. Illustrated. Revised edition.....$2.50

DOBBS, A. E.—The Inspector and Trouble Man. A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards. 106 pages. Price...$1.00

DYER, A.—Induction Coils, How Made and How Used. Third edition Boards.....$0.50

FLEMING, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations..$1.50

FLEMING, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents. 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents. 8vo., cloth. London, 1892.....$5.00

GAYETTY, J. W.—Motorman's Guide. A Practical Treatise on Street Railway Motors. Illustrations and diagrams. Cloth.....$0.50

GORDON.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations..$2.00

GORE, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

GRIER, THOS. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.....$1.00

HASKINS, C. C.—Electricity Made Simple. 233 pages, 108 illustrations. Paper covers.....$0.50
A valuable, non-technical work for those whose opportunities for gaining information on the branches treated have been limited.

HASKINS, C. H.—The Galvanometer and Its Uses. A Manual for Electricians and Students. Fourth edition; revised.....$1.50

HASKINS.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

HAWKINS, C. C. AND F. WALLIS.—The Dynamo, Its Theory, Design and Manufacture. 190 illustrations.$3.00

HAWKINS, N.—New Catechism of Electricity. A Practical Treatise Relating to the Dynamo and Motor, Wiring, the Electric Railway, Bell Fitting, etc., etc. Red leather, pocketbook form. 95 illustrations....$2.00

HOMANS, J. E., A. M.—A, B, C OF THE TELEPHONE. 332 pages, 269 illustrations. Price.....$1.00
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

HOPKINS, GEO. M.—Experimental Science. Elementary, Practical and Experimental Physics. 650 illustrations.....$4.00

HOPKINSON.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

HOPKINSON, DR. JOHN.—Dynamic Electricity; Its Modern Use and Measurements, Chiefly in Its Application to Electric Lighting and Telegraphy.....$0.50

HORSTMANN, H. C. AND VICTOR H. TOUSLEY.—Modern Wiring Diagrams and Descriptions. A Hand Book of Practical Diagrams and Information for Electrical Workers. 160 pages, over 200 illustrations. Full leather binding, pocket size 4x6.....$1.50

HOSPITALIER, E.—Domestic Electricity for Amateurs; Translated from the French, with additions by C. J. Wharton. With illustrations.....$2.50

HOUSTON, EDWIN J.—A Dictionary of Electrical Words, Terms and Phrases. Fourth edition, greatly enlarged, with over 6,000 additional words and definitions. 2 volumes, 1,000 pages.....$6.00

KAPP, GISBERT.—Electric Transmission of Energy and Its Transformation, Subdivision and Distribution. A practical hand book. Fourth edition.....$3.00

KAPP, GISBERT.—Alternate Current Machinery. Illustrated.....$0.50
(Vol. 96 Van Nostrand's Science Series.)

KAPP, GISBERT.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

KEMPE, H. R.—A Hand Book of Electrical Testing. Fifth edition. 200 illustrations. 8vo cloth. London 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

KEMPE, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables, and Data. 32 mo. Leather.....$1.75

LOCKWOOD, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Hand Book of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations.....$2.50

LOCKWOOD, T. D.—Electrical Measurement and the Galvanometer; Its Construction and Use. Second edition.....$1.50

LYNDON, L.—Storage Battery Engineering. A Practical Treatise for Engineers. This is a practical work, intended for the electrical engineer who is called on to design and install storage battery equipments, or who has a battery power plant under his care. Cloth. 360 pages, 178 illustrations and diagrams, 4 large folding plates. Price.....$3.00

MEADOWCROFT, W. H.—The A, B, C of Electricity. 36 illustrations. 12mo, cloth. New York.....$0.50

MAYER, AND DAVIS, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

MEYER, HENRY, C., JR., M. E.—Steam Power Plants. Their Design and Construction. Cloth. 165 pages, 63 illustrations, 15 folding plates. Price.....$2.00

MILLER, KEMPSTER B.—American Telephone Practice. 518 large octavo pages, 379 illustrations.....$3.00
This book treats of the subject in a simple and comprehensive manner from the practical standpoint, and almost entirely without the use of mathematics.

NOLL, AUGUSTUS.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

POPE, FRANKLIN LEONARD.—Modern Practice of the Electric Telegraph. A technical hand book for Electricians, Managers and Operators. 185 illustrations. Fourteenth edition, rewritten and enlarged.....$1.50

PRINDLE, H. B.—A Popular Treatise on the Electric Railway of To-day. Fully illustrated.....$0.25

REED, LYMAN C.—American Meter Practice. This is the only American book dealing with the theory and practice of current metering. Cloth. About 250 pages, illustrated. Price.....$2.00

RUSSELL, STUART A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

SALOMONS, SIR DAVID.—Electric Light Installations. Vol 1. The Management of Accumulators. A Practical Hand Book. Seventh edition, revised and enlarged. With illustrations. 12mo., cl. London, 1893....$1.50

SLOANE, T. O'CONNOR.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of Its Practical Application in every day life. Illustrated.....$1.00

SLOANE, T. O'CONNOR.—The Standard Electrical Dictionary. A popular dictionary of words and terms used in the practice of electrical engineering. 350 illustrations.....$3.00

Engineer's Formulas Wanted

We are about to publish a booklet for the use of engineers and power users. To make it as complete and practical as possible, we want every engineer or power user who has a tested formula or recipe relating to boiler or engine practice, or to power development, to send it to us, no matter how simple or old it may be.

With the formula send this advertisement, the diameter of your engine stuffing box and piston rod, your name and the address of the concern you work for.

We will promptly send enough EUREKA PACKING for a trial, and later, the booklet. Every good formula will be published with the name of the man who sent it in.

Send your formula today, as we wish to print the booklet soon. But don't forget to send the dimensions and address.

THE TELEPHONE HAND-BOOK

NEW AND REVISED EDITION, WITH A NEW CHAPTER ON "RECENT PROGRESS," BRINGING THE BOOK UP TO DATE.

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

160 Pages, 133 Illustrations, Cloth, Hand-Book Size, Price $1.00.

Extract from Preface.—"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
42. Simultaneous Telegraphy and Telephony.
42. Recent Progress. Appendix.

Experimenting

in the buying and equipping of telephone systems is exceedingly expensive and invariably a loss.

The Kellogg telephones and switchboard apparatus are offered as thoroughly tried and proven. This is an important consideration when so many telephone manufacturers are confessedly putting experimental stuff on the market.

Kellogg apparatus represents Highest Efficiency with Greatest Economy.

SAMSON TURBINE
The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

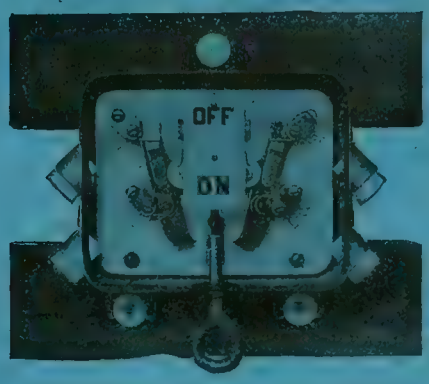
FORT WAYNE ELECTRIC WORKS

"WOOD" LIGHTING AND POWER SYSTEMS

Arc Circuit Cut-Outs



These cut-outs are designed for use on direct or alternating current series circuits of any voltage to control circuits of not over 2,500 volts.

They are exceptionally durable. In a life test one of these cut-outs was operated ten hours by a wheel and crank opening and closing a 2,500-volt 9.6-ampere circuit over 50,000 times with no evidence of injury or depreciation.

During the many years they have been in use no demand has been made for repair parts.

These "Wood" arc circuit cut-outs have been specified by the Insurance Bureau of the Louisiana Purchase Exposition for all World's Fair work.

Described in Bulletin No. 1042, sent free on request.

A simple and efficient brush-holder is one feature contributing to the reliable operation of our dynamos and motors.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 159 pp. Price $1.00.
This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 5th edition. 800 pp. 359 illustrations. Price $3.00.
This is the best complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The operations and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 176 pp. Price $1.00.
A practical book, written in plain language. Full of [illegible] and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephone and switch boards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 263 illustrations. Price $1.00.
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on the subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.
A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price, $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. 136 pp.; illustrated. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

BITUMINIZED FIBER CONDUIT

(PATENTED)

Electrolysis-proof and impervious to moisture and gas.

A smooth laminated insulator withstanding 50,000 volts a.c., made on electrical lines and cannot scratch the cables.

It is of unchanging durability, proof against all forms of corrosion or decay.

More enduring than granite.

The bitumen of asphaltum and coal deposits have remained unchanged in the ground for thousands of years.

Made in seven-foot lengths of all diameters from one inch to ten inches.

It is also the cheapest, as it saves 60 per cent. of transporting and handling cost and 20 per cent. of subway construction.

For illustrated books, prices and information apply to

AMERICAN CONDUIT COMPANY

170 Broadway, New York, N. Y. — 336 Macy St. Los Angeles, Cal. — Manhattan Bldg., Chicago, Ill.

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. By CLARK CARYL HASKINS. Cloth $1.00. Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text-book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS. FOR STUDY OR REFERENCE.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

Keep Up With the Procession.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

ALLSOP, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators and similar apparatus. 177 illustrations.....$1.25

ATKINSON, PHILIP.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

ATKINSON, PHILIP.—The elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2 00

AYRTON, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering. Based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

BADT, LIEUT F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

BADT, LIEUT. F. B.—Incandescent Wiring Hand Book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1 00

BADT, LIEUT. F. B.—Bell Hangers' Hand Book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.....$1.00

BADT, LIEUT. F. B.—Electric Transmission Hand Book. First edition, 3,000 copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more Practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

BEDELL, FRED'K AND ALBERT C. CREHORE.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2 50

BELL, LOUIS, PH. D.—The Art of Illumination. This is the only book in the language which deals directly with the scientific and artistic use of modern illuminants, electric and other. Cloth, 339 pages, 127 illustrations. Price.....$2 50

BONNEY, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations, 208 pages. 12mo. cloth....$1.25

BOTTONE, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand Book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

BOTTONE, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

BOTTONE, S. R.—Electro-Motors. How Made and How Used. A Hand Book for Amateurs and Practical Men. Reduced to.....$0.50

BUCKLEY, W. J.—Electric Lighting Plants, Their Cost and Operation. 275 pages, many illustrations and diagrams. Paper.....$1.00

CROCKER, F. B. AND WHEELER, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

CUSHING, H. C., JR.—Standard Wiring for Electric Light and Power. A compilation of formulæ, rules and requirements from the most modern practice, and in accordance with the rules and requirements of the Boston Fire Underwriters' Union, the New England Insurance Exchange, and as recommended by the Underwriters' International Electric Association. 12mo., leather.....$1.00

DESMOND, CHAS.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with, Alternate Electric Currents. Illustrated. Revised edition.....$2 50

DOBBS, A. E.—The Inspector and Trouble Man. A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards. 106 pages. Price...$1.00

DYER, A.—Induction Coils, How Made and How Used. Third edition. Boards.....$0.50

FLEMING, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations..$1.50

FLEMING, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents. 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents. 8vo., cloth. London, 1892.....$5.00

GAYETTY, J. W.—Motorman's Guide. A Practical Treatise on Street Railway Motors. Illustrations and diagrams. Cloth.....$0.50

GORDON.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations..$2.00

GORE, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

GRIER, THOS. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.....$1.00

HASKINS, C. C.—Electricity Made Simple. 233 pages, 108 illustrations. Paper covers.....$0.50
A valuable, non-technical work for those whose opportunities for gaining information on the branches treated have been limited.

HASKINS, C. H.—The Galvanometer and Its Uses. A Manual for Electricians and Students. Fourth edition; revised.....$1.50

HASKINS.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

HAWKINS, C. C. AND F. WALLIS.—The Dynamo, Its Theory, Design and Manufacture. 190 illustrations.$3.00

HAWKINS, N.—New Catechism of Electricity. A Practical Treatise Relating to the Dynamo and Motor, Wiring, the Electric Railway, Bell Fitting, etc., etc. Red leather, pocketbook form. 95 illustrations....$2.00

HOMANS, J. E., A. M.—A, B, C OF THE TELEPHONE. 352 pages, 269 illustrations. Price.....$1 00
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

HOPKINS, GEO. M.—Experimental Science. Elementary, Practical and Experimental Physics. 650 illustrations.....$4 00

HOPKINSON.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

HOPKINSON, DR. JOHN.—Dynamic Electricity; Its Modern Use and Measurements, Chiefly in Its Application to Electric Lighting and Telegraphy.....$0.50

HORSTMANN, H. C. AND VICTOR H. TOUSLEY.—Modern Wiring Diagrams and Descriptions. A Hand Book of Practical Diagrams and Information for Electrical Workers. 160 pages, over 200 illustrations. Full leather binding, pocket size 4x6.....$1.50

HOSPITALIER, E.—Domestic Electricity for Amateurs; Translated from the French, with additions by C. J. Wharton. With illustrations.....$2.50

HOUSTON, EDWIN J.—A Dictionary of Electrical Words, Terms and Phrases. Fourth edition, greatly enlarged, with over 6,000 additional words and definitions. 2 volumes, 1,000 pages.....$6.00

KAPP, GISBERT.—Electric Transmission of Energy and Its Transformation, Subdivision and Distribution. A practical hand book. Fourth edition.....$3.00

KAPP, GISBERT.—Alternate Current Machinery. Illustrated.....$0.50
(Vol. 96 Van Nostrand's Science Series.)

KAPP, GISBERT.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

KEMPE, H. R.—A Hand Book of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London. 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

KEMPE, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables, and Data. 32 mo. Leather.....$1.75

LOCKWOOD, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Hand Book of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations.....$2.50

LOCKWOOD, T. D.—Electrical Measurement and the Galvanometer; Its Construction and Use. Second edition.....$1.50

LYNDON, L.—Storage Battery Engineering. A Practical Treatise for Engineers. This is a practical work, intended for the electrical engineer who is called on to design and install storage battery equipments, or who has a battery power plant under his care. Cloth. 360 pages, 178 illustrations and diagrams, 4 large folding plates. Price.....$3.00

MEADOWCROFT, W. H.—The A, B, C of Electricity. 36 illustrations. 12mo, cloth. New York.....$0.50

MAVER, AND DAVIS, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

MEYER, HENRY, C., JR., M. E.—Steam Power Plants. Their Design and Construction. Cloth. 165 pages, 63 illustrations, 15 folding plates. Price.....$2.00

MILLER, KEMPSTER B.—American Telephone Practice. 518 large ovtavo pages, 379 illustrations.....$3.00
This book treats of the subject in a simple and comprehensive manner from the practical standpoint, and almost entirely without the use of mathematics.

NOLL, AUGUSTUS.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

POPE, FRANKLIN LEONARD.—Modern Practice of the Electric Telegraph. A technical hand book for Electricians, Managers and Operators. 185 illustrations. Fourteenth edition, rewritten and enlarged.....$1.50

PRINDLE, H. B.—A Popular Treatise on the Electric Railway of To-day. Fully illustrated.....$0.25

REED, LYMAN C.—American Meter Practice. This is the only American book dealing with the theory and practice of current metering. Cloth. About 250 pages. Illustrated. Price.....$2.00

RUSSELL, STUART A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

SALOMONS, SIR DAVID.—Electric Light Installations. Vol 1. The Management of Accumulators. A Practical Hand Book. Seventh edition, revised and enlarged. With illustrations. 12mo., cl. London, 1893.....$1.50

SLOANE, T. O'CONNOR.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of Its Practical Application in every day life. Illustrated.....$1.00

SLOANE, T. O'CONNOR.—The Standard Electrical Dictionary. A popular dictionary of words and terms used in the practice of electrical engineering. 350 illustrations.....$3.00

SLOANE, T. O'CONNOR.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys.....$1.00

SLOANE, T. O'CONNOR.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

STEVENS, H. G.—Mechanical Catechism. For Stationary and Marine Engineers, Firemen, Electricians, Motormen, Ice Machine Men and Mechanics in General. 336 pages, over 240 illustrations. Cloth.....$1.00

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. A series of lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66).....$0.50

THOMPSON, SYLVANUS P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of.....$3.50

THOMPSON, SYLVANUS P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75).....$0.50

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. Eighth edition, revised and rewritten. Numerous illustrations and 19 plates. Nearly 1,000 pages.....$6.00

THURSTON, PROF. R. H.—Stationary Steam Engines, Especially Adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates.....$2.50

TREVERT.—How to Make Electric Batteries at Home. Illustrated.....$0.25

URQUHART.—Electro-Plating. A Practical Hand Book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions.....$2.00

WALKER, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98).....$0.50

WEBB, H. L.—A Practical Guide to the Testing of Insulated Wires and Cables. Illustrated.....$1.00

WEBB, HERBERT LAWS.—Telephone Hand Book. Illustrated. 12mo., cloth. Chicago, 1895.....$1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

WEBER.—The Handy Vest Pocket Electrical Dictionary. Cloth.....$0.25
Leather.....$0.50

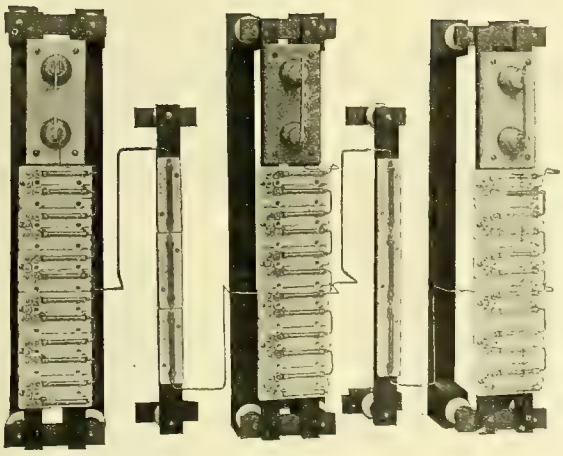
GENERAL ELECTRIC COMPANY'S
Multiplex Arresters


PROTECT ALTERNATING CIRCUITS AGAINST LIGHTNING AND ALL EXCESSIVE VOLTAGES.
Alternating circuits are more frequently subjected to abnormally high voltage strains than is generally recognized.
These strains may be due to surgings—the sudden opening or closing of switches—resonance or capacity effects—static charges—lightning.
The General Electric Multiplex Arrester not only protects against lightning, but acts equally well as a safety valve to discharge any excessive voltage accumulations.
Write to the nearest General Electric Office for information on this new and important device.

EDWARDS AND CO

The R. E.-A. L. Monitor Bell. (Patented.)

Hammer rod supported in two places and thrown straight out and in by the armature, striking gong on inside, near edge, thus giving a full, clear tone.

All springs made of Phosphor Bronze and so formed that there is least possible strain.

Contacts are platinized, adjustment is made by pressure on the standard which supports one contact. No screws or nuts being used in the adjustment, bell does not get out of order by operation.

Ordinarily the weak point is the pivot, the unreliable one the adjusting screw and nut. As these defects have been eliminated, this bell will stand hard usage and operate under adverse conditions.

The hammer entirely concealed by gong and cannot be tampered with.

It is especially adapted for use on street cars, as in addition to the advantages mentioned, it is dust, insect and moisture proof.

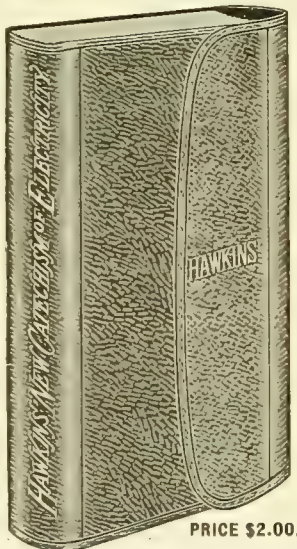
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

HARTFORD STEAM BOILER INSPECTION AND INSURANCE CO. HARTFORD, CONN.

A BOOK OF MERIT
MODERN ELECTRIC RAILWAY MOTORS.
BY GEO. T. HANCHETT, M. E.
FIRST PRACTICAL WORK ON RAILWAY MOTORS.
CONTENTS.—Chapter I.—Forms of Field Magnets. II.—Armature Winding Diagrams. III. Field Coil Construction and Arrangement. IV.—Armature Construction. V.—Commutator and Brush Holder Construction. VI.—Motor Casings. VII. Motor Suspensions. VIII.—Bearings and Gears. IX. Lubrication X.—General Dimensions and Data. XI.—Management and Repair. XII.—Railway Motor Design.
200 Pages. 157 Illustrations and Table. Price $2.00.
THIS is a book unique in its treatment of electric railway equipment. The first ten chapters are devoted to minute description of the details of electric railway motors that are in use to-day. Each organ of an electric railway motor is taken up in turn, described and illustrated by examples of present and past practice, and its operation explained in the light of practical experience. In short, the review of current practice is of such a nature as to bring out the reason why the electric railway motor is built as it is to-day. For example, field magnets of different types of motors are illustrated and compared, and their features of merit and faults pointed out. Armatures, armature windings, brush holders, suspensions and other details are similarly treated, each detail, however minute, being exhaustively considered. The last two chapters are devoted, one to the management and repair of electric railway motors, and the other to railway motor design, a complete design being worked out as an example. A table gives authoritative data of all types of railway motors in common use, both in America and Europe. **Sent postpaid on receipt of price.**

SAMSON TURBINE
The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

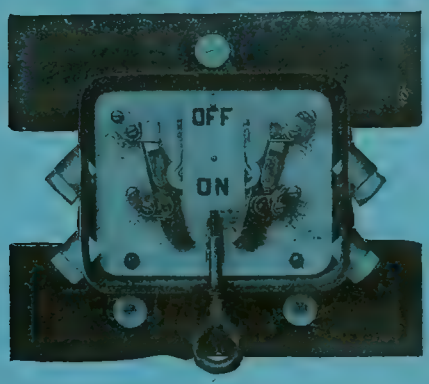
FORT WAYNE ELECTRIC WORKS

"WOOD" LIGHTING AND POWER SYSTEMS

Arc Circuit Cut-Outs



These cut-outs are designed for use on direct or alternating current series circuits of any voltage to control circuits of not over 2,500 volts.

They are exceptionally durable. In a life test one of these cut-outs was operated ten hours by a wheel and crank opening and closing a 2,500-volt 9.6-ampere circuit over 50,000 times with no evidence of injury or depreciation.

During the many years they have been in use no demand has been made for repair parts.

These "Wood" arc circuit cut-outs have been specified by the Insurance Bureau of the Louisiana Purchase Exposition for all World's Fair work.

Described in Bulletin No. 1042, sent free on request.

SACHS TRADE NOARK MARK FUSE

EXTRACT FROM REPORT OF

Test of 15,000-Volt, 30-Amp.

SACHS "NOARK" FUSES

AT ONE OF THE

Largest High Potential Transmission Plants

"TWO 750-KILOWATT TRANSFORMERS: COLD FUSE PLACED DIRECT ACROSS TRANSFORMER TERMINALS.

"***FIRST***—Blew in a fraction of a second, without noise or apparent strain, tube not more than perceptibly heated.

"***SECOND***—Blew as No. 1, except that there was indication (in sound of generator) that the current made again for an instant after the first interruption, and a very slight discharge through vent holes in end of tube.

"***THIRD***—One generator was removed, leaving only one. Fuse blew quietly and with no sign of strain in about one second.

"You will note from the above that the performance was quite satisfactory, and we will be pleased to have you advise us how soon we may expect shipment of the completed fuses and fuse blocks for our complete installation."

If you are looking for a safe and accurate Protective Device for similar service, let us do the same for you.

SACHS "NOARK" FUSES

5,000 - - 20,000 Volts

QUALITY

SELF STARTERS

Start and stop automatically through the actuation of a single switch, which also may be automatically operated. For use in connection with elevators motor-driven pumps, cranes, etc.

Listed to 150 H. P.
Built to 750 H. P.

We also list a full line of float switches, pressure regulators, etc., and can meet practically any requirement in this line.

THE FESSENDEN WIRELESS TELEGRAPH SYSTEM

The National Electric Signalling Company has brought suit in the United States Circuit Court, Southern Dist. of New York, U. S. A., against the DeForest Wireless Telegraph Company, the American DeForest Company, Abraham White, president of said companies, and Lee DeForest, Scientific Director, for infringement of Letters Patent of the United States of America Reissue, No. 12,115 of May 26, 1903, to Reginald A. Fessenden. This patent is for the well-known Fessenden liquid barreter or receiver for wireless telegraphy, the monopoly of which is controlled by the National Electric Signalling Company, Washington, D. C., U. S. A.

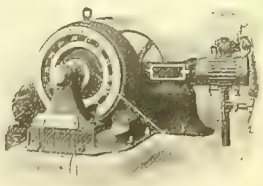
Warren
Alternator



Very little attention has been paid to decorating the machine with fancy ornaments and a great deal of thought has been put into making the machine durable; it impresses one with its simplicity and capacity for severe exacting service.
No commutator, no moving wire, no trouble.
As an investment, they are gilt-edged securities.
They are "seven league boots" in the chase for the almighty dollar

BITUMINIZED FIBER CONDUIT
(PATENTED)

Electrolysis-proof and impervious to moisture and gas.

A smooth laminated insulator withstanding 50,000 volts a.c., made on electrical lines and cannot scratch the cables.

It is of unchanging durability, proof against all forms of corrosion or decay.

More enduring than granite.

The bitumen of asphaltum and coal deposits have remained unchanged in the ground for thousands of years.

Made in seven-foot lengths of all diameters from one inch to ten inches.

It is also the cheapest, as it saves 60 per cent. of transporting and handling cost and 20 per cent. of subway construction.

For illustrated books, prices and information apply to

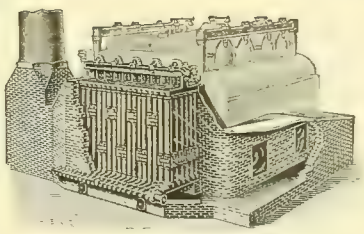
PITTSBURG, KAN.

Branch Office and Sale Yard: 2417 East 18th Street, KANSAS CITY, MO.



In supplying boilers with hot purified water, thus keeping a larger heating surface, as well as meeting sudden demands for power, the

GREEN'S ECONOMIZER

is but beginning its savings to plant owners. What has been, and possibly will again be—cost of fuel—one of the greatest expenses of a plant, is reduced from 10 to 20 per cent. ELECTRIC LIGHT AND POWER PLANTS having a Green's Economizer realize the greatest saving. We will be pleased to send our free booklet showing construction and how applied.

DECISION IN FAVOR OF BRYANT SOCKETS

In August last the United States Circuit Court in Philadelphia sustained the Lange lamp socket patent No. 434,153, and granted an injunction against the defendants in the suit of the Bryant Electric Company against J. F. Buchanan and Company, selling the New England sockets. The New England Electric Manufacturing Company, who defended the suit, took an appeal to the United States Circuit Court of Appeals for the Third Circuit. That Appellate Court has now handed down an opinion affirming the decree of the Court below, sustaining the patent and granting an injunction.

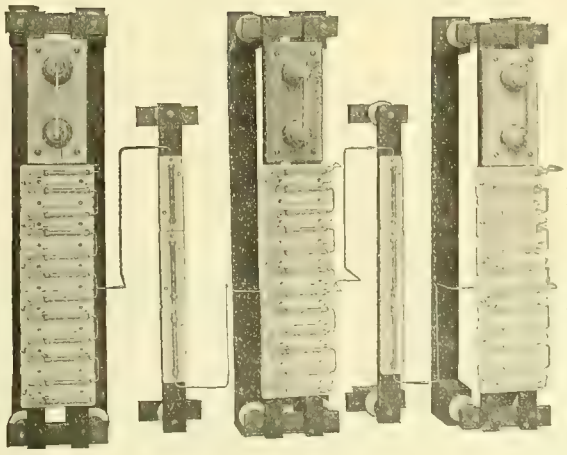
This Lange patent covers the mode of fastening the cap, shell and insulation together, which is recognized as the standard.

THE BRYANT ELECTRIC COMPANY

BRIDGEPORT, CONNECTICUT. CHICAGO, ILLINOIS.

GENERAL ELECTRIC COMPANY'S

Multiplex Arresters



PROTECT ALTERNATING CIRCUITS AGAINST LIGHTNING AND ALL EXCESSIVE VOLTAGES.

Alternating circuits are more frequently subjected to abnormally high voltage strains than is generally recognized.

These strains may be due to surgings—the sudden opening or closing of switches—resonance or capacity effects—static charges—lightning.

The General Electric Multiplex Arrester not only protects against lightning, but acts equally well as a safety valve to discharge any excessive voltage accumulations.

Write to the nearest General Electric Office for information on this new and important device.

GENERAL OFFICES: SCHENECTADY, N. Y.

Chicago Office: Monadnock Block. Sales Offices in all Large Cities.

BIG MONEY FOR DEALERS

in Zenith lamps (2 watts per c. p.). Quick and ready sales, satisfactory to the dealer and consumer.

The Zenith lamp is an incandescent lamp with all its simplicity, fitting any standard key or keyless, Edison or T.-H. base socket. Made in 25 c. p., 60 watts, and 55 c. p., 120 watts. Life is about the same as regular 3.5 watt incandescent.

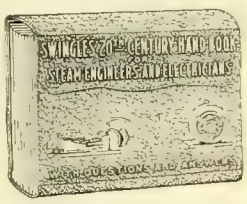
Three Extraordinary Books for Engineers and Electricians.

JUST FROM THE PRESS : : : New and Up to Date.

Written by Practical Engineers and Electricians in a language even a child can understand.

The 20th Century Hand Book for Engineers and Electricians.



A compendium of useful knowledge appertaining to the care and management of Steam Engines, Boilers and Dynamos. Thoroughly practical with full instructions. By C. F. SWINGLE, M. E. Formerly Chief Engineer of the Pullman Car Works. Late Chief Engineer of the Illinois Car and Equipment Co., Chicago.

ELECTRICAL DIVISION. The electrical part of this valuable volume was written by a practical engineer for engineers, and is a clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Storage Batteries, Indicators and Measuring Instruments.

Swingle's 20th Century Hand Book for Engineers and Electricians. Over 300 illustrations. Handsomely bound in full leather pocket book style. Size, 5x6¾x1 inch thick. PRICE NET, $2.50.

Dynamo Tending for Engineers, Or, Electricity for Steam Engineers,

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY, authors of "Modern Wiring Diagrams and Descriptions for Electrical Workers." This excellent treatise is written by engineers for engineers. The authors have had the co-operation of the best authorities, each in his chosen field, and the information given is just such as a steam engineer should know. To further this information, and to more carefully explain the text, nearly 100 illustrations are used, which, with perhaps a very few exceptions, have been especially made for this book. It teaches just what the steam engineer should know in his engine room about electricity. 12mo, cloth, 100 illustrations. Size 5¼x7¾. PRICE NET, $1.50.

The most important book on Electrical Construction Work ever issued. Modern

Wiring Diagrams and Descriptions for Electrical Workers.

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY.

This grand little volume not only tells you how to do it, but it shows you

This book tells how to wire for call and alarm bells.
For burglar and fire alarm.
How to run bells from dynamo current.
How to install and manage batteries.
How to test batteries.
How to test circuits.
How to wire for annunciators, for telegraph, telephone and gas lighting.
It tells how to locate "trouble" and "ring out" circuits.
It tells about meters and transformers.
It contains 30 diagrams of electric lighting circuits alone.
It explains dynamos and motors, alternating and direct current.
It gives 10 diagrams of ground detectors alone.
It gives "Compensator" and Storage Battery installation.
It gives simple and explicit explanation of the "Wheatstone Bridge" and its uses as well as volt meter and other testing.

It gives a new and simple writing table covering all voltages and all losses or distances, etc.

160 pages. Over 200 illustrations. Full leather binding. Round corners. Red edges. Pocket size, 4 x 6. Price net, $1.50.

Each book sent charges paid to any address upon receipt of price. Your money returned if the books are not as represented.

Publishers of Self-Educational Books for Mechanics. Madison and Franklin Sts., Chicago, U. S. A.

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED.

By young married electrician, eight years' experience in lighting and power; understands business thoroughly; an energetic and hustling superintendent. Understands repairing of armatures, meters, arc lamps, transformers, care of engines and boilers, and an up-to-date, all-around plant man. BOX 321, care of Western Electrician.

POSITION WANTED.

Young man of 25, with two years' experience as electrician in large manufacturing plant, having care of D. C. equipment, wiring, etc. Student of the International Correspondence School. Good references. Address BOX 314, care Western Electrician, 510 Marquette Bldg., Chicago.

POSITION WANTED.

By good telephone trouble man, with five years' experience clearing line, instrument and switchboard trouble, both central energy and ring down. Capable of running jumpers and handling trouble desk in large exchange. One year's experience in electric light and motor work. Willing to go anywhere. Address BOX 323, care Western Electrician, 510 Marquette Bldg., Chicago.

POSITION WANTED.

By a young married man, with lighting and power company or with some company using electric motors for power purposes, to install and repair motors, general wiring, etc. Three years' experience repairing and winding fields and armatures. Never use liquor or tobacco. A1 references. Address BOX 326 care Western Electrician, 510 Marquette Building, Chicago.

WANTED.

An operator in a water power electric light plant about 80 miles from Chicago. Must be familiar with water wheels, A. C. and D. C. electrical apparatus, both arc and incandescent. Work shift of two weeks nights and two weeks days. An excellent opportunity for a sober, steady and competent married man. Salary $60. All vacancies in line of promotion are filled by employes. Address BOX 320, care of Western Electrician.

WANTED.

Three experienced incandescent lamp salesmen, by an old and well-established company not in the trust. Applicants will please state age, experience and salary wanted. Address BOX 199, care Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

Salesmen to sell line of popular-priced electric, gas and combination fixtures. May be handled as side line. State experience and territory traveled. NATIONAL STAMPING & ELECTRIC WORKS, 118 Michigan Street, Chicago.

WANTED.

200 to 400 kilowatt two phase alternator, 60-cycle, 2,300 volts, direct connected to compound engine. Must be standard apparatus in first-class condition. Address BOX No. 318, care Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

Position by first-class lineman and wireman; have 8 years' practical experience in central station work, wiring, repairing arc lamps, etc. Can furnish good reference as to ability and character. Address BOX 324, care Western Electrician, 510 Marquette Building, Chicago.

FOR SALE

10-kilowatt direct connected set.

Vertical automatic engine, 110-volt multipolar generator, brand new, high grade, at 15% below cost.

GOLTZ ENGINEERING CO.
127 Fulton St. - CHICAGO

FOR SALE.

Motor—6 H. P., 220 volts, speed 675. Motor—10 H. P., 220 volts, speed 1,250. Dynamo—85-light, 110 volts. These machines are almost new. DELIVOUX & GEORGE, 133 S. Clinton St., Chicago.

FOR SALE.

In a good town of 4,000 population, the county seat of county in Iowa; electric light plant in good condition; has city lighting contract and franchise; has an extra engine and dynamo and coal sheds for local trade. Plant is on paying basis. Address BOX 322, care of Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE.

Electric light and power plant in a western town of 8,000 inhabitants; operated by water power. Valuable franchise and contracts. Fine field for expansion. Net income fully ten per cent. Price $60,000 cash. For information address BOX 315, care Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE.

Telephone engineering course in International Correspondence Schools. Price $20. Address BOX 325, care Western Electrician, 510 Marquette Building, Chicago.

FOR RENT.

Two fine floors for manufacturing purposes, heat, electric light, power and elevator service furnished. Floors contain 11,500 feet each, light four sides. An ideal place for manufacturers of telephones or accessories. Plenty of labor can be had cheap. Address E. J. NOBLETT CO., 121st and Peoria Sts., West Pullman, Chicago, Ill.

A PRACTICAL BOOK

FOR PRACTICAL MEN

"MODERN WIRING DIAGRAMS AND DESCRIPTIONS FOR ELECTRICAL WORKERS."

By Henry C. Horstmann and Victor H. Tousley. 160 pages, over 200 illustrations. Full leather binding, red edges. Pocket size 4 x 6. Price, net, $1.50.

A work that not only tells you how to do it, but shows you.

THIS BOOK tells how to wire for call and alarm bells. For burglar and fire alarm. How to run bells from dynamo current. How to install and manage batteries. How to test batteries. How to test circuits. How to wire for annunciators, for telegraph and gas lighting. It tells how to locate "trouble" and "ring out" circuits. It tells about meters and transformers. It contains 30 diagrams of electric lighting circuits alone. It explains dynamos and motors; alternating and direct current. It gives 10 diagrams of ground detectors alone. It gives "Compensator" and Storage Battery installation. It gives simple and explicit explanations of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing. It gives a new and simple wiring table, covering all voltages and all losses or distances, etc., etc.

A BOOK OF MERIT
MODERN ELECTRIC RAILWAY MOTORS.
BY GEO. T. HANCHETT, M. E.
FIRST PRACTICAL WORK ON RAILWAY MOTORS.
CONTENTS.—Chapter I.—Forms of Field Magnets. II.—Armature Winding Diagrams. III.—Field Coil Construction and Arrangement. IV.—Armature Construction. V. Commutator and Brush Holder Construction. VI.—Motor Casings. VII.—Motor Suspensions. VIII.—Bearings and Gears. IX.—Lubrication. X. General Dimensions and Data. XI.—Management and Repair. XII.—Railway Motor Design.
200 Pages. 157 Illustrations and Table. Price $2.00.
THIS is a book unique in its treatment of electric railway equipment. The first ten chapters are devoted to minute description of the details of electric railway motors that are in use to-day. Each organ of an electric railway motor is taken up in turn, described and illustrated by examples of present and past practice, and its operation explained in the light of practical experience. In short, the review of current practice is of such a nature as to bring out the reason why the electric railway motor is built as it is to-day. For example, field magnets of different types of motors are illustrated and compared, and their features of merit and faults pointed out. Armatures, armature windings, brush holders, suspensions and other details are similarly treated, each detail, however minute, being exhaustively considered. The last two chapters are devoted, one to the management and repair of electric railway motors, and the other to railway motor design, a complete design being worked out as an example. A table gives authoritative data of all types of railway motors in common use, both in America and Europe. **Sent postpaid on receipt of price.**

SAMSON TURBINE
The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

Standard Electrical Dictionary.

BY PROF. T. O'CONOR SLOANE.
Author of "Arithmetic of Electricity," "Electricity Simplified," "Electric Toy Making," Etc.
682 Pages, 393 Illustrations. Handsomely bound in cloth, 8vo, $3.
An Entirely New Edition, Brought Up to Date and Greatly Enlarged.
COMPLETE—CONCISE—CONVENIENT.

In publishing the "Standard Electrical Dictionary," the author has adhered to what the work purports to be, exhausting the subject of electrical terms, giving each title the clearness of explanation necessary to make the understanding of it complete without unnecessary elaboration. In this work, every electrical word, term, or phrase will be found intelligently defined.
A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.
The work is absolutely indispensable to all in any way interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact, it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

SOMETHING NEW
IN METERS

An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switcharm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

By A. E. DOBBS.

Full of information and diagrams for the operator, exchange owner, exchange manager, inspector, trouble man, lineman.

A complete description of telephones and their troubles. How to find and remedy them, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

This is a practical book, written in **plain language**, and for **anyone** interested in telephony.

Mailed anywhere on receipt of price . . . **ONE DOLLAR.**

No technicalities. Substantially bound in cloth.

"WOOD" LIGHTING AND POWER SYSTEMS

High-Grade Arc Lamps

When a man buys a high-grade arc lamp he knows what he is paying for as well as what he is to receive. He pays for the best that experienced engineers and skilled workmen can design and build. He receives a healthy arc lamp. Service is a tonic and once in operation the lamp requires no nurses or nostrums. It serves a long useful life and repays its cost many fold.

Form C "Wood" enclosed arc lamps have established for themselves the title of High-Grade Arc Lamps. Made for all circuits and locations, but only in the high-grade quality.

Three Extraordinary Books for Engineers and Electricians.

JUST FROM THE PRESS : : : New and Up to Date.

Written by Practical Engineers and Electricians in a language even a child can understand.

The 20th Century Hand Book for Engineers and Electricians.

A compendium of useful knowledge appertaining to the care and management of Steam Engines, Boilers and Dynamos. Thoroughly practical with full instructions. By C. F. SWINGLE, M. E., Formerly Chief Engineer of the Pullman Car Works, Late Chief Engineer of the Illinois Car and Equipment Co., Chicago.

ELECTRICAL DIVISION. The electrical part of this valuable volume was written by a practical engineer for engineers, and is a clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Storage Batteries, Indicators and Measuring Instruments.

Swingle's 20th Century Hand Book for Engineers and Electricians. Over 300 illustrations. Handsomely bound in full leather pocket-book style. Size, 5x6¾x1 inch thick. PRICE NET, $2.50.

Dynamo Tending for Engineers, Or, Electricity for Steam Engineers,

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY, authors of "Modern Wiring Diagrams and Descriptions for Electrical Workers." This excellent treatise is written by engineers for engineers. The authors have had the co-operation of the best authorities, each in his chosen field, and the information given is just such as a steam engineer should know. To further this information, and to more carefully explain the text, nearly 100 illustrations are used, which, with perhaps a very few exceptions, have been especially made for this book. It teaches just what the steam engineer should know in his engine room about electricity. 12mo, cloth, 100 illustrations. Size 5⅛x7¾. PRICE NET, $1.50.

The most important book on Electrical Construction Work ever issued. Modern

Wiring Diagrams and Descriptions for Electrical Workers.

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY.

This grand little volume not only tells you how to do it, but it shows you.

This book tells how to wire for call and alarm bells.
For burglar and fire alarm.
How to run bells from dynamo current.
How to install and manage batteries.
How to test batteries.
How to test circuits.
How to wire for annunciators for telegraph, telephone and gas lighting.
It tells how to locate "trouble" and "ring out" circuits.
It tells about meters and transformers.
It contains 30 diagrams of electric lighting circuits alone.
It explains dynamos and motors, alternating and direct current.
It gives 10 diagrams of ground detectors alone.
It gives "Compen-ator" and Storage Battery installation.
It gives simple and explicit explanation of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing.
It gives a new and simple writing table covering all voltages and all losses or distances, etc.

160 pages. Over 200 illustrations. Full leather binding. Round corners. Red edges. Pocket size, 4 x 6. Price net, $1.50.

Each book sent charges paid to any address upon receipt of price. Your money returned if the books are not as represented.

BITUMINIZED FIBER CONDUIT.

FOR ELECTRICAL UNDERGROUND CONSTRUCTION.

ELECTROLYSIS PROOF—WATERPROOF.

(COPY.) General Electric Company,
San Francisco Office, Crossley Bldg.,
March 19, 1904.

Mr. George H. Barker, Vice-President,
American Conduit Co.,
170 Broadway, New York, N. Y.

Dear Sir:—

We have used the Bituminized Fiber Conduit for ducts in many high potential stations and consider it an ideal conduit for high potential work.

The conduit can be made absolutely waterproof and is easy to handle, and possesses in itself an extremely high insulation.

We have recommended it to all our customers for this class of work.

Yours very truly,
(signed) J. A. Lighthipe,
Engr. San Francisco Office.

A smooth laminated insulator of unchanging durability.

Forms a continuous sealed duct from manhole to manhole, impervious to moisture and through which leaking gas cannot penetrate.

There has never been a gas explosion in our conduits, nor the slightest evidence of electrolysis.

Abrasion of the cables is an impossibility.

It saves sixty per centum of freight and handling cost and twenty to thirty-five per centum of construction cost.

Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.

All sizes from one inch to ten inches interior diameter. Bends of all angles.

The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

YOST SOCKETS INFRINGE PERKINS PATENT

THE United States Circuit Court for the Eastern District of Pennsylvania has handed down an opinion sustaining the Perkins Socket Patent No. 626,927, against the Yost Socket in the suit of the Perkins Electric Switch Mfg. Co. against J. F. Buchanan & Co. The Court has directed the issuance of an injunction against the defendants, selling the Yost sockets, and the case is to be referred to a master to ascertain profits and damages to be awarded to the complainant. :: :: :: ::

A copy of this decision will be mailed upon receipt of a request to

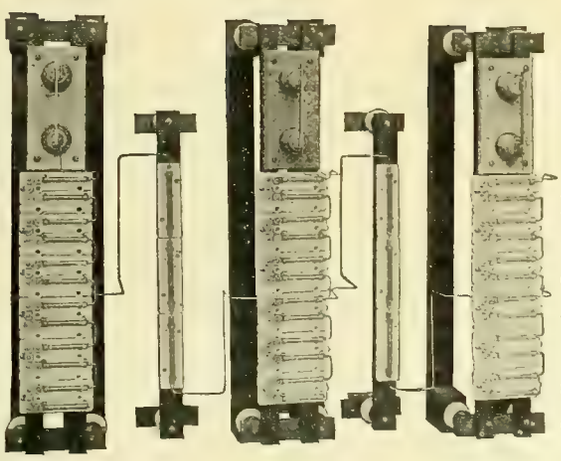
JONES PERPETUAL LEDGER CO., Suite 545 N.Y. Life Bldg., CHICAGO.

GENERAL ELECTRIC COMPANY'S

Multiplex Arresters



PROTECT ALTERNATING CIRCUITS AGAINST LIGHTNING AND ALL EXCESSIVE VOLTAGES.

Alternating circuits are more frequently subjected to abnormally high voltage strains than is generally recognized.

These strains may be due to surgings—the sudden opening or closing of switches—resonance or capacity effects—static charges—lightning.

The General Electric Multiplex Arrester not only protects against lightning, but acts equally well as a safety valve to discharge any excessive voltage accumulations.

Write to the nearest General Electric Office for information on this new and important device.

GENERAL OFFICES: SCHENECTADY, N. Y.

Chicago Office: Monadnock Block. **Sales Offices in all Large Cities.**

GUESS??

To SHOW them is to SELL them. To SEE them is to BUY. Zenith lamps, of course. That's easy. If you don't believe it come round to our store and have a look at them. Or send us an order and have the pleasure of seeing them under your own vine and fig tree. We have a large stock in all the standard voltages.

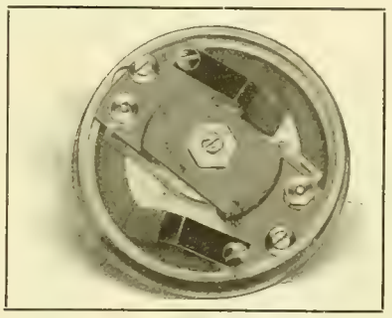
Stromberg - Carlson TRANSMITTER

Inside View

The inside looks as well as the outside and everybody who has seen the outside says it's the best looking transmitter on the market.

Of course the real way to judge of its quality is to try one or one hundred, but they are all alike.



A well-known company says: "We are going to use your transmitter exclusively for long-distance work." It must be true for they back it up with a nice large order.

We mail printed matter upon request.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

THE BEST ANSWER TO A QUESTION

On Wiring, can be found in the New Book,

"WIRING TABLES,"

"How They are Made and How to Use Them."
BY THOS. C. CRIER.

Whenever you are asked a question on Wiring, refer the questioner to this book, and he will find what he desires.

THE BOOK CONTAINS: The Law of Resistance, Electromotive Force and Current Fully Explained. How to Calculate the Size of Wires. The Different Methods of Wiring, with Diagrams. How to Apply the Simple Formula, in Calculating the Size of Wires Under all Conditions. Diagrams for Wiring 3 Point, 4 Point, Head Light and Heat Regulating Switches.
27 TABLES ON WIRING AND VALUABLE DATA.

Ohm's law is described in such plain and simple language that one cannot fail to clearly understand it.

Bound in Cloth, 80 Pages, Size 5x7½ In. Sent, prepaid, on receipt of price, $1.00.

ANNOUNCEMENT

To Users of Incandescent Lamps

We are advised that circulars are being sent out by competing companies to certain dealers alleging that lamps not of their manufacture infringe certain patents. We desire to assure you that we will at our own expense defend any or all suits or proceedings that may be instituted against you for the infringement, or alleged infringement of any patent or patents by reason of the sale or use of any of the Sawyer-Man incandescent lamps, provided you will kindly notify us in writing of the institution of suit or proceedings, in order to permit our counsel to act effectively.

The Sawyer-Man Electric Company is one of the oldest electric companies in this country engaged in the manufacture of incandescent lamps and the owner of a number of basic patents under which other companies are manufacturing lamps.

In this connection we wish to advise you that recent important developments in the art of incandescent lamp making enable this company to place upon the market at this time lamps possessing mechanical and electrical features which are superior to the product of any other company.

Sawyer-Man Electric Company

510-530 WEST 23rd STREET, NEW YORK

SOMETHING NEW
IN METERS

An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switcharm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

DUNCAN ELECTRIC MANUFACTURING CO.,

LA FAYETTE, IND., U. S. A.

The Inspector
AND
Trouble Man.
By A. E. DOBBS.

Full of information and diagrams for the operator, exchange owner, exchange manager, inspector, trouble man, lineman.

A complete description of telephones and their troubles. How to find and remedy them, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

This is a practical book, written in **plain language,** and for **anyone** interested in telephony.

Mailed anywhere on receipt of price . . . ONE DOLLAR.

No technicalities. Substantially bound in cloth.

WESTERN ELECTRICIAN'S

WORLD'S FAIR NUMBER.

AS the only electrical journal in the West the WESTERN ELECTRICIAN has taken particular interest in the development of and preparations for the Louisiana Exposition in St. Louis. We have published from time to time accounts of the great work in progress to make this exposition the largest and most successful ever held. In pursuance of this object we have already published more about the electrical and allied features of the exposition than any other electrical paper.

But now that the opening of the exposition is near at hand we have determined to publish a special St. Louis Exposition Number. This number will be dated April 16th, and preparations for it have been under way for some time. A well-trained, enterprising representative is on the ground gathering the necessary material, and the various features of this special number will give the reader in an especially attractive way a good idea of the general scope of the exposition, with particular emphasis on the electrical and mechanical features. We hope to present data which among other things will serve as a guide to all who may desire to know what visitors may expect to see at the exposition.

The shrewd advertiser will readily see that this will be a most valuable and important number, as it will be kept and constantly referred to. Your best business interests, therefore, demand a representation in the advertising columns of this number, and we hope to receive your order and copy for a large attractive announcement by first mail. This number will be distributed at the opening of the Exposition.

ALMOST READY FOR THE PRESS.

Last Form Closes April 13th.

Fessenden Wireless Telegraph System

THE NATIONAL ELECTRIC SIGNALLING CO.

As the result of five years' experimental work, including a working test of a full year, this system is now put on the market as being equal as regards speed and reliability to manually operated wire lines, and superior as regards first cost and maintenance.

This system uses no coherer, the receiver consisting of a minute cylinder of liquid whose resistance is lowered by the heating effect of the electric waves. As it is approximately twenty-five to fifty times as sensitive as the Solari coherer, and is admirably adapted to sharp tuning, much less energy is needed for a given distance, and difficulties from atmospheric disturbances and interference can be overcome.

This system does not infringe the patents of any other company and the operation of the apparatus is guaranteed.

Telegraphic sets for working up to 150 miles over land or up to 350 miles over sea are now standardized and can be supplied from stock or on short notice. Sets for working over longer distances supplied at short notice. Sets can be tested by purchaser before delivery between the company test stations, approximately ninety miles over land, or between the company's marine stations.

BITUMINIZED FIBER CONDUIT.

FOR ELECTRICAL UNDERGROUND CONSTRUCTION.

ELECTROLYSIS PROOF—WATERPROOF.

(Copy.) General Electric Company,
San Francisco Office, Crossley Bldg.,
March 19, 1904.

Mr. George H. Barker, Vice-President,
American Conduit Co.,
170 Broadway, New York, N. Y.

Dear Sir:—

We have used the Bituminized Fiber Conduit for ducts in many high potential stations and consider it an ideal conduit for high potential work.

The conduit can be made absolutely waterproof and is easy to handle, and possesses in itself an extremely high insulation.

We have recommended it to all our customers for this class of work.

Yours very truly,
(Signed) J. A. Lighthipe,
Engr. San Francisco Office.

A smooth laminated insulator of unchanging durability.

Forms a continuous sealed duct from manhole to manhole, impervious to moisture and through which leaking gas cannot penetrate.

There has never been a gas explosion in our conduits, nor the slightest evidence of electrolysis.

Abrasion of the cables is an impossibility.

It saves sixty per centum of freight and handling cost and twenty to thirty-five per centum of construction cost.

Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.

All sizes from one inch to ten inches interior diameter. Bends of all angles.

The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

EDISON ELECTRIC LIGHT COMPANY
SCHENECTADY, N. Y.

YOST SOCKETS
DO NOT INFRINGE PERKINS PATENT.

To our Customers, Purchasers and Sellers of Yost Sockets:

The notice in the latest numbers of the Electrical Trade Papers over the name of the PERKINS ELECTRIC SWITCH MFG. CO., entitled respectively, "YOST SOCKETS INFRINGE PERKINS PATENT" and "PERKINS PATENT SUSTAINED AGAINST SELLERS OF YOST SOCKETS", is misleading and unwarranted by the facts.

The decision of the Circuit Court for the Eastern District of Pennsylvania, in the suit of the Perkins Electric Switch Mfg. Co. against J. F. Buchanan & Co. does not enjoin the selling of the Yost Socket; but on the contrary relates to socket known as the Dixon, manufactured by The Yost-Miller Company. The sockets manufactured and sold by THE YOST ELECTRIC MFG. CO. are essentially different in construction from the Dixon Socket which was involved in the suit referred to, and does not, as we have been advised by counsel, infringe any of the claims of the Perkins Patent. No such socket as that manufactured and sold by us has ever been brought to the attention of any court by judicial proceedings.

We give notice that we will fully protect all purchasers of sockets manufactured and sold by us and that we shall hold the Perkins Electric Switch Mfg. Co. responsible for any and all damages sustained by us following from any mis-statement of facts contained in the publications herewith referred to.

THE YOST ELECTRIC MFG. CO.,
TOLEDO, OHIO.

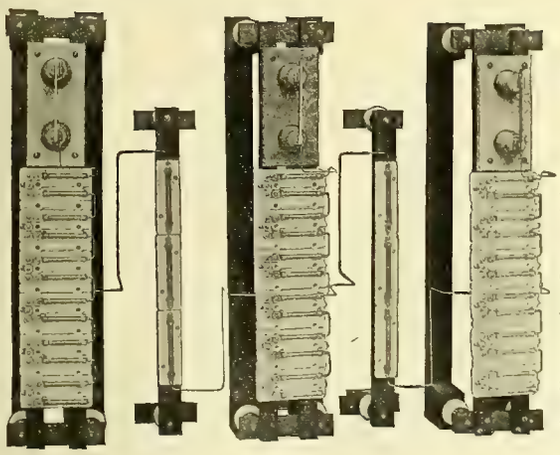
GENERAL ELECTRIC COMPANY'S

Multiplex Arresters



PROTECT ALTERNATING CIRCUITS AGAINST LIGHTNING AND ALL EXCESSIVE VOLTAGES.

Alternating circuits are more frequently subjected to abnormally high voltage strains than is generally recognized.

These strains may be due to surgings—the sudden opening or closing of switches—resonance or capacity effects—static charges—lightning.

The General Electric Multiplex Arrester not only protects against lightning, but acts equally well as a safety valve to discharge any excessive voltage accumulations.

Write to the nearest General Electric Office for information on this new and important device.

GENERAL OFFICES: SCHENECTADY, N. Y.

Chicago Office: Monadnock Block. Sales Offices in all Large Cities.

GUESS??

To SHOW them is to SELL them. To SEE them is to BUY. Zenith lamps, of course. That's easy. If you don't believe it come round to our store and have a look at them. Or send us an order and have the pleasure of seeing them under your own vine and fig tree. We have a large stock in all the standard voltages.

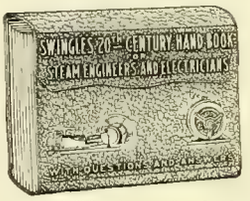
Three Extraordinary Books for Engineers and Electricians.

JUST FROM THE PRESS : : : New and Up to Date.

Written by Practical Engineers and Electricians in a language even a child can understand.

The 20th Century Hand Book for Engineers and Electricians.



A compendium of useful knowledge appertaining to the care and management of Steam Engines, Boilers and Dynamos. Thoroughly practical with full instructions. By C. F. SWINGLE, M. E. Formerly Chief Engineer of the Pullman Car Works. Late Chief Engineer of the Illinois Car and Equipment Co., Chicago.

ELECTRICAL DIVISION. The electrical part of this valuable volume was written by a practical engineer for engineers, and is a clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Storage Batteries, Indicators and Measuring Instruments.

Swingle's 20th Century Hand Book for Engineers and Electricians. Over 300 illustrations. Handsomely bound in full leather pocket-book style. Size, 5x6¾x1 inch thick. PRICE NET, $2.50.

Dynamo Tending for Engineers, Or, Electricity for Steam Engineers,

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY, authors of "Modern Wiring Diagrams and Descriptions for Electrical Workers." This excellent treatise is written by engineers for engineers. The authors have had the co-operation of the best authorities, each in his chosen field, and the information given is just such as a steam engineer should know. To further this information, and to more carefully explain the text, nearly 100 illustrations are used, which, with perhaps a very few exceptions, have been especially made for this book. It teaches just what the steam engineer should know in his engine room about electricity. 12mo, cloth, 100 illustrations. Size 5¼x7¾. PRICE NET, $1.50.

The most important book on Electrical Construction Work ever issued. Modern

Wiring Diagrams and Descriptions for Electrical Workers.

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY.

This grand little volume not only tells you how to do it, but it shows you.

This book tells how to wire for call and alarm bells.
For burglar and fire alarm.
How to run bells from dynamo current.
How to install and manage batteries.
How to test batteries.
How to test circuits.
How to wire for annunciators, for telegraph, telephone and gas lighting.
It tells how to locate "trouble" and "ring out" circuits.
It tells about meters and transformers.
It contains 30 diagrams of electric lighting circuits alone.
It explains dynamos and motors, alternating and direct current.
It gives 10 diagrams of ground detectors alone.
It gives "Compensator" and Storage Battery installation.
It gives simple and explicit explanation of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing.

It gives a new and simple writing table covering all voltages and all losses or distances, etc.

160 pages. Over 200 illustrations. Full leather binding. Round corners. Red edges. Pocket size, 4 x 6. Price net, $1.50.

Each book sent charges paid to any address upon receipt of price. Your money returned if the books are not as represented.

POSITION WANTED.

As superintendent of electric light or light and water plant, by young man with technical education and ten years' practical experience in construction, operation and management of lighting, power and water works plants. Address BOX 319, care Western Electrician, 510 Marquette Bldg., Chicago.

POSITION WANTED.

Young man (25) at present manager of power, lighting and waterworks plant, wishes change of locality and would like situation with some municipal plant or company. Steady. Good references. Address BOX 333, care Western Electrician, 510 Marquette Bldg., Chicago.

POSITION WANTED.

Young man, 26 years old, wants position in electrical plant; technical education, experience with A. C. and D. C. circuits, high and low speed engines, also large gas engines and storage batteries. At present manager of 350 K. W. 3-phase lighting plant; also water works. Open to position in 30 days. Address BOX 330, care Western Electrician 510 Marquette Building, Chicago.

WANTED.

Two or three men for care and operation of cranes and motors; also one or two men for all round electric light and telephone work. Address C. A. BARNEY, 732 Chestnut Street, Kewanee, Ill.

WANTED.

200 to 400 kilowatt two phase alternator, 60-cycle, 2,300 volts, direct connected to compound engine. Must be standard apparatus in first-class condition. Address BOX No. 318, care Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

Three experienced incandescent lamp salesmen, by an old and well-established company not in the trust. Applicants will please state age, experience and salary wanted. Address BOX 199, care Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

Position by first-class lineman and wireman; have 8 years' practical experience in central station work, wiring, repairing arc lamps, etc., Can furnish good reference as to ability and character. Address BOX 324, care Western Electrician, 510 Marquette Building, Chicago.

WANTED TO EXCHANGE.

Wanted, a secondhand engine, 90 h. p. or more, prefer Ideal or Armington & Sims. Will trade brick dwelling house, on corner lot; house 32x32 feet, two stories and basement. 8 rooms fitted with electric lights, good well, outhouses, and several kinds of fruit trees. Address E. E. SAYLES, Cullom, Ill.

FOR SALE.

To be sold, April 22, plant and rights of Pawnee El. Co. Corliss 16 in. x 26 in. engine; Stanley 90 K. W. alternator; poleline, station, etc. In good town, county seat, 3,000 pop., 6 blocks business, 2 railroads. Good opening for practical man with funds to make extensions or to put in combination ice and light plant. Address TRUSTEE, Box 194, Pawnee, Okla.

FOR SALE.

In a good town of 4,000 population, the county seat of county in Iowa; electric light plant in good condition; has city lighting contract and franchise; has an extra engine and dynamo and coal sheds for local trade. Plant is on paying basis. Address BOX 322, care of Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE.

An outfit consisting of one high-speed engine, 50 horsepower, one dynamo, 50-K. W., direct current, 250 volt, Akron Electric Co. make, one dynamo 28 K. W. same as above, one belt, one switchboard complete including lightning arresters, circuit-breaker, etc. Will sell complete or in part at a bargain. Reasons, are changing to alternating system. DEMING ICE AND ELECTRIC COMPANY, Deming, N. M.

FOR RENT.

Two fine floors for manufacturing purposes, heat, electric light, power and elevator service furnished. Floors contain 11,500 feet each, light four sides. An ideal place for manufacturers of telephones or accessories. Plenty of labor can be had cheap. Address E. J. NOBLETT CO., 121st and Peoria Sts., West Pullman, Chicago, Ill.

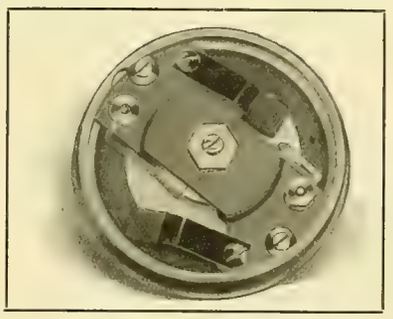
Stromberg - Carlson TRANSMITTER

Inside View

The inside looks as well as the outside and everybody who has seen the outside says it's the best looking transmitter on the market.
Of course the real way to judge of its quality is to try one or one hundred, but they are all alike.



A well-known company says: "We are going to use your transmitter exclusively for long-distance work." It must be true for they back it up with a nice large order.
We mail printed matter upon request.

SAMSON TURBINE
The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

SOMETHING NEW
IN METERS

An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switch arm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

BITUMINIZED FIBER CONDUIT

FOR ELECTRICAL UNDERGROUND CONSTRUCTION

Partial lengths of Bituminized Fiber Conduit photographed to show the ideal male and female joint, which insures perfect and permanent alignment, a waterproof joint without wrapping or cement plastering, and makes the laying of Bituminized Fiber Conduit a cheap and rapid process.

ELECTROLYSIS PROOF **WATER PROOF**

A smooth laminated insulator of unchanging durability.
Forms a continuous sealed duct from manhole to manhole, impervious to moisture, and through which leaking gas cannot penetrate.
There has never been a gas explosion in our conduits nor the slightest evidence of electrolysis.
Abrasion of the cables is an impossibility.
It saves 60 per centum of freight and handling cost and 20 to 35 per centum of construction.
Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.
All sizes from one inch to ten inches interior diameter. Bends of all angles.

The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

ALWAYS IN STOCK.

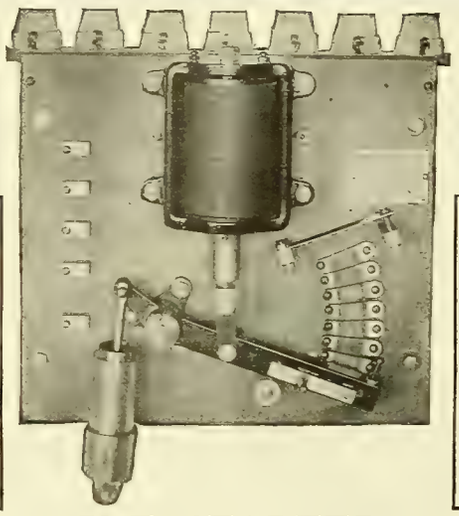
MANUFACTURED BY

G. E. Co.

CHICAGO EDISON COMPANY, 139 Adams Street. CHICAGO.

C H

QUALITY



QUALITY

SELF STARTERS

Start and stop automatically through the actuation of a single switch, which also may be automatically operated. For use in connection with elevators, motor-driven pumps, cranes, etc.

Listed to 150 H. P.
Built to 750 H. P.

We also list a full line of float switches, pressure regulators, etc., and can meet practically any requirement in this line.

Here
is an
advertisement
that
don't
need
headlines
or any
big type

Did you ever stop to think out the reason why so many—and increasingly many—of the big stations are buying Bryan-Marsh incandescent lamps?

Or did you ever pause and reflect why so many electrical engineers will have their specifications read: "Bryan-Marsh Imperial lamps or equally as good"

Did you ever?

Did you ever get a shipment of incandescent lamps and then wish you had ordered Bryan-Marsh Imperial instead?

Bryan-Marsh Company, Chicago, New York, Minneapolis, Cincinnati and Denver.

P. S.—Imperial Prismo Lamps the latest—and as usual about a year ahead of others in results accomplished

COLUMBIA LAMPS

THEY

Increase Profits.

Increase Sales.

Increase Customers.

THEY

Decrease Expenses.

Decrease Complaints.

Decrease Equipment.

Columbia Lamps are manufactured under a license to use the Chemical Exhaust Process of exhausting lamps. This process is vitally necessary in the production of the highest quality of lamp. Every package of Columbia lamps carries a label reading:

LICENSED UNDER
Patent No. 537,693, April 16, 1895
Patent No. 726,293, April 28, 1903
Patent No. 444,530, Jan. 13, 1891
Patent No. 532,760, Jan. 22, 1895

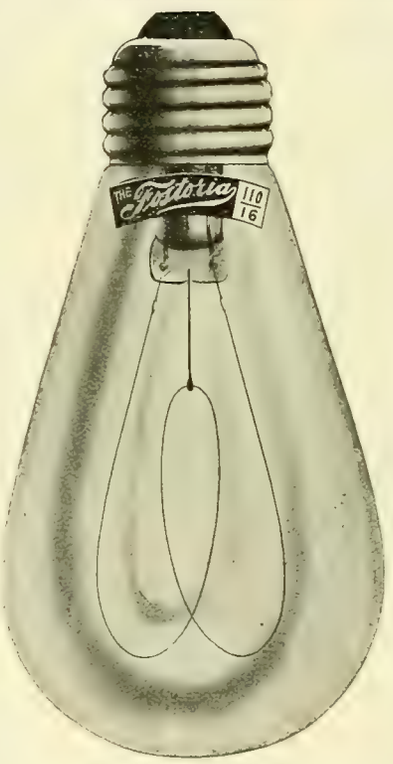
WE KNOW HOW

TO MAKE

TIPLESS LAMPS

We didn't learn how in a minute—and we don't make them like other people have TRIED to make them in the past. Our methods and machines are all covered by patents and so is the lamp.

This lamp is more perfect in mechanical construction than any tip lamp.



A Tipless Lamp has never heretofore been offered to the trade that had actual lamp qualities. We are now ready to furnish you with a tipless lamp that is unexcelled for actual lamp quality at prices which are as low as those of the best tip lamps, and at the same time save you from 3 to 12% less from broken tips and short life due to cracked and chipped tips.

To the man who wants the very best, this lamp must appeal, because it is the perfection of the modern lamp maker's art. Get our Prices and Booklet

THE FOSTORIA INCANDESCENT LAMP CO.
FOSTORIA,
OHIO.

The Holophane System of Illumination

was adopted EXCLUSIVELY by

THE SINGER MFG. CO.'S BOOTH, Section 23A, Manufactures Building

This system was selected after long and exhaustive tests of all the leading globes and shades on the market. The saving in current effected thereby over the system first adopted pays for the complete installation.

You will understand the WHY

when you visit our magnificent booth in

Section 25 Electricity Building

Our exhibit covers nearly 2,500 square feet and our demonstrators will make comparative tests on any kind of globes you may select.

Some new ideas in the use of The Holophane System will be Footlights and Border lights in Theaters, etc. Seven-color scheme for sign work. Store Window lighting, etc., etc.

SINGLE PHASE MOTOR FACTS

SOMETHING TO THINK ABOUT

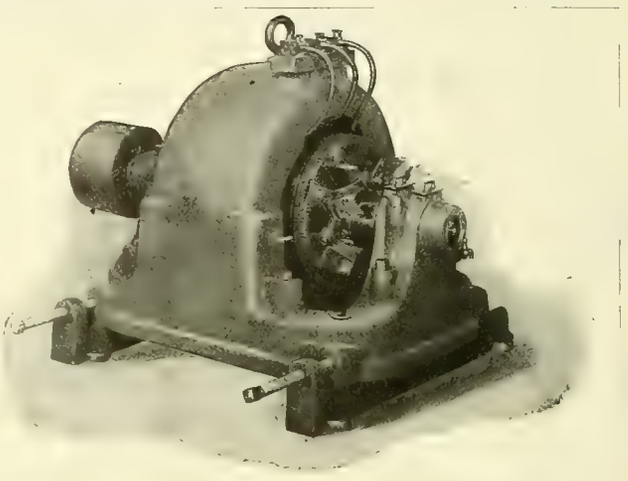
SPEAKING OF CENTRAL STATION POLICY

Do You Know

That, by using SINGLE PHASE, instead of two or three phase alternating-current motors, you can save from 15 to 50 per cent. of the first cost of your motor transformer installation?
That it costs you less to erect the ONE TRANSFORMER for a single-phase motor than two or three for a polyphase motor?
That in single-phase motor installations there is a SAVING of from 15 to 35 per cent. of TRANSFORMER LOSSES?
That at one per cent. per K. W. hour this means a saving of from TWO TO FIFTEEN DOLLARS A MOTOR per year?
That the increased loss in transformers for polyphase motors means TYING UP STATION CAPACITY?
That you can save from 10 to 50 per cent. of METER INVESTMENT by installing single-phase motors?
That you can save at least 50 per cent. of COST OF LABOR INSTALLING your meters?
That you can save 25 to 50 per cent. of the cost of labor in erecting your MAIN LINE WIRES by distributing single phase?

Do You Know

That you eliminate a portion of the expense of the conductors and save about 50 per cent. of CONDUIT OR CROSS-ARM SPACE, PINS, INSULATORS, ETC.?
That a prominent central-station man has found that for a 10-horsepower motor he can SAVE THE INVESTMENT of about one hundred dollars by distributing and supplying current to the motor single phase instead of polyphase?
That, therefore, SINGLE-PHASE SERVICE INSTALLATIONS ARE THE SIMPLEST, MOST ECONOMICAL AND THE LEAST EXPENSIVE INSTALLATIONS that central stations can put in for motor service?



Do You Know

That since the first of the year twenty-one of THE LARGER STATIONS east of the Alleghanies HAVE DECLARED IT THEIR POLICY TO INSTALL SINGLE-PHASE MOTORS exclusively, this decision entirely reversing their former policy in several cases?
That these changes in policy were decided upon after carefully considering the above questions?
That twenty of these stations are using WAGNER MOTORS EXCLUSIVELY?

WAGNER SINGLE PHASE MOTOR FACTS

SPEAKING OF MOTORS

Do You Know

That the WAGNER MOTOR is the only SINGLE-PHASE, ALTERNATING CURRENT MOTOR that will start and pull up its full load from rest?
That the WAGNER MOTOR develops a STARTING TORQUE of more than four times its full load running torque, having starting characteristics similar to that of direct-current series motors?
That the WAGNER MOTOR can develop TWICE FULL LOAD STARTING TORQUE with a starting current not to exceed 1¼ times full load current by using an inexpensive accessory?
That the WAGNER MOTOR IS PERFECTLY AUTOMATIC, and delivers its torque to its pulley at the instant the switch is closed?
That the WAGNER MOTOR will operate satisfactorily when connected to single, two or three phase circuit?
That the WAGNER MOTOR, on account of the above facts, has been largely instrumental in deciding a large number of polyphase central stations against polyphase distribution where single-phase motors of the desired capacity can be obtained?
That no CONDENSER is necessary in connection with the Wagner motor?

Do You Know

That a CONDENSER is one of the most UNRELIABLE AND DELICATE pieces of electrical apparatus in the market? It is liable to break down at any moment.
That a number of single-phase motors now on the market depend absolutely on the condenser for starting, and WHEN THE CONDENSER GIVES OUT THE MOTOR IS WORTHLESS?

Do You Know

That even with a condenser, such single-phase motors DEVELOP ONLY ENOUGH starting torque to START the armature WITHOUT LOAD?
That the WAGNER MOTOR does not bring its armature up to speed and then by means of a friction clutch start its load? Such a device cannot be safe, reliable or practical in every instance.
That a split-phase motor DOES NOT DEVELOP a full load starting torque, and, therefore, cannot be used in all cases?
That the phase displacing coil is HEAVILY OVERLOADED in starting, and can only be kept in circuit A SHORT TIME, otherwise it will burn out?
That the WAGNER MOTOR is without a phase-splitting device or a friction clutch pulley?

Do You Know

That the WAGNER SINGLE-PHASE MOTOR, manufactured by the WAGNER ELECTRIC MANUFACTURING CO., ST. LOUIS, MO., is the only single-phase motor on the market that FULFILLS THE REQUIREMENTS of A.-C. MOTOR SERVICE, having demonstrated its worth in over seven years of satisfactory service?

Have you received our catalogues on MOTORS AND TRANSFORMERS? If not, let us know.

If there is anything more that YOU WISH TO KNOW, write to the

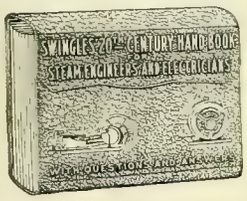
WAGNER ELECTRIC MFG. CO., ST. LOUIS, MO.

Three Extraordinary Books for Engineers and Electricians.

JUST FROM THE PRESS : : : New and Up to Date.

Written by Practical Engineers and Electricians in a language even a child can understand.

The 20th Century Hand Book for Engineers and Electricians.



A compendium of useful knowledge appertaining to the care and management of Steam Engines, Boilers and Dynamos. Thoroughly practical with full instructions. **By C. F. SWINGLE, M. E.** Formerly Chief Engineer of the Pullman Car Works. Late Chief Engineer of the Illinois Car and Equipment Co., Chicago.

ELECTRICAL DIVISION. The electrical part of this valuable volume was written by a practical engineer for engineers, and is a clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Storage Batteries, Indicators and Measuring Instruments.

Swingle's 20th Century Hand Book for Engineers and Electricians. Over 300 illustrations. Handsomely bound in full leather pocket-book style. Size, 5x6¾x1 inch thick. **PRICE NET, $2.50.**

Dynamo Tending for Engineers, Or, Electricity for Steam Engineers,

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY, authors of "Modern Wiring Diagrams and Descriptions for Electrical Workers." This excellent treatise is written by engineers for engineers. The authors have had the co-operation of the best authorities, each in his chosen field, and the information given is just such as a steam engineer should know. To further this information, and to more carefully explain the text, nearly 100 illustrations are used, which, with perhaps a very few exceptions, have been especially made for this book. It teaches just what the steam engineer should know in his engine room about electricity. 12mo, cloth, 100 illustrations. Size 5⅛x7¾. **PRICE NET, $1.50.**

The most important book on Electrical Construction Work ever issued. Modern

Wiring Diagrams and Descriptions for Electrical Workers.

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY.

This grand little volume not only tells you how to do it, but it shows you.

This book tells how to wire for call and alarm bells.
For burglar and fire alarm.
How to run bells from dynamo current.
How to install and manage batteries.
How to test batteries.
How to test circuits.
How to wire for annunciators, for telegraph, telephone and gas lighting.
It tells how to locate "trouble" and "ring out" circuits.
It tells about meters and transformers.
It contains 30 diagrams of electric lighting circuits alone.
It explains dynamos and motors, alternating and direct current.
It gives 10 diagrams of ground detectors alone.
It gives "Compensator" and Storage Battery installation.
It gives simple and explicit explanation of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing.

It gives a new and simple writing table covering all voltages and all losses or distances, etc.

160 pages. Over 200 illustrations. Full leather binding. Round corners. Red edges. Pocket size, 4 x 6. Price net, $1.50.

Each book sent charges paid to any address upon receipt of price. Your money returned if the books are not as represented.

TEST VOLTAGE 120,000!

Announcement:

WE TAKE pleasure in presenting to you our catalogue of High-tension Insulators made by the "Glaze-filling" process under our patent No. 600,475, March 8, 1898.

We have given the subject of Insulation of High-voltage Power-transmission very careful study, and conducted such tests in the past five years as warrant us in saying that insulators constructed under this process are sure to be the most thoroughly vitrified, and being made in separate parts of a uniform thickness, each part thoroughly glazed, and with the extra layers of glaze used in firing them together, an insulator is produced which is practically non-puncturable.

In addition to the types shown in our catalogue, we invite new designs, and realizing that engineers who are actively engaged in this transmission work are in a position to know better the requirements, we shall at all times be pleased to receive drawings and specifications from which to quote and furnish samples.

In conclusion, we wish to emphasize the fact that we will put nothing in the way of this material on the market but the best, made from the best materials and by the most skilled mechanics, and every piece will be tested severely before going out for use. We are thoroughly equipped for testing, with the latest improved transformers and measuring instruments.

Respectfully submitted,

Weston Patent Sustained and Jewell and Keystone Instruments Enjoined

The fundamental patent for the Weston Direct Current Electrical Measuring Instrument has just been sustained as valid by the United States Circuit Court for the Southern District of New York and as infringed by the direct-current instruments, both voltmeters and ammeters and of the portable and station type made by the Jewell Electrical Instrument Co. of Chicago, and by the Keystone Electrical Instrument Co. of Philadelphia.

On March 2nd, 1904, his Honor Judge Hoyt H. Wheeler held patent No. 392,387, dated November 6th, 1888, granted to Edward Weston for direct-current electrical measuring instruments and owned by the Weston Electrical Instrument Company, good and valid, and infringed by the various types of Jewell direct-current instruments.

The court said:—

"That this new arrangement of the coil upon pivots in this form of magnetic field, * * * was a great improvement on all or any prior electrical measuring instruments is very plain and obvious from an observation of the things which had gone before. It involved invention of high order and resulted in great success. Neither the anticipations relied upon, nor the alleged want of patentable novelty, seems to defeat or affect the validity of the patent for this improvement * *.

Decree for the plaintiff. Hoyt H. Wheeler, J."

On April 2nd, 1904, the same court by his Honor Henry E. Lacombe, Circuit Judge, granted a motion for preliminary injunction in Weston Electrical Instrument Co. vs. J. Franklin Stevens and another, doing business as the Keystone Electrical Instrument Co. The instruments involved were all of the various types of Keystone direct-current electrical measuring instruments.

The court said:—

"Without now making any decision as to the other claims it is held that 8, 12 and 13 are valid and infringed by defendant's structure, which certainly is as close if not closer, to device of the patent than was the infringing structure in the Jewell case."

The Weston Electrical Instrument Co. has granted no licenses to any other manufacturers to make or sell its movable coil, direct-current electrical measuring instrument and all such instruments are unauthorized and are an infringement of the Westonpatent No. 392,387.

All who deal in such infringing instruments and all who hereafter put into use any such infringing instruments, and also all who continue hereafter to use infringing instruments previously installed are guilty of infringement and will be held to strict accountability by the Weston Electrical Instrument Co.

The Weston Electrical Instrument Co. is prepared promptly to supply the entire demand for direct-current electrical measuring instruments of all types and for all uses.

BELT LIGHT AND POWER CO.
LEAD, S. D.

NOTICE OF LETTING LIGHTING CONTRACT.

The city of Effingham, Ill., hereby gives public notice that it will receive bids for the lighting of the streets and alleys of said city for a period of five, ten and fifteen years from November 5, 1904. Said bids to give the cost to be charged the city of Effingham per light per hour. The minimum number of street lamps to be sixty. All lamps to be inclosed arc lights of 2,000 candlepower. The minimum total number of hours of light furnished to be not less than 129,600 hours per annum. Light to be turned on or off at the direction of the city or its committee. The plant furnishing the light to be modern and city reserves the right to demand satisfactory evidence of the ability of the party or company bidding to perform the obligations incurred. The city agreeing to audit and pay bills monthly. The contract will carry penalties for failure to comply with contract.

The use of the streets and alleys being given, the city requires that in addition to the cost given for street light, the maximum charge for incandescent light for the use of the citizens of said city shall be given in the bid and also the price charged for commercial purposes on a day current.

The height of poles, wires and other details can be ascertained by inquiring of the mayor or the chairman on streets and alleys.

All lamps to be placed under the direction of the committee on light and water of said city.

Bids to be sealed and delivered to the clerk of the city of Effingham, Ill., on or before Tuesday, May 17, 1904.

The city reserves the right to reject any or all bids.

GREAT WESTERN SMELTING & REFINING COMPANY, CHICAGO.

DIRECT CONNECTED UNITS FOR LIGHTING AND POWER PURPOSES

One 500 Kw. General Electric 13200 volt, 25 cycle, three phase alternator type A. T. B., class 28-500-107, direct connected to Rice & Sargent cross compound engine with marine engine driven exciter, generator panel, exciter panel, condenser and piping.

One 200 Kw. General Electric 2300 volt, 60 cycle, three phase alternator type A. T. B., class 36-200-200, direct connected to 19x20 Russell engine.

One 200 Kw. Westinghouse 220 volt, 25 cycle, three phase, 14 pole alternator, speed 214, direct connected to 17½x21 Buckeye engine with exciter and switchboard. In excellent condition.

Two 150 Kw. Westinghouse 2200 volt, 60 cycle, single phase, 28 pole alternators, speed 217, each direct connected to 12-20x14 Harrisburg standard tandem compound engines.

One 75 Kw. General Electric 110-125 volt 6 pole generator, speed 270, direct connected to 11x12 Fisher four valve engine.

One 60 Kw. Eddy type G, 125 volt, 4 pole generator, speed 280, direct connected to 13x12 Buffalo Forge engine, brand new.

One 50 Kw. Commercial 125 volt, 6 pole generator, speed 275, direct connected to 8½-13x12 Armington & Sims tandem compound engine. In use less than one year.

One 50 Kw. Eddy type G, 125 volt 4 pole generator, speed 275, direct connected to 13x12 Harrisburg Ideal engine.

One 25 Kw. General Electric 110-125 volt 6 pole compound wound generator, speed 305, direct connected to 9½x10 Armington & Sims engine.

Two 25 Kw. Westinghouse 250 volt 6 pole generators, each direct connected to 9x10 Ball & Wood engine.

Direct Connected Railway Units, Belted Generators Alternating and Direct Current, Engines, Boilers, etc.

HYLO

16 to 1 Candle

LONG DISTANCE

HYLO

A switch at the end of the cord turns down, up or out, from any distance desired. Candle-power of lamp reduced from 16 to 1 by the simple operation of the switch.

The **HYLO** Long Distance Lamp outfit consists of Lamp of desired voltage and candlepower. Cord any length desired fitted with a special **HYLO** porcelain switch.

The switch fits readily in the palm of hand, is neat in appearance and handy.

The **HYLO** Long Distance lamp is attached to cord by means of snaps like a glove fastener.

Cord can be any length.

HYLO Turn Down Lamps turn down like gas, are made in various candle-powers, voltages and style of base. They are carried in both Detroit and Chicago stock for prompt shipment.

READ !!

OUR FAMOUS

Hand-Book Series.

NEW DYNAMO TENDERS' HAND-BOOK. By Lieut. F. B. Badt. One hundred and forty illustrations. An entirely new and up-to-date work, 226 pages, flexible cloth binding, size of page 5¾ x3½ inches. Designed for dynamo tenders, linemen, stationary and marine engineers. Just the book for men who wish to learn how to operate and care for electric light installations. The only book of the kind in the English language.

INCANDESCENT WIRING HAND-BOOK. By Lieut. F. B. Badt. Profusely illustrated. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, three of which are 12x18 inches. These tables give at once, and without any calculation, the size of wire required in each case for any percentage of loss. A timely book, containing full instructions for Incandescent Wiring, and complete information concerning Methods of Running Wires, Location of Safety Devices and Switches, Splices, Insulation and Testing for Faults, Wire Gauges, General Electrical Data, Calculating Size of Wires, Wiring of Fixtures, Elevators, Buildings, Isolated and Central Station Plants. The only complete book of the kind published.

BELL HANGERS' HAND-BOOK. By Lieut. F. B. Badt. Third edition; eighth thousand. 106 pages, 97 illustrations. Just the book for those engaged in selling, installing or handling Electric Batteries, Electric Bells, Elevator, House or Hotel Annunciators, Burglar or Fire Alarms, Electric Gas Lighting Apparatus, Electric Heat Regulating Apparatus, etc. The only book of its kind. Simple as A B C.

ELECTRIC TRANSMISSION HAND-BOOK. By Lieut. F. B. Badt. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables. Gives more practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants. A practical and reliable work.

THE TELEPHONE HAND-BOOK. By Herbert Laws Webb. 146 pages, 138 illustrations. cloth, hand-book size, price $1.00. Extract from preface: "This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work has not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and The Telephone Hand-Book is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

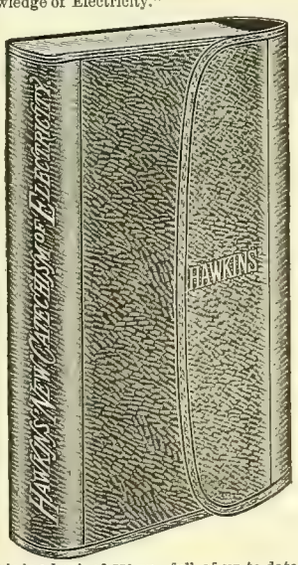
Price, $1.00 Each, Postage Prepaid.

ELECTRICIAN PUBLISHING CO.,
510 Marquette Bldg., Chicago.

HAWKINS' NEW CATECHISM OF ELECTRICITY.

A PRACTICAL TREATISE.

TESTIMONIAL. Chas. M. Weir, Chief Engineer U. S. Projectile Works, Brooklyn, N. Y.: "It is one of the most practical and concise works on the subject I ever saw It is just the right thing in the right place, and I most cheerfully recommend it to all who desire a practical knowledge of Electricity."



This is a book of 550 pp., full of up-to-date information. 300 illustrations. Handsomely bound in red leather, pocketbook form, size 4½x6½, with titles and edges in gold. Price, $2.00, postpaid. 100 page descriptive catalogue of electrical books free on request.

Keep Up With the Procession.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

ALLSOP, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators and similar apparatus. 177 illustrations.....$1.25

ATKINSON, PHILIP.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

ATKINSON, PHILIP.—The elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition $2.00

AYRTON, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, Based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition $2.50

BADT, LIEUT F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches $1.00

BADT, LIEUT. F. B.—Incandescent Wiring Hand Book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

BADT, LIEUT. F. B.—Bell Hangers' Hand Book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.....$1.00

BADT, LIEUT. F. B.—Electric Transmission Hand Book. First edition, 3,000 copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more Practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

BEDELL, FRED'K AND ALBERT C. CREHORE.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations $2.50

BELL, LOUIS, PH. D.—The Art of Illumination. This is the only book in the language which deals directly with the scientific and artistic use of modern illuminants, electric and other. Cloth, 339 pages, 127 illustrations. Price $2.50

BONNEY, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations, 208 pages. 12mo. cloth....$1.25

BOTTONE, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand Book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone $0.50

BOTTONE, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

BOTTONE, S. R.—Electro-Motors. How Made and How Used. A Hand Book for Amateurs and Practical Men. Reduced to $0.50

BUCKLEY, W. J.—Electric Lighting Plants, Their Cost and Operation. 275 pages, many illustrations and diagrams. Paper $1.00

CROCKER, F. B. AND WHEELER, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

CUSHING, H. C., JR.—Standard Wiring for Electric Light and Power. A compilation of formulæ, rules and requirements from the most modern practice, and in accordance with the rules and requirements of the Boston Fire Underwriters' Union, the New England Insurance Exchange, and as recommended by the Underwriters' International Electric Association. 12mo. leather $1.00

DESMOND, CHAS.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with, Alternate Electric Currents. Illustrated. Revised edition $2.50

DOBBS, A. E.—The Inspector and Trouble Man. A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards. 106 pages. Price...$1.00

DYER, A.—Induction Coils, How Made and How Used. Third edition. Boards $0.50

FLEMING, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations..$1.50

FLEMING, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents. 500 pages, fully illustrated and with copious index. Second edition $3.00
Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents. 8vo, cloth. London, 1892 .....$5.00

GAYETTY, J. W.—Motorman's Guide. A Practical Treatise on Street Railway Motors. Illustrations and diagrams. Cloth $0.50

GORDON.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations..$2.00

GORE, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition $2.00

GRIER, THOS. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference $1.00

HASKINS, C. C.—Electricity Made Simple. 233 pages, 108 illustrations. Paper covers.....$0.50
A valuable, non-technical work for those whose opportunities for gaining information on the branches treated have been limited.

HASKINS, C. H.—The Galvanometer and Its Uses. A Manual for Electricians and Students. Fourth edition; revised $1.50

HASKINS.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

HAWKINS, C. C. AND F. WALLIS.—The Dynamo, Its Theory, Design and Manufacture. 190 illustrations.$3.00

HAWKINS, N.—New Catechism of Electricity. A Practical Treatise Relating to the Dynamo and Motor, Wiring, the Electric Railway, Bell Fitting, etc., etc. Red leather, pocketbook form. 95 illustrations....$2.00

HOMANS, J. E., A. M.—A, B, C OF THE TELEPHONE. 352 pages, 269 illustrations. Price.....$1.00
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

HOPKINS, GEO. M.—Experimental Science. Elementary, Practical and Experimental Physics. 650 illustrations $4.00

HOPKINSON.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

HOPKINSON, DR. JOHN.—Dynamic Electricity; Its Modern Use and Measurements, Chiefly in Its Application to Electric Lighting and Telegraphy.....$0.50

HORSTMANN, H. C. AND VICTOR H. TOUSLEY.—Modern Wiring Diagrams and Descriptions. A Hand Book of Practical Diagrams and Information for Electrical Workers. 160 pages, over 200 illustrations. Full leather binding, pocket size 4x6.....$1.50

HOSPITALIER, E.—Domestic Electricity for Amateurs; Translated from the French, with additions by C. J. Wharton. With illustrations.....$2.50

HOUSTON, EDWIN J.—A Dictionary of Electrical Words, Terms and Phrases. Fourth edition, greatly enlarged, with over 6,000 additional words and definitions. 2 volumes, 1,000 pages.....$6.00

KAPP, GISBERT.—Electric Transmission of Energy and Its Transformation, Subdivision and Distribution. A practical hand book. Fourth edition.....$3.00

KAPP, GISBERT.—Alternate Current Machinery. Illustrated $0.50
(Vol. 96. Van Nostrand's Science Series.)

KAPP, GISBERT.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

KEMPE, H. R.—A Hand Book of Electrical Testing. Fifth edition. 200 illustrations. 8vo, cloth. London 1892 .....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

KEMPE, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables, and Data. 32mo, leather $1.75

LOCKWOOD, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Hand Book of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations.....$2.50

LOCKWOOD, T. D.—Electrical Measurement and the Galvanometer; Its Construction and Use. Second edition $1.50

LYNDON, L.—Storage Battery Engineering. A Practical Treatise for Engineers. This is a practical work, intended for the electrical engineer who is called on to design and install storage battery equipments, or who has a battery power plant under his care. Cloth. 360 pages, 178 illustrations and diagrams, 4 large folding plates. Price $3.00

MEADOWCROFT, W. H.—The A, B, C of Electricity. 36 illustrations. 12mo, cloth. New York.....$0.50

MAYER AND DAVIS, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

MEYER, HENRY, C., JR., M. E.—Steam Power Plants. Their Design and Construction. Cloth. 165 pages, 63 illustrations, 15 folding plates. Price.....$2.00

MILLER, KEMPSTER B.—American Telephone Practice. 518 large octavo pages, 379 illustrations.....$3.00
This book treats of the subject in a simple and comprehensive manner from the practical standpoint, and almost entirely without the use of mathematics.

NOLL, AUGUSTUS.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

POPE, FRANKLIN LEONARD.—Modern Practice of the Electric Telegraph. A technical hand book for Electricians, Managers and Operators. 185 illustrations. Fourteenth edition, rewritten and enlarged.....$1.50

PRINDLE, H. B.—A Popular Treatise on the Electric Railway of To-day. Fully illustrated.....$0.25

REED, LYMAN C.—American Meter Practice. This is the only American book dealing with the theory and practice of current metering. Cloth. About 250 pages, Illustrated. Price $2.00

RUSSELL, STUART A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

SALOMONS, SIR DAVID.—Electric Light Installations. Vol 1 The Management of Accumulators. A Practical Hand Book. Seventh edition, revised and enlarged. With illustrations. 12mo, cl. London, 1893.....$1.50

SLOANE, T. O'CONNOR.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of Its Practical Application in every day life. Illustrated $1.00

SLOANE, T. O'CONNOR.—The Standard Electrical Dictionary. A popular dictionary of words and terms used in the practice of electrical engineering. 350 illustrations $3.00

SLOANE, T. O'CONNOR.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys $1.00

SLOANE, T. O'CONNOR.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

STEVENS, H. G.—Mechanical Catechism. For Stationary and Marine Engineers, Firemen, Electricians, Motormen, Ice Machine Men and Mechanics in General. 336 pages, over 240 illustrations. Cloth.....$1.00

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. A series of lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66).....$0.50

THOMPSON, SYLVANUS P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of.....$3.50

THOMPSON, SYLVANUS P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75).....$0.50

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. Eighth edition, revised and rewritten. Numerous illustrations and 19 plates. Nearly 1,000 pages.....$6.00

THURSTON, PROF. R. H.—Stationary Steam Engines, Especially Adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates $2.50

TREVERT.—How to Make Electric Batteries at Home. Illustrated $0.25

URQUHART.—Electro-Plating. A Practical Hand Book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions.....$2.00

WALKER, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98).....$0.50

WEBB, H. L.—A Practical Guide to the Testing of Insulated Wires and Cables. Illustrated.....$1.00

WEBB, HERBERT LAWS.—Telephone Hand Book. Illustrated. 12mo, cloth. Chicago, 1895.....$1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

WEBER.—The Handy Vest Pocket Electrical Dictionary.

WE WIN!

Self-Restoring Drop patent suit. Decided in favor of the Western Telephone Mfg. Co.!!

¶ This suit was begun about eight years ago, and is the **most important case** affecting the patents on Independent telephone apparatus. It involves nearly every company in the business.

¶ The suit was against the **American Electric Telephone Co., P. C. Burns, et al.,** and was decided Tuesday, April 12, 1904, in the **United States Circuit Court of Appeals** at Chicago.

¶ The defendants are found to be infringers, and the court granted an injunction prohibiting the manufacture of all Mechanical Self-Restoring Drops; except those made by the Western Telephone Manufacturing Co., or its predecessor, the Western Telephone Construction Co. An accounting for all drops used also was ordered. **This decision is final.** Write to us for a copy of the decision.

JEWELL

Special Notice

The Jewell Electrical Instrument Company wishes to announce that it will in the near future be ready to supply its customers with direct-current Ammeters and Voltmeters of an entirely different type from those manufactured in the past. Some of the features which characterize this new instrument are: It is dead beat, it has a uniformly divided scale, and it is very simple in its construction. The Ammeters work on the same external shunts as the old type; the Voltmeters have high internal resistance.

We wish to thank our many customers for their generous patronage in the past, and we solicit a continuance of their business in the future.

SAMSON TURBINE
The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	¾	257 r. p. m.	1750	95¢	730¢
213 ft.	¾	257 r. p. m.	3000	95¢	856¢
213 ft.	Full	257 r. p. m.	3500	95¢	815¢

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

THE PERKINS PATENT AND THE YOST SOCKET

In a recent advertisement we mentioned that the Perkins Socket Patent No. 626,927, had been sustained by a United States Circuit Court, which directed the issuance of an injunction against the defendants, J. F. Buchanan & Co., "selling the Yost sockets."

The Yost Electric Mfg. Co. of Toledo, Ohio, complains that we should not have said "Yost sockets," but should have said "the Dixon socket which had been manufactured by the Yost-Miller Co." We agree that it would have been correct to speak of the socket sold by the Buchanans when the suit was commenced in 1902, as the "Dixon socket which had been manufactured by the Yost-Miller Co." A year or more ago, as we understand, the Yost Electric Mfg. Co. succeeded the Yost-Miller Co., acquired from it the Dixon socket patent, and took up the defense of this Buchanan suit, after which the Yost Electric Mfg. Co., dropping the name "Dixon," put out under the name "Yost," a socket the same as the Dixon in all essential points now covered by the Buchanan decision. While, therefore, it would have been correct to speak of the enjoined socket as the Dixon socket, we believe it was not improper to indentify it by its other name of "Yost." However, the omission to use the name "Dixon" or the name "Yost-Miller Co." was not intentional.

We have now brought suit against the Yost Electric Mfg. Co. on this Perkins patent to enjoin the manufacture and sale of their "Yost" socket.

THE PERKINS ELECTRIC SWITCH MFG. CO.

NEW YORK CITY. BRIDGEPORT, CONN. CHICAGO, ILL.

STOW MULTI-SPEED MOTOR

What Do We Claim?

Primarily a great improvement in method of speed regulation.

While they are no larger than standard motors of the same H.P. and minimum speed, as built by leading manufacturers, the range of speed through which they will carry their full load is four times as great.

They will carry their full load at ALL SPEEDS within their range without sparking, with an efficiency practically as high at one speed as at another.

Great simplicity in construction.

They require but one voltage to operate.

What About Speed Variation?

They give every imaginable speed between the highest and lowest point.

No auxiliary wiring or apparatus required.

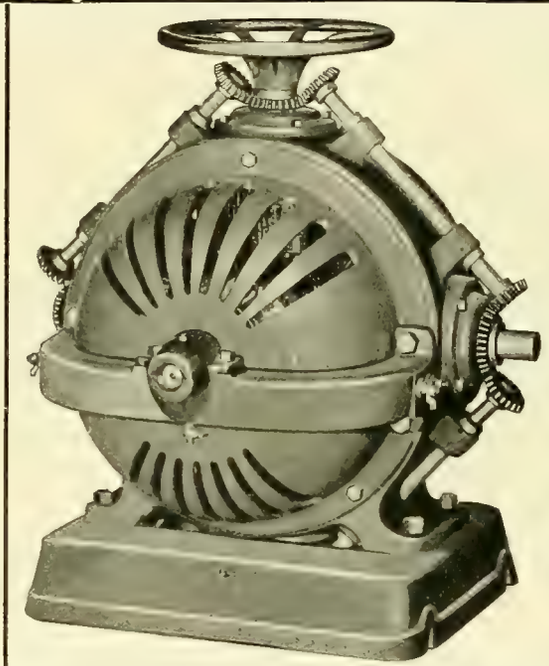
No rheostat or controller.

Motor self-contained.

Simply turn hand wheel and with every fraction of a revolution a proportionate change of speed is given.

No jumping from step to step—you simply *glide* from one speed to another, securing just the speed you require.

If variable-speed motors are needed isn't this system of speed regulation worthy of investigation?



An Experiment? No.

We began to market our Stationary Motors about four years ago. Since that time they have practically demonstrated their special fitness for many of the purposes where wide range and fine regulation of speed was requisite, notably Printing Presses, Pumps, Lathes and other machine tools. The sale of sample motors has been most satisfactory, and in many instances has resulted in the entire equipment of shops with from 5 to 60 motors.

We should take great pleasure in referring to a number of our satisfied customers.

General European Agents

Selig Sonnenthal & Co.

85 Queen Victoria St.

London, England

Our Proposition!

We will take pleasure in mailing you, on request, a copy of our No. 52 Bulletin, which states more broadly and in detail our claims for this new departure in motor construction. On the basis of those claims we should be pleased to furnish you one or more of these motors. If, after 30 days' trial, you are not satisfied that they are fully maintained, you can return at our expense.

We know what this motor is and want to share our knowledge with you. Won't you give us an opportunity?

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel, Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

SOMETHING NEW
IN METERS

An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switch arm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

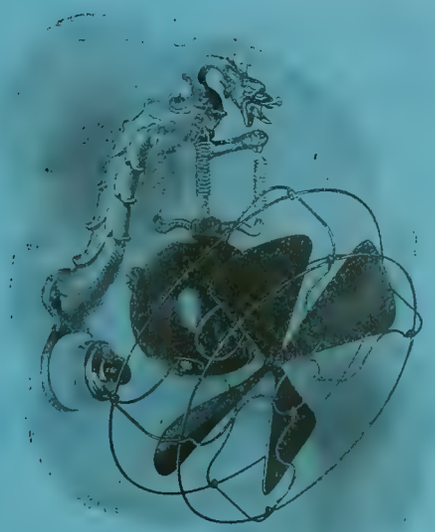
"WOOD" LIGHTING AND POWER SYSTEMS

TELEPHONE BOOTH FAN MOTORS



The small "Wood" fan motor spring suspended from wall bracket is a model booth fan. A 3-pound motor, an 8-inch fan, 1200 r.p.m. and 20 watts produce a plenty of breeze and no noise or vibration.

Special motors for operation in series with incandescent lamp result in 50 to 60 watts of energy, light for booth and satisfaction to owner and user.

A Square Inch of Scale Prevented is Worth More Than a Square Foot Removed.
International Boiler Compound
In Liquid Powder or Brick Forms

Attacks the mineral contained in the water, destroys the hardening qualities and prevents them from forming into scale. It removes rust, prevents corrosions, and pitting, and preserves the iron. It is free from acids or anything that can destroy the iron.

It is death to scale and scale formers. It is a pure compound, and is worth much in reduction of fuel cost. It is sent on trial and approval.

May we send our treatise ?

THE YOST SOCKET

VERSUS

The Perkins Electric Switch Mfg. Co.'s Statement

TO THE USERS OF YOST SOCKETS

In an advertisement appearing in the electrical trade papers of last week, the Perkins Electric Switch Mfg. Co. stated, that the Yost Electric Mfg. Co. dropped the name "Dixon" from the socket formerly made by The Yost-Miller Company, known as the Dixon Socket, and put on the name "Yost", and that the socket we now make is essentially the same socket as the Dixon Socket. These are not the facts, notwithstanding this statement, as our sockets were changed, under advice of counsel to avoid semblance of infringement, over a year ago.

Therefore, the present Yost Socket differs very materially from the Dixon Socket, and is covered by four different United States Patents, owned by the Yost Electric Mfg. Co. and under which we manufacture, and shall maintain our rights and protect our customers.

The Perkins Electric Switch Mfg. Co. we realize have the same privilege. We are perfectly satisfied to have the matter adjudicated by the Courts, and we are perfectly willing to abide by the result.

The Buchanan suit on the "Dixon" Socket is still in the Courts, on appeal. The advertisement referred to, therefore, appears premature, uncalled for, unbusinesslike and lacks ordinary business courtesy, and is not confined within the facts.

THE YOST ELECTRIC MFG. CO.

TOLEDO - - - - - - - OHIO

The issues of May 21st, May 28th and June 4th of the Western Electrician will cover the annual convention of the National Electric Light Association, to be held in Boston, May 24-27. It will pay you to be largely represented in the advertising columns of these important numbers. Reserve your space NOW.

Fessenden Wireless Telegraph System

THE NATIONAL ELECTRIC SIGNALLING CO.

As the result of five years' experimental work, including a working test of a full year, this system is now put on the market as being equal as regards speed and reliability to manually operated wire lines, and superior as regards first cost and maintenance.

This system uses no coherer, the receiver consisting of a minute cylinder of liquid whose resistance is lowered by the heating effect of the electric waves. As it is approximately twenty-five to fifty times as sensitive as the Solari coherer, and is admirably adapted to sharp tuning, much less energy is needed for a given distance, and difficulties from atmospheric disturbances and interference can be overcome.

This system does not infringe the patents of any other company and the operation of the apparatus is guaranteed.

Telegraphic sets for working up to 150 miles over land or up to 350 miles over sea are now standardized and can be supplied from stock or on short notice. Sets for working over longer distances supplied at short notice. Sets can be tested by purchaser before delivery between the company test stations, approximately ninety miles over land, or between the company's marine stations.

BITUMINIZED FIBRE CONDUIT

A conduit of endless durability.

A continuous sealed, insulating duct from manhole to manhole, impervious to gas and moisture and **electrolysis proof.**

A duct that is and remains **perfectly aligned** into which and out of which cables can be drawn with ease and rapidity without the possibility of a scratch.

Saves sixty per cent. of freight and handling costs and twenty to thirty-five per cent. of construction cost.

All diameters one to ten inches, seven-foot lengths.

Bends of all angles. Prompt deliveries.

Send for illustrated book. Ask for prices, giving size and quantities required.

A BOOK OF MERIT

MODERN ELECTRIC RAILWAY MOTORS.

BY GEO. T. HANCHETT, M. E.

FIRST PRACTICAL WORK ON RAILWAY MOTORS.

CONTENTS.—Chapter I.—Forms of Field Magnets. II.—Armature Winding Diagrams. III.—Field Coil Construction and Arrangement. IV.—Armature Construction. V.—Commutator and Brush Holder Construction. VI.—Motor Casings. VII.—Motor Suspensions. VIII.—Bearings and Gears. IX.—Lubrication. X.—General Dimensions and Data. XI.—Management and Repair. XII.—Railway Motor Design.

200 Pages. 157 Illustrations and Table. Price $2.00.

THIS is a book unique in its treatment of electric railway equipment. The first ten chapters are devoted to minute description of the details of electric railway motors that are in use to-day. Each organ of an electric railway motor is taken up in turn, described and illustrated by examples of present and past practice, and its operation explained in the light of practical experience. In short, the review of current practice is of such a nature as to bring out the reason why the electric railway motor is built as it is to-day. For example, field magnets of different types of motors are illustrated and compared, and their features of merit and faults pointed out. Armatures, armature windings, brush holders, suspensions and other details are similarly treated, each detail, however minute, being exhaustively considered. The last two chapters are devoted, one to the management and repair of electric railway motors, and the other to railway motor design, a complete design being worked out as an example. A table gives authoritative data of all types of railway motors in common use, both in America and Europe. **Sent postpaid on receipt of price.**

CENTRAL STATION IMPROVEMENT CO., 938 Monadnock Block, CHICAGO.

Standard Electrical Dictionary.

BY PROF. T. O'CONOR SLOANE.
Author of "Arithmetic of Electricity," "Electricity Simplified," "Electric Toy Making," Etc.

682 Pages, 393 Illustrations. Handsomely bound in cloth, 8vo, $3.

An Entirely New Edition, Brought Up to Date and Greatly Enlarged.

COMPLETE—CONCISE—CONVENIENT.

In publishing the "Standard Electrical Dictionary," the author has adhered to what the work purports to be, exhausting the subject of electrical terms, giving each title the clearness of explanation necessary to make the understanding of it complete without unnecessary elaboration. In this work, every electrical word, term, or phrase will be found intelligently defined.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in any way interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact, it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

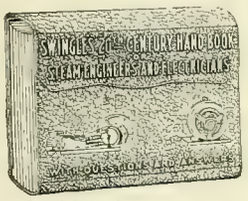
Three Extraordinary Books for Engineers and Electricians.

JUST FROM THE PRESS : : : New and Up to Date.

Written by Practical Engineers and Electricians in a language even a child can understand.

The 20th Century Hand Book for Engineers and Electricians.



A compendium of useful knowledge appertaining to the care and management of Steam Engines, Boilers and Dynamos. Thoroughly practical with full instructions. **By C. F. SWINGLE, M. E.** Formerly Chief Engineer of the Pullman Car Works. Late Chief Engineer of the Illinois Car and Equipment Co., Chicago.

ELECTRICAL DIVISION. The electrical part of this valuable volume was written by a practical engineer for engineers, and is a clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Storage Batteries, Indicators and Measuring Instruments.

Swingle's 20th Century Hand Book for Engineers and Electricians Over 300 illustrations. Handsomely bound in full leather pocket-book style. Size, 5x6¾x1 inch thick. **PRICE NET, $2.50.**

Dynamo Tending for Engineers, Or, Electricity for Steam Engineers,

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY, authors of "Modern Wiring Diagrams and Descriptions for Electrical Workers." This excellent treatise is written by engineers for engineers. The authors have had the co-operation of the best authorities, each in his chosen field, and the information given is just such as a steam engineer should know. To further this information, and to more carefully explain the text, nearly 100 illustrations are used, which, with perhaps a very few exceptions, have been especially made for this book. It teaches just what the steam engineer should know in his engine room about electricity. 12mo, cloth, 100 illustrations. Size 5½x7¾. **PRICE NET, $1.50.**

The most important book on Electrical Construction Work ever issued. Modern

Wiring Diagrams and Descriptions for Electrical Workers.

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY.

This grand little volume not only tells you how to do it, but it shows you.

This book tells how to wire for call and alarm bells.
For burglar and fire alarm.
How to run bells from dynamo current.
How to install and manage batteries.
How to test batteries.
How to test circuits.
How to wire for annunciators, for telegraph, telephone and gas lighting.
It tells how to locate "trouble" and "ring out" circuits.
It tells about meters and transformers.
It contains 30 diagrams of electric lighting circuits alone.
It explains dynamos and motors, alternating and direct current.
It gives 10 diagrams of ground detectors alone.
It gives "Compensator" and Storage Battery installation.
It gives simple and explicit explanation of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing.

It gives a new and simple writing table covering all voltages and all losses or distances, etc.

160 pages. Over 200 illustrations. Full leather binding. Round corners. Red edges. Pocket size, 4 x 6. Price net, $1.50.

Each book sent charges paid to any address upon receipt of price. Your money returned if the books are not as represented.

The Electro-Magnet
—BY—
TOWNSEND WOLCOTT, A. E. KENNELLY, RICHARD VARLEY.
PRICE, ONE DOLLAR,
CONTENTS.
General Properties. Magnetic Field of Force Magnetic Units. Induced Magnet, Reluctance, Permeability. Discovery of Electro-Magnetism. Iron Ring in the Magnetic Field. Calculation of Magnet Windings. Magnetic Circuit. Given Ampere-Turns to Find Proper Current. Relation of Ampere-Turns to Wire Space. Room Occupied by Insulation, Heating and Other Limiting Conditions. Winding a Magnet for a Given Voltage. Hysteresis, Self-Induction. Alternating Currents. Traction.

On the Relative Values of the Windings of Electro-Magnetic Coils. Properties of Fixed Winding Spaces and a Fixed Size of Wire. Properties of Fixed Winding Space and Variable Size of Wire. Fixed Winding Space and Fixed Length of Wire or Number of Turns. Constant Internal Dimensions, but External Diameter of Coil Variable. Fixed Internal Radius and Interflange-Fixed Number of Turns of Same Size of Wire.

The Importance of Details. Actual Calculations. Working Formulæ. Diameter of Wire to Carry Given Current. Diameter of Wire to Have Given Resistance. Thickness of Insulation in a Given Coil. Weight of Copper in a Given Coil. Table of Constants for Insulated Wire. Standard Table of Resistances of Insulated Wires. Table Showing Percentage of Copper and Insulation in Cotton or Silk Covered Wire. Standard Copper Wire Table. 17 Problems (Solved) Illustrated. Cuts of 37 Magnets of Standard Dimensions, Lengths Variable. Logarithms and Anti-Logarithms. Decimal Parts of an Inch. Logarithmic Scale.

READ !!
OUR FAMOUS
Hand-Book Series.

NEW DYNAMO TENDERS' HAND-BOOK. By Lieut. F. B. Badt. One hundred and forty illustrations. An entirely new and up-to-date work, 226 pages, flexible cloth binding, size of page 5¾ x3½ inches. Designed for dynamo tenders, linemen, stationary and marine engineers. Just the book for men who wish to learn how to operate and care for electric light installations. The only book of the kind in the English language.

INCANDESCENT WIRING HAND-BOOK. By Lieut. F. B. Badt. Profusely illustrated. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, three of which are 12x18 inches. These tables give at once, and without any calculation, the size of wire required in each case for any percentage of loss. A timely book, containing full instructions for Incandescent Wiring, and complete information concerning Methods of Running Wires, Location of Safety Devices and Switches, Splices, Insulation and Testing for Faults, Wire Gauges, General Electrical Data, Calculating Size of Wires, Wiring of Fixtures, Elevators, Buildings, Isolated and Central Station Plants. The only complete book of the kind published.

BELL HANGERS' HAND-BOOK. By Lieut. F. B. Badt. Third edition; eighth thousand. 106 pages, 97 illustrations. Just the book for those engaged in selling, installing or handling Electric Batteries, Electric Bells, Elevator, House or Hotel Annunciators, Burglar or Fire Alarms, Electric Gas Lighting Apparatus, Electric Heat Regulating Apparatus, etc. The only book of its kind. Simple as A B C.

ELECTRIC TRANSMISSION HAND-BOOK. By Lieut. F. B. Badt. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables. Gives more practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants. A practical and reliable work.

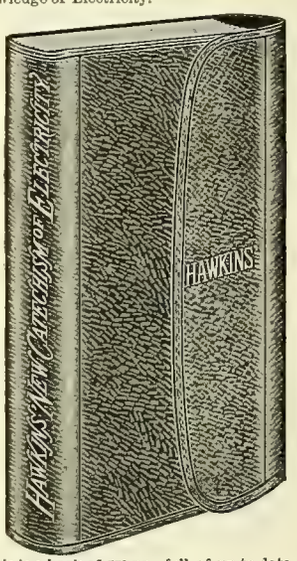
THE TELEPHONE HAND-BOOK. By Herbert Laws Webb. 146 pages, 138 illustrations. cloth, hand-book size, price $1.00. Extract from preface: "This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work has not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and The Telephone Hand-Book is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

Price, $1.00 Each, Postage Prepaid.

ELECTRICIAN PUBLISHING CO.,
510 Marquette Bldg., Chicago.

HAWKINS' NEW CATECHISM OF **ELECTRICITY.**
A PRACTICAL TREATISE.

TESTIMONIAL. Chas. M. Weir, Chief Engineer U. S. Projectile Works, Brooklyn, N. Y.: "It is one of the most practical and concise works on the subject I ever saw It is just the right thing in the right place, and I most cheerfully recommend it to all who desire a practical knowledge of Electricity."



This is a book of 550 pp., full of up-to-date information. 300 illustrations. Handsomely bound in red leather, pocketbook form, size 4½x6½, with titles and edges in gold. Price, $2.00, postpaid. 100 page descriptive catalogue of electrical books free on request.

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

"LAKE SHORE" SPECIAL
TO
BOSTON CONVENTION
of National Electric Light Association, meeting May 24, 25, 26, 27, Hotel Vendome.

For the exclusive use of delegates, supplymen and their friends who will attend the above meeting, the

Lake Shore and Michigan Southern Railway

will provide a train of special sleeping cars, which, with dining and buffet library cars, it is proposed to run as the first section of the New England Express, leaving Chicago at 2 p. m. Sunday, May 22d, arriving Boston at 5 p. m. Monday.

To enable us to provide desirable sleeping car accommodations for you, please advise us as early as possible what space you will require.

A rate of one and one-third fare for the round trip, on the certificate plan, has been authorized for this meeting, which will also be available leaving Chicago as early as May 20th, and good returning, leaving Boston not later than May 31st.

Applications for sleeping car reservations (which should be made early) or any additional information, may be addressed to

P. S.—First come first served" on the "lower" berths.

SOMETHING NEW
IN METERS

An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switch arm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

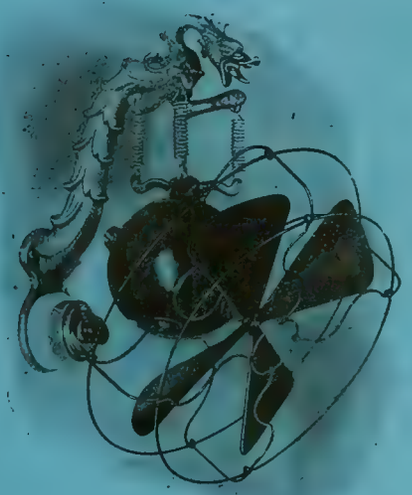
"WOOD" LIGHTING AND POWER SYSTEMS

TELEPHONE BOOTH FAN MOTORS



The small "Wood" fan motor spring suspended from wall bracket is a model booth fan. A 3-pound motor, an 8-inch fan, 1200 r.p.m. and 20 watts produce a plenty of breeze and no noise or vibration.

Special motors for operation in series with incandescent lamp result in 50 to 60 watts of energy, light for booth and satisfaction to owner and user.

Electric Light Convention

THE twenty-seventh convention of the National Electric Light Association, perhaps the most important electrical event of the year, will be held in Boston, May 24th to 27th inclusive. It is predicted that this will be the largest and most successful meeting ever held. The association has enrolled hundreds of new members during the past year, and its prospects are brighter than ever before.

As usual the WESTERN ELECTRICIAN will pay special attention to this annual event, and it will be covered by our issues of May 21st, May 28th and June 4th. The issue of May 21st, which will be distributed at the convention, will be a most pleasing one to every central station man and others interested in electric lighting and power work. It will contain specially written articles on up-to-date subjects, and other features which will make it one of the most interesting issues of the year.

Our issues of May 28th and June 4th will contain a complete report of the proceedings.

Every manufacturer and dealer wishing to increase his business should be largely represented in the advertising columns of these important numbers. Realizing the importance of this convention, a number of advertisers have already arranged for space in these issues.

We urge you to take advantage of these important issues, and trust you will reserve a space immediately in order to obtain a choice location.

G. I. Co.

CHICAGO EDISON COMPANY, 139 Adams Street, CHICAGO.

Three Extraordinary Books for Engineers and Electricians.

JUST FROM THE PRESS : : :
New and Up to Date.

Written by Practical Engineers and Electricians in a language even a child can understand.

The 20th Century Hand Book for Engineers and Electricians.

A compendium of useful knowledge appertaining to the care and management of Steam Engines, Boilers and Dynamos. Thoroughly practical with full instructions. **By C. F. SWINGLE, M. E.** Formerly Chief Engineer of the Pullman Car Works. Late Chief Engineer of the Illinois Car and Equipment Co., Chicago.

ELECTRICAL DIVISION. The electrical part of this valuable volume was written by a practical engineer for engineers, and is a clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Storage Batteries, Indicators and Measuring Instruments.

Swingle's 20th Century Hand Book for Engineers and Electricians. Over 300 illustrations. Handsomely bound in full leather pocket-book style. Size, 5x6¾x1 inch thick. **PRICE NET, $2.50.**

Dynamo Tending for Engineers, Or, Electricity for Steam Engineers,

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY, authors of "Modern Wiring Diagrams and Descriptions for Electrical Workers." This excellent treatise is written by engineers for engineers. The authors have had the co-operation of the best authorities, each in his chosen field, and the information given is just such as a steam engineer should know. To further this information, and to more carefully explain the text, nearly 100 illustrations are used, which, with perhaps a very few exceptions, have been especially made for this book. It teaches just what the steam engineer should know in his engine room about electricity. 12mo, cloth, 100 illustrations. Size 5¼x7¾. **PRICE NET, $1.50.**

The most important book on Electrical Construction Work ever issued. Modern

Wiring Diagrams and Descriptions for Electrical Workers.

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY.

This grand little volume not only tells you how to do it, but it shows you.

This book tells how to wire for call and alarm bells.
For burglar and fire alarm.
How to run bells from dynamo current.
How to install and manage batteries.
How to test batteries.
How to test circuits.
How to wire for annunciators, for telegraph, telephone and gas lighting.
It tells how to locate "trouble" and "ring out" circuits.
It tells about meters and transformers.
It contains 30 diagrams of electric lighting circuits alone.
It explains dynamos and motors, alternating and direct current.
It gives 10 diagrams of ground detectors alone.
It gives "Compensator" and Storage Battery installation.
It gives simple and explicit explanation of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing.

It gives a new and simple writing table covering all voltages and all losses or distances, etc.

160 pages. Over 200 illustrations. Full leather binding. Round corners. Red edges. Pocket size, 4 x 6. Price net, $1.50.

Each book sent charges paid to any address upon receipt of price. Your money returned if the books are not as represented.

BITUMINIZED FIBRE CONDUIT

A conduit of endless durability.

A continuous sealed, insulating duct from manhole to manhole, impervious to gas and moisture and **electrolysis proof.**

A duct that is and remains **perfectly aligned** into which and out of which cables can be drawn with ease and rapidity without the possibility of a scratch.

Saves sixty per cent. of freight and handling costs and twenty to thirty-five per cent. of construction cost.

All diameters one to ten inches, seven-foot lengths.

Bends of all angles. Prompt deliveries.

Send for illustrated book. Ask for prices, giving size and quantities required.

A BOOK OF MERIT

MODERN ELECTRIC RAILWAY MOTORS.

BY GEO. T. HANCHETT, M. E.

FIRST PRACTICAL WORK ON RAILWAY MOTORS.

CONTENTS.—Chapter I.—Forms of Field Magnets. II.—Armature Winding Diagrams. III.—Field Coil Construction and Arrangement. IV.—Armature Construction. V.—Commutator and Brush Holder Construction. VI.—Motor Casings. VII.—Motor Suspensions. VIII.—Bearings and Gears. IX.—Lubrication. X.—General Dimensions and Data. XI.—Management and Repair. XII.—Railway Motor Design.

200 Pages. 157 Illustrations and Table. Price $2.00.

THIS is a book unique in its treatment of electric railway equipment. The first ten chapters are devoted to minute description of the details of electric railway motors that are in use to-day. Each organ of an electric railway motor is taken up in turn, described and illustrated by examples of present and past practice, and its operation explained in the light of practical experience. In short, the review of current practice is of such a nature as to bring out the reason why the electric railway motor is built as it is to-day. For example, field magnets of different types of motors are illustrated and compared, and their features of merit and faults pointed out. Armatures, armature windings, brush holders, suspensions and other details are similarly treated, each detail, however minute, being exhaustively considered. The last two chapters are devoted, one to the management and repair of electric railway motors, and the other to railway motor design, a complete design being worked out as an example. A table gives authoritative data of all types of railway motors in common use, both in America and Europe. **Sent postpaid on receipt of price.**

"LAKE SHORE" SPECIAL

TO

BOSTON CONVENTION

of National Electric Light Association, meeting May 24, 25, 26, 27, Hotel Vendome.

For the exclusive use of delegates, supplymen and their friends who will attend the above meeting, the

Lake Shore and Michigan Southern Railway

IN CONJUNCTION WITH

New York Central & Hudson River R. R.

will provide a train of special sleeping cars, which, with dining and buffet library cars, it is proposed to run as the first section of the New England Express, leaving Chicago at 2 p. m. Sunday, May 22d, arriving Boston at 5 p. m. Monday.

To enable us to provide desirable sleeping car accommodations for you, please advise us as early as possible what space you will require.

A rate of one and one-third fare for the round trip, on the certificate plan, has been authorized for this meeting, which will also be available leaving Chicago as early as May 20th, and good returning, leaving Boston not later than May 31st.

Applications for sleeping car reservations (which should be made early) or any additional information, may be addressed to

P. S.—"First come first served" on the "lower" berths.

CITY HALL

CITY OF CASSELTON.

RECEIVED AUG 1 1903 Answered.

Casselton, North Dakota. July 30th, 1903.

Western Electrician,
Chicago, Ill.

Gentlemen:--

Enclosed I herewith hand you a New York draft for $16. in payment of the enclosed bill, which kindly receipt and return, and greatly oblige.

Allow me to compliment you on the circulation of the "Western Electrician" and its efficiency as an advertising medium. We had our plant advertised in other electrical journals, but the inquiries brought through our ad in your columns far exceeded in numbers those of any other paper.

Very respectfully,

Bruce H. Yowells.
City Auditor

READ !!
OUR FAMOUS
Hand-Book Series.

NEW DYNAMO TENDERS' HAND-BOOK. By Lieut. F. B. Badt. One hundred and forty illustrations. An entirely new and up-to-date work, 228 pages, flexible cloth binding, size of page 5¼ x3½ inches. Designed for dynamo tenders, linemen, stationary and marine engineers. Just the book for men who wish to learn how to operate and care for electric light installations. The only book of the kind in the English language.

INCANDESCENT WIRING HAND-BOOK. By Lieut. F. B. Badt. Profusely illustrated. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, three of which are 12x18 inches. These tables give at once, and without any calculation, the size of wire required in each case for any percentage of loss. A timely book, containing full instructions for Incandescent Wiring, and complete information concerning Methods of Running Wires, Location of Safety Devices and Switches, Splices, Insulation and Testing for Faults, Wire Gauges, General Electrical Data, Calculating Size of Wires, Wiring of Fixtures, Elevators, Buildings, Isolated and Central Station Plants. The only complete book of the kind published.

BELL HANGERS' HAND-BOOK. By Lieut. F. B. Badt. Third edition; eighth thousand. 106 pages, 57 illustrations. Just the book for those engaged in selling, installing or handling Electric Batteries, Electric Bells, Elevator, House or Hotel Annunciators, Burglar or Fire Alarms, Electric Gas Lighting Apparatus, Electric Heat Regulating Apparatus, etc. The only book of its kind. Simple as A B C.

ELECTRIC TRANSMISSION HAND-BOOK. By Lieut. F. B. Badt. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables. Gives more practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants. A practical and reliable work.

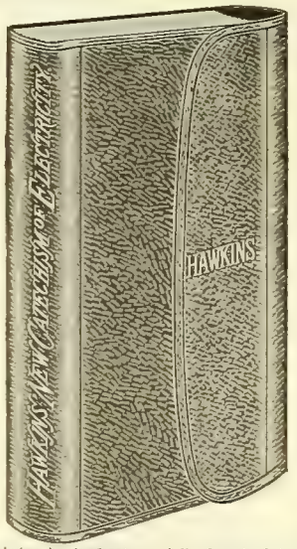
THE TELEPHONE HAND-BOOK. By Herbert Laws Webb. 146 pages, 138 illustrations, cloth, hand-book size, price $1.00. Extract from preface: "This little book has no pretension to be considered a complete treatise on telephony as it exists in America." The time for such a work has not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and The Telephone Hand-Book is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country. No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

Price, $1.00 Each, Postage Prepaid.

ELECTRICIAN PUBLISHING CO.,
510 Marquette Bldg., Chicago.

HAWKINS' NEW CATECHISM OF **ELECTRICITY.**
A PRACTICAL TREATISE.

TESTIMONIAL. Chas. M. Weir, Chief Engineer U. S. Projectile Works, Brooklyn, N. Y.: "It is one of the most practical and concise works on the subject I ever saw. It is just the right thing in the right place, and I most cheerfully recommend it to all who desire a practical knowledge of Electricity."



This is a book of 550 pp., full of up-to-date information. 300 illustrations. Handsomely bound in red leather, pocketbook form, size 4½x6½, with titles and edges in gold. Price, $2.00, postpaid. 100 page descriptive catalogue of electrical books free on request.

"WONDERLAND 1904"

Published by the **Northern Pacific** and sent by A. M. Cleland, Ass't G. P. & T. A., St. Paul, Minn., to any address for six cents—the postage—describes the **Hunting** and **Fishing** in the Northwest; shows what vast quantities of **Lignite Coal**, the poor man's fuel, underlie western North Dakota and how rapidly and easily it is now mined; has a long chapter on **Yellowstone Park** and the reduced rates now in effect and the many improvements made by the Government; recounts what others say of the N. P. R's Crack Train the **"North Coast Limited;"** tells about **Irrigation** in the **Yellowstone** and **Yakima** valleys, the two largest irrigable valleys in the **Northwest**, and deals with some phases of the renowned exploration of **Lewis** and **Clark** across the continent 100 years ago. The book is descriptive, historical, wholesome and good for pastime reading and for future reference. Suitable for office, library, school and class room, travel and vacation.

ONLY SIX CENTS—SEND FOR IT!

THE
Kellogg Switchboard & Supply Company

Announces to its customers that the combined drop and jack manufactured by the Kellogg Switchboard and Supply Company does not infringe the alleged patents of the Western Telephone Manufacturing Company and that this company is prepared to defend its customers against all suits on apparatus furnished by us.

PRACTICAL FEATURES OF TELEPHONE WORK.
By A. E. DOBBS.
Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft	½	257 r. p. m.	1750	95%	730%
213 ft	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

Keep Up With the Procession.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

ALLSOP, F. C.—Electrical Bell Construction: Treatise on the Construction of Electric Bells, Indicators and similar apparatus. 177 illustrations.....$1.25

ATKINSON, PHILIP.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

ATKINSON, PHILIP.—The elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

AYRTON, W. E.—Practical Electricity: a Laboratory and Lecture Course for First-year Students of Electrical Engineering. Based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

BADT, LIEUT F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

BADT, LIEUT. F. B.—Incandescent Wiring Hand Book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

BADT, LIEUT. F. B.—Bell Hangers' Hand Book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.....$1.00

BADT, LIEUT. F. B.—Electric Transmission Hand Book. First edition, 3,000 copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more Practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

BEDELL, FRED'K AND ALBERT C. CREHORE.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 113 illustrations.....$2.50

BELL, LOUIS, PH. D.—The Art of Illumination. This is the only book in the language which deals directly with the scientific and artistic use of modern illuminants, electric and other. Cloth, 339 pages, 127 illustrations. Price.....$2.50

BONNEY, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations, 208 pages. 12mo. cloth....$1.25

BOTTONE, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand Book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

BOTTONE, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

BOTTONE, S. R.—Electro-Motors How Made and How Used. A Hand Book for Amateurs and Practical Men. Reduced to.....$0.50

BUCKLEY, W. J.—Electric Lighting Plants, Their Cost and Operation. 275 pages, many illustrations and diagrams. Paper.....$1.00

CROCKER, F. B. AND WHEELER, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

CUSHING, H. C., JR.—Standard Wiring for Electric Light and Power. A compilation of formulæ, rules and requirements from the most modern practice, and in accordance with the rules and requirements of the Boston Fire Underwriters' Union, the New England Insurance Exchange, and as recommended by the Underwriters' International Electric Association. 12mo, leather.....$1.00

DESMOND, CHAS.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with, Alternate Electric Currents. Illustrated. Revised edition.....$2.50

DORBS, A. E.—The Inspector and Trouble Man. A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards. 106 pages. Price...$1.00

DYER, A.—Induction Coils, How Made and How Used. Third edition. Boards.....$0.50

FLEMING, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations..$1.50

FLEMING, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents. 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents. 8vo, cloth. London, 1892.....$5.00

GAYETTY, J. W.—Motorman's Guide. A Practical Treatise on Street Railway Motors. Illustrations and diagrams. Cloth.....$0.50

GORDON.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations..$2.00

GORE, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

GRIER, THOS. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.....$1.00

HASKINS, C. C.—Electricity Made Simple. 233 pages, 108 illustrations. Paper covers.....$0.50
A valuable, non-technical work for those whose opportunities for gaining information on the branches treated have been limited.

HASKINS, C. H.—The Galvanometer and Its Uses. A Manual for Electricians and Students. Fourth edition; revised.....$1.50

HASKINS.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

HAWKINS, C. C. AND F. WALLIS.—The Dynamo, Its Theory, Design and Manufacture. 190 illustrations.$3.00

HAWKINS, N.—New Catechism of Electricity. A Practical Treatise Relating to the Dynamo and Motor, Wiring, the Electric Railway, Bell Fitting, etc., etc. Red leather, pocketbook form. 95 illustrations....$2.00

HOMANS, J. E., A. M.—A. B. C. OF THE TELEPHONE. 352 pages, 269 illustrations. Price.....$1.00
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

HOPKINS, GEO. M.—Experimental Science. Elementary, Practical and Experimental Physics. 650 illustrations.....$4.00

HOPKINSON.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

HOPKINSON, DR. JOHN.—Dynamic Electricity; Its Modern Use and Measurements, Chiefly in Its Application to Electric Lighting and Telegraphy.....$0.50

HORSTMANN, H. C. AND VICTOR H. TOUSLEY.—Modern Wiring Diagrams and Descriptions. A Hand Book of Practical Diagrams and Information for Electrical Workers. 160 pages, over 200 illustrations. Full leather binding, pocket size 4x6.....$1.50

HOSPITALIER, E.—Domestic Electricity for Amateurs; Translated from the French, with additions by C. J. Wharton. With illustrations.....$2.50

HOUSTON, EDWIN J.—A Dictionary of Electrical Words, Terms and Phrases. Fourth edition, greatly enlarged, with over 6,000 additional words and definitions. 2 volumes, 1,000 pages.....$6.00

KAPP, GISBERT.—Electric Transmission of Energy and Its Transformation, Subdivision and Distribution. A practical hand book. Fourth edition.....$3.00

KAPP, GISBERT.—Alternate Current Machinery. Illustrated.....$0.50
(Vol. 96 Van Nostrand's Science Series.)

KAPP, GISBERT.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

KEMPE, H. R.—A Hand Book of Electrical Testing. Fifth edition 200 illustrations 8vo, cloth London 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

KEMPE, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables, and Data. 32mo, leather.....$1.75

LOCKWOOD, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Hand Book of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations.....$2.50

LOCKWOOD, T. D.—Electrical Measurement and the Galvanometer; Its Construction and Use. Second edition.....$1.50

LYNDON, L.—Storage Battery Engineering. A Practical Treatise for Engineers. This is a practical work, intended for the electrical engineer who is called on to design and install storage battery equipments, or who has a battery power plant under his care. Cloth. 360 pages, 178 illustrations and diagrams, 4 large folding plates. Price.....$3.00

MEADOWCROFT, W. H.—The A, B, C of Electricity. 36 illustrations. 12mo, cloth. New York.....$0.50

MAYER AND DAVIS, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

MEYER, HENRY, C., JR., M. E.—Steam Power Plants, Their Design and Construction. Cloth. 165 pages, 63 illustrations, 15 folding plates. Price.....$2.00

MILLER, KEMPSTER B.—American Telephone Practice. 518 large octavo pages, 379 illustrations.....$3.00
This book treats of the subject in a simple and comprehensive manner from the practical standpoint, and almost entirely without the use of mathematics.

NOLL, AUGUSTUS.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

POPE, FRANKLIN LEONARD.—Modern Practice of the Electric Telegraph. A technical hand book for Electricians, Managers and Operators. 185 illustrations. Fourteenth edition, rewritten and enlarged.....$1.00

PRINDLE, H. B.—A Popular Treatise on the Electric Railway of To-day. Fully illustrated.....$0.25

REED, LYMAN C.—American Meter Practice. This is the only American book dealing with the theory and practice of current metering. Cloth. About 250 pages, illustrated. Price.....$2.00

RUSSELL, STUART A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

SALOMONS, SIR DAVID.—Electric Light Installations. Vol. I. The Management of Accumulators. A Practical Hand Book. Seventh edition, revised and enlarged. With illustrations 12mo. cl. London, 1893.....$1.50

SLOANE, T. O'CONNOR.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of Its Practical Application in every day life. Illustrated.....$1.00

SLOANE, T. O'CONNOR.—The Standard Electrical Dictionary. A popular dictionary of words and terms used in the practice of electrical engineering. 350 illustrations.....$3.00

SLOANE, T. O'CONNOR.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys.....$1.00

SLOANE, T. O'CONNOR.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

STEVENS, H. G.—Mechanical Catechism. For Stationary and Marine Engineers, Firemen, Electricians, Motormen, Ice Machine Men and Mechanics in General. 336 pages, over 240 illustrations. Cloth.....$1.00

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. A series of lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No 66).....$0.50

ELECTRICIAN PUBLISHING CO.,

.....510 Marquette Building, Chicago.....

SOMETHING NEW
IN METERS

An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switch arm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

DUNCAN ELECTRIC MANUFACTURING CO.,

LA FAYETTE, IND., U. S. A.

The Inspector
AND
Trouble Man.
By A. E. DOBBS.

Full of information and diagrams for the operator, exchange owner, exchange manager, inspector, trouble man, lineman.

A complete description of telephones and their troubles. How to find and remedy them, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

This is a practical book, written in **plain language,** and for **anyone** interested in telephony.

Mailed anywhere on receipt of price . . . **ONE DOLLAR.**

No technicalities. Substantially bound in cloth.

ELECTRICIAN PUBLISHING CO.,
510 MARQUETTE BUILDING, CHICAGO.

NATURAL POPULARITY

The popularity of Type K induction wattmeters is not due to any one novel feature of construction.

There are several that merit special mention. Any one of them is a strong talking point.

The strength of the combination lies in the fact that all have been with the meter since its introduction.

They have not been tacked on or lugged in as after thoughts. Among them was:

1—Double lagging for high or low frequency.

2—Mechanical magnetic light-load adjustment unaffected by voltage variation.

3—Direct energy reading; no dial constants.

4—Current capacity up to 300 amperes without series transformers.

There are many other talking points that work and can speak for themselves.

Send for the latest Type K bulletin.

Fessenden Wireless Telegraph System

THE NATIONAL ELECTRIC SIGNALLING CO.

As the result of five years' experimental work, including a working test of a full year, this system is now put on the market as being equal as regards speed and reliability to manually operated wire lines, and superior as regards first cost and maintenance.

This system uses no coherer, the receiver consisting of a minute cylinder of liquid whose resistance is lowered by the heating effect of the electric waves. As it is approximately twenty-five to fifty times as sensitive as the Solari coherer, and is admirably adapted to sharp tuning, much less energy is needed for a given distance, and difficulties from atmospheric disturbances and interference can be overcome.

This system does not infringe the patents of any other company and the operation of the apparatus is guaranteed.

Telegraphic sets for working up to 150 miles over land or up to 350 miles over sea are now standardized and can be supplied from stock or on short notice. Sets for working over longer distances supplied at short notice. Sets can be tested by purchaser before delivery between the company test stations, approximately ninety miles over land, or between the company's marine stations.

THE NATIONAL ELECTRIC SIGNALLING CO.

1737 Riggs Place, Washington, D. C.

50 Cents

ELECTRIC MOTOR

The RIENCO motor runs at high speed when connected to one cell of almost any kind of battery. It rotates in either direction and is reversed without changing connections. It is fitted with grooved pulley. Price 50 cents; postage and packing 15 cents.

THE PERKINS ELECTRIC SWITCH MFG. CO.

. . . VERSUS . . .

THE YOST ELECTRIC MFG. CO.

THE Yost Electric Mfg. Co. now expressly or impliedly admits the correctness of our statements in a recent advertisement, that (a) it succeeded to the business of the Yost Miller Company which made the Dixon socket, recently adjudged by the United States Circuit Court to be an infringement of our Perkins Patent, (b) it took up the defense of the Dixon suit and (c) put out the same socket under the name "Yost." The Yost Electric Mfg. Co. claims, however, that it put out those "Yost" sockets same as the Dixon for a short time only, and that afterwards their socket was changed with the view to avoid infringement.

We are advised by competent counsel that this change in the "Yost" socket does not evade the patent and that the Yost socket remains to-day practically the same as the Dixon. To settle this question we have brought suit against the Yost Electric Mfg. Co., in Toledo, Ohio, for infringement.

In this connection it is pertinent to ask, why has the Yost Electric Mfg Co. now appealed the "Dixon" suit, if its "changed" socket does not infringe the patent?

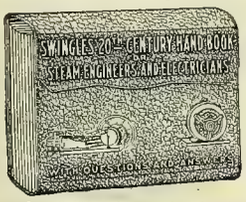
Three Extraordinary Books for Engineers and Electricians

JUST FROM THE PRESS : : : New and Up to Date.

Written by Practical Engineers and Electricians in a language even a child can understand.

The 20th Century Hand Book for Engineers and Electricians.



A compendium of useful knowledge appertaining to the care and management of Steam Engines, Boilers and Dynamos. Thoroughly practical with full instructions. **By C. F. SWINGLE, M. E.** Formerly Chief Engineer of the Pullman Car Works. Late Chief Engineer of the Illinois Car and Equipment Co., Chicago.

ELECTRICAL DIVISION. The electrical part of this valuable volume was written by a practical engineer for engineers, and is a clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Storage Batteries, Indicators and Measuring Instruments.

Swingle's 20th Century Hand Book for Engineers and Electricians. Over 300 illustrations. Handsomely bound in full leather pocket-book style. Size, 5x6¾x1 inch thick. **PRICE NET, $2.50.**

Dynamo Tending for Engineers, Or, Electricity for Steam Engineers,

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY, authors of "Modern Wiring Diagrams and Descriptions for Electrical Workers." This excellent treatise is written by engineers for engineers. The authors have had the co-operation of the best authorities, each in his chosen field, and the information given is just such as a steam engineer should know. To further this information, and to more carefully explain the text, nearly 100 illustrations are used, which, with perhaps a very few exceptions, have been especially made for this book. It teaches just what the steam engineer should know in his engine room about electricity. 12mo, cloth, 100 illustrations. Size 5½x7¾. **PRICE NET, $1.50.**

The most important book on Electrical Construction Work ever issued. Modern

Wiring Diagrams and Descriptions for Electrical Workers.

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY.

This grand little volume not only tells you how to do it, but it shows you.

This book tells how to wire for call and alarm bells.
For burglar and fire alarm.
How to run bells from dynamo current.
How to install and manage batteries.
How to test batteries.
How to test circuits.
How to wire for annunciators, for telegraph, telephone and gas lighting.
It tells how to locate "trouble" and "ring out" circuits.
It tells about meters and transformers.
It contains 30 diagrams of electric lighting circuits alone.
It explains dynamos and motors, alternating and direct current.
It gives 10 diagrams of ground detectors alone.
It gives "Compensator" and Storage Battery installation.
It gives simple and explicit explanation of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing.

It gives a new and simple writing table covering all voltages and all losses or distances, etc.

160 pages. Over 200 illustrations. Full leather binding. Round corners. Red edges. Pocket size, 4 x 6. Price net, $1.50.

Each book sent charges paid to any address upon receipt of price. Your money returned if the books are not as represented.

Electric Light Convention

THE twenty-seventh convention of the National Electric Light Association, perhaps the most important electrical event of the year, will be held in Boston, May 24th to 27th inclusive. It is predicted that this will be the largest and most successful meeting ever held. The association has enrolled hundreds of new members during the past year, and its prospects are brighter than ever before.

As usual the WESTERN ELECTRICIAN will pay special attention to this annual event, and it will be covered by our issues of May 21st, May 28th and June 4th. The issue of May 21st, which will be distributed at the convention, will be a most pleasing one to every central station man and others interested in electric lighting and power work. It will contain specially written articles on up-to-date subjects, and other features which will make it one of the most interesting issues of the year.

Our issues of May 28th and June 4th will contain a complete report of the proceedings.

Every manufacturer and dealer wishing to increase his business should be largely represented in the advertising columns of these important numbers. Realizing the importance of this convention, a number of advertisers have already arranged for space in these issues.

We urge you to take advantage of these important issues, and trust you will reserve a space immediately in order to obtain a choice location.

ADDRESS

Kellogg Switchboard and Supply Co.,

Green and Congress Streets,

CHICAGO.

Electric Building, CLEVELAND.

Keystone Telephone Building, PHILADELPHIA.

THE FIRST COST

Some people when buying switchboard apparatus look at the first cost with both eyes wide open, but look to the future with one eye half open.

The old saying "penny wise and pound foolish" is usually proved to such parties in a way they don't like—of course.

The first cost of our

Generator Call Visual Signal

is somewhat higher than an ordinary or self-restoring drop. It's reasonable that it should be. The additional first cost takes care of the future. Gives as rapid service as any lamp signal system and not half as complicated. Each signal self-contained.

Let us know your requirements

BITUMINIZED FIBRE CONDUIT

FOR

ELECTRICAL UNDERGROUND CONSTRUCTION
ELECTROLYSIS PROOF WATER PROOF

A smooth laminated insulator of unchanging durability.

Forms a continuous sealed duct from manhole to manhole, impervious to moisture and through which leaking gas cannot penetrate.

There has never been a gas explosion in our conduits nor the slightest evidence of electrolysis.

Abrasion of the cables is an impossibility.

It saves sixty per centum of freight and handling cost and twenty to thirty-five per centum of construction.

Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.

All sizes from one inch to ten inches interior diameter. Bends of all angles.

The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

Send for illustrated book. Ask for prices giving size and quantities required

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

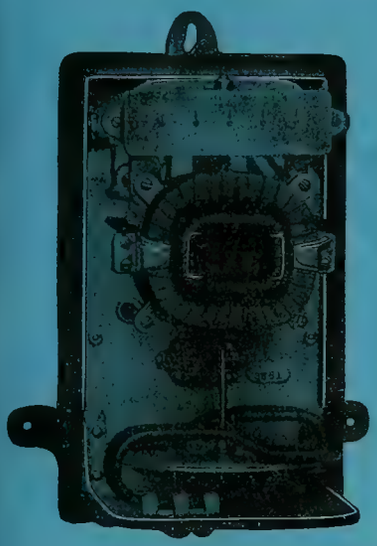
SOMETHING NEW

IN METERS



An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switch arm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

A BOOK OF MERIT

MODERN ELECTRIC RAILWAY MOTORS.

BY GEO. T. HANCHETT, M. E.

FIRST PRACTICAL WORK ON RAILWAY MOTORS.

CONTENTS.—Chapter I.—Forms of Field Magnets. II.—Armature Winding Diagrams. III.—Field Coil Construction and Arrangement. IV.—Armature Construction. V.—Commutator and Brush Holder Construction. VI.—Motor Casings. VII.—Motor Suspensions. VIII.—Bearings and Gears. IX.—Lubrication. X.—General Dimensions and Data. XI.—Management and Repair. XII.—Railway Motor Design.

200 Pages. 157 Illustrations and Table. Price $2.00.

THIS is a book unique in its treatment of electric railway equipment. The first ten chapters are devoted to minute description of the details of electric railway motors that are in use to-day. Each organ of an electric railway motor is taken up in turn, described and illustrated by examples of present and past practice, and its operation explained in the light of practical experience. In short, the review of current practice is of such a nature as to bring out the reason why the electric railway motor is built as it is to-day. For example, field magnets of different types of motors are illustrated and compared, and their features of merit and faults pointed out. Armatures, armature windings, brush holders, suspensions and other details are similarly treated, each detail, however minute, being exhaustively considered. The last two chapters are devoted, one to the management and repair of electric railway motors, and the other to railway motor design, a complete design being worked out as an example. A table gives authoritative data of all types of railway motors in common use, both in America and Europe. **Sent postpaid on receipt of price.**

Talking points that work and working points that talk have made the type K THE POPULAR WATTMETER

Type K induction wattmeters have always been popular with the largest meter users of this country.

This may be due to early appreciation of the fact that Type K meters, from the beginning, contained many original features in meter design that have since been loudly exploited in others as exclusively and uniquely original.

BRASS SHELL SOCKETS

Double Pole, 250 Volts

The accompanying cut illustrates the interior construction of our new Brass Shell Socket, which in view of the modern tendency toward the use of 250-volt circuits, presents features that are highly commendable, it being so constructed as to break the circuit on both poles, which very materially lessens the possibility of an arc forming and being maintained.

They are made of the finest grade of material throughout, the workmanship is of the best, and they meet with the approval of the Fire Underwriters.

Electric Light Convention

THE twenty-seventh convention of the National Electric Light Association, perhaps the most important electrical event of the year, will be held in Boston, May 24th to 27th inclusive. It is predicted that this will be the largest and most successful meeting ever held. The association has enrolled hundreds of new members during the past year, and its prospects are brighter than ever before.

As usual the WESTERN ELECTRICIAN will pay special attention to this annual event, and it will be covered by our issues of May 21st, May 28th and June 4th. The issue of May 21st, which will be distributed at the convention, will be a most pleasing one to every central station man and others interested in electric lighting and power work. It will contain specially written articles on up-to-date subjects, and other features which will make it one of the most interesting issues of the year.

Our issues of May 28th and June 4th will contain a complete report of the proceedings.

Every manufacturer and dealer wishing to increase his business should be largely represented in the advertising columns of these important numbers. Realizing the importance of this convention, a number of advertisers have already arranged for space in these issues.

We urge you to take advantage of these important issues, and trust you will reserve a space immediately in order to obtain a choice location.

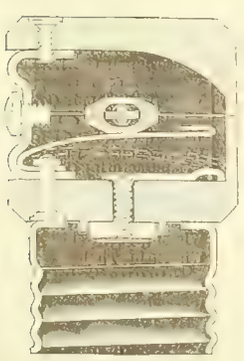
WESTERN ELECTRICIAN

510 MARQUETTE BLDG., CHICAGO

THE YOST ELECTRIC MFG. CO.

VERSUS

The Perkins Electric Switch Mfg. Co.



Sectional View of Interior of Yost Socket.

What the above company claims we admit and what we do admit can only be reconciled in the following manner:

We do not admit that we ever made the Dixon Socket, neither do we admit, but we absolutely deny, that we ever made anything like the Dixon Socket bearing the name "Yost," notwithstanding their claim to the contrary. But what we do admit is, that we are making the Yost Socket under our own patents, and we maintain on good authority, that it is not an infringement on any of their patents.

The Dixon patent is our property, the validity of which has only been assailed, but not determined; therefore, our appeal from the lower Court, which is pertinent to the situation.

When the Perkins Electric Switch Mfg. Co. are in a position to establish as a fact what they assume, then we are willing to abide by the consequences. They are no more ready and willing then we are to have the principles involved passed upon by the Court, and when they assert that we are making Dixon sockets under the name of Yost they misrepresent the facts, and although the purpose is apparent, without a second thought, it may be pertinent to the present situation later, as the Mills grind out results.

We assume all responsibility as to our actions, and will protect our customers fully. Otherwise we ask no favors, and look for none.

YOST ELECTRIC MFG. CO., Manufacturers,
TOLEDO, OHIO.

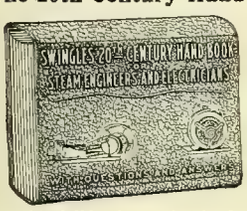
For Underground Wires. The Only Conduit that Improves with Age.
AMERICAN STONE CONDUIT CO., Suite 29. 94 La Salle St., Chicago, Ill.

Three Extraordinary Books for Engineers and Electricians

JUST FROM THE PRESS : : : New and Up to Date.

Written by Practical Engineers and Electricians in a language even a child can understand.

The 20th Century Hand Book for Engineers and Electricians.



A compendium of useful knowledge appertaining to the care and management of Steam Engines, Boilers and Dynamos. Thoroughly practical with full instructions. By C. F. SWINGLE, M. E. Formerly Chief Engineer of the Pullman Car Works. Late Chief Engineer of the Illinois Car and Equipment Co., Chicago.

ELECTRICAL DIVISION. The electrical part of this valuable volume was written by a practical engineer for engineers, and is a clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Storage Batteries, Indicators and Measuring Instruments.

Swingle's 20th Century Hand Book for Engineers and Electricians. Over 300 illustrations. Handsomely bound in full leather pocket-book style. Size, 5x6¾x1 inch thick. PRICE NET, $2.50.

Dynamo Tending for Engineers, Or, Electricity for Steam Engineers,

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY, authors of "Modern Wiring Diagrams and Descriptions for Electrical Workers." This excellent treatise is written by engineers for engineers. The authors have had the co-operation of the best authorities, each in his chosen field, and the information given is just such as a steam engineer should know. To further this information, and to more carefully explain the text, nearly 100 illustrations are used, which, with perhaps a very few exceptions, have been especially made for this book. It teaches just what the steam engineer should know in his engine room about electricity. 12mo, cloth, 100 illustrations. Size 5½x7¾. PRICE NET, $1.50.

The most important book on Electrical Construction Work ever issued. Modern

Wiring Diagrams and Descriptions for Electrical Workers.

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY.

This grand little volume not only tells you how to do it, but it shows you.

This book tells how to wire for call and alarm bells.
For burglar and fire alarm.
How to run bells from dynamo current.
How to install and manage batteries.
How to test batteries.
How to test circuits.
How to wire for annunciators, for telegraph, telephone and gas lighting.
It tells how to locate "trouble" and "ring out" circuits.
It tells about meters and transformers.
It contains 30 diagrams of electric lighting circuits alone.
It explains dynamos and motors, alternating and direct current.
It gives 10 diagrams of ground detectors alone.
It gives "Compensator" and Storage Battery installation.
It gives simple and explicit explanation of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing.

It gives a new and simple writing table covering all voltages and all losses or distances, etc.

160 pages. Over 200 illustrations. Full leather binding. Round corners. Red edges. Pocket size, 4 x 6. Price net, $1.50.

Each book sent charges paid to any address upon receipt of price. Your money returned if the books are not as represented.

FREDERICK J. DRAKE & CO.

Publishers of Self-Educational Books for Mechanics. Madison and Franklin Sts., Chicago, U. S. A.

BITUMINIZED FIBRE CONDUIT

FOR

ELECTRICAL UNDERGROUND CONSTRUCTION
ELECTROLYSIS PROOF WATER PROOF

A smooth laminated insulator of unchanging durability.
Forms a continuous sealed duct from manhole to manhole, impervious to moisture and through which leaking gas cannot penetrate.
There has never been a gas explosion in our conduits nor the slightest evidence of electrolysis.
Abrasion of the cables is an impossibility.
It saves sixty per centum of freight and handling cost and twenty to thirty-five per centum of construction.
Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.
All sizes from one inch to ten inches interior diameter. Bends of all angles.
The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

Keep Up With the Procession.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

ALLSOP, F. C.—Electrical Bell Construction: Treatise on the Construction of Electric Bells, Indicators and similar apparatus. 177 illustrations $1.25

ATKINSON, PHILIP.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages..... $1.50

ATKINSON, PHILIP.—The elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition $2.00

AYRTON, W. E.—Practical Electricity: a Laboratory and Lecture Course for First-year Students of Electrical Engineering. Based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition $2.50

BADT, LIEUT F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches $1.00

BADT, LIEUT. F. B.—Incandescent Wiring Hand Book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches..... $1.00

BADT, LIEUT. F. B.—Bell Hangers' Hand Book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches..... $1.00

BADT, LIEUT. F. B.—Electric Transmission Hand Book. First edition, 3,000 copies. 97 pages, 22 illustrations, 27 original tables..... $1.00
Gives more Practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

BEDELL, FRED'K AND ALBERT C. CREHORE.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations $2.50

BELL, LOUIS, PH. D.—The Art of Illumination. This is the only book in the language which deals directly with the scientific and artistic use of modern illuminants, electric and other. Cloth, 339 pages, 127 illustrations. Price $2.50

BONNEY, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations, 208 pages. 12mo. cloth....$1.25

BOTTONE, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand Book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone $0.50

BOTTONE, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations..... $1.00

BOTTONE, S. R.—Electro-Motors. How Made and How Used. A Hand Book for Amateurs and Practical Men. Reduced to $0.50

BUCKLEY, W. J.—Electric Lighting Plants, Their Cost and Operation. 275 pages, many illustrations and diagrams. Paper $1.00

CROCKER, F. B. AND WHEELER, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged..... $1.00

CUSHING, H. C., JR. Standard Wiring for Electric Light and Power. A compilation of formulæ, rules and requirements from the most modern practice, and in accordance with the rules and requirements of the Boston Fire Underwriters' Union, the New England Insurance Exchange, and as recommended by the Underwriters' International Electric Association. 12mo, leather $1.00

DESMOND, CHAS.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with, Alternate Electric Currents. Illustrated. Revised edition $2.50

DOBBS, A. E.—The Inspector and Trouble Man. A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards. 106 pages. Price...$1.00

DYER, A.—Induction Coils, How Made and How Used. Third edition. Boards $0.50

FLEMING, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations..$1.50

FLEMING, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents. 500 pages, fully illustrated and with copious index. Second edition $3.00
Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents. 8vo, cloth. London, 1892 ..... $5.00

GAYETTY, J. W.—Motorman's Guide. A Practical Treatise on Street Railway Motors. Illustrations and diagrams. Cloth $0.50

GORDON.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations..$2.00

GORE, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition $2.00

GRIER, THOS. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference $1.00

HASKINS, C. C.—Electricity Made Simple. 233 pages, 108 illustrations. Paper covers..... $0.50
A valuable, non-technical work for those whose opportunities for gaining information on the branches treated have been limited.

HASKINS, C. H.—The Galvanometer and Its Uses. A Manual for Electricians and Students. Fourth edition; revised $1.50

HASKINS,—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations..... $1.25

HAWKINS, C. C. AND F. WALLIS.—The Dynamo, Its Theory, Design and Manufacture. 190 illustrations.$3.00

HAWKINS, N.—New Catechism of Electricity. A Practical Treatise Relating to the Dynamo and Motor, Wiring, the Electric Railway, Bell Fitting, etc., etc. Red leather, pocketbook form. 95 illustrations....$2.00

HOMANS, J. E., A. M.—A, B, C OF THE TELEPHONE. 352 pages, 269 illustrations. Price..... $1.00
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

HOPKINS, GEO. M.—Experimental Science. Elementary, Practical and Experimental Physics. 650 illustrations $4.00

HOPKINSON.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated..... $1.00

HOPKINSON, DR. JOHN.—Dynamic Electricity; Its Modern Use and Measurements, Chiefly in Its Application to Electric Lighting and Telegraphy..... $0.50

HORSTMANN, H. C. AND VICTOR H. TOUSLEY.—Modern Wiring Diagrams and Descriptions. A Hand Book of Practical Diagrams and Information for Electrical Workers. 160 pages, over 200 illustrations. Full leather binding, pocket size 4x6..... $1.50

HOSPITALIER, E.—Domestic Electricity for Amateurs; Translated from the French, with additions by C. J. Wharton. With illustrations..... $2.50

HOUSTON, EDWIN J.—A Dictionary of Electrical Words, Terms and Phrases. Fourth edition, greatly enlarged, with over 6,000 additional words and definitions. 2 volumes, 1,000 pages..... $6.00

KAPP, GISBERT.—Electric Transmission of Energy and Its Transformation, Subdivision and Distribution. A practical hand book. Fourth edition..... $3.00

KAPP, GISBERT.—Alternate Current Machinery. Illustrated $0.50
(Vol. 96. Van Nostrand's Science Series.)

KAPP, GISBERT.—Dynamos, Alternators and Transformers. 138 illustrations..... $4.00

KEMPE, H. R.—A Hand Book of Electrical Testing. Fifth edition 200 illustrations. 8vo, cloth. London 1892 ..... $7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

KEMPE, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables, and Data. 32mo, leather $1.75

LOCKWOOD, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Hand Book of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations.....$2.50

LOCKWOOD, T. D.—Electrical Measurement and the Galvanometer; Its Construction and Use. Second edition $1.50

LYNDON, L.—Storage Battery Engineering. A Practical Treatise for Engineers. This is a practical work, intended for the electrical engineer who is called on to design and install storage battery equipments, or who has a battery power plant under his care. Cloth. 360 pages, 178 illustrations and diagrams, 4 large folding plates. Price $3.00

MEADOWCROFT, W. H.—The A, B, C of Electricity. 36 illustrations. 12mo, cloth. New York..... $0.50

MAYER AND DAVIS, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations..... $1.50

MEYER, HENRY, C., JR., M. E.—Steam Power Plants, Their Design and Construction. Cloth. 165 pages, 63 illustrations, 15 folding plates. Price..... $2.00

MILLER, KEMPSTER B.—American Telephone Practice. 518 large octavo pages, 379 illustrations..... $3.00
This book treats of the subject in a simple and comprehensive manner from the practical standpoint, and almost entirely without the use of mathematics.

NOLL, AUGUSTUS.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated..... $1.50

POPE, FRANKLIN LEONARD.—Modern Practice of the Electric Telegraph. A technical hand book for Electricians, Managers and Operators. 185 illustrations. Fourteenth edition, rewritten and enlarged..... $1.50

PRINDLE, H. B.—A Popular Treatise on the Electric Railway of To-day. Fully illustrated..... $0.25

REED, LYMAN C.—American Meter Practice. This is the only American book dealing with the theory and practice of current metering. Cloth. About 250 pages, Illustrated. Price $2.00

RUSSELL, STUART A.—Electric Light Cables and Distribution of Electricity. 107 illustrations..... $2.25

SALOMONS, SIR DAVID.—Electric Light Installations. Vol 1. The Management of Accumulators. A Practical Hand Book. Seventh edition, revised and enlarged. With illustrations. 12mo, cl. London, 1893..... $1.50

SLOANE, T. O'CONNOR.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of Its Practical Application in every day life. Illustrated $1.00

SLOANE, T. O'CONNOR.—The Standard Electrical Dictionary. A popular dictionary of words and terms used in the practice of electrical engineering. 350 illustrations $3.00

SLOANE, T. O'CONNOR.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys $1.00

SLOANE, T. O'CONNOR.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised..... $1.00

STEVENS, H. G.—Mechanical Catechism. For Stationary and Marine Engineers, Firemen, Electricians, Motormen, Ice Machine Men and Mechanics in General. 336 pages, over 240 illustrations. Cloth..... $1.00

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. A series of lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66)..... $0.50

THOMPSON, SYLVANUS P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of..... $3.50

THOMPSON, SYLVANUS P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75)..... $0.50

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. Eighth edition, revised and rewritten. Numerous illustrations and 19 plates. Nearly 1,000 pages..... $6.00

THURSTON, PROF. R. H.—Stationary Steam Engines, Especially Adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates $2.50

TREVERT.—How to Make Electric Batteries at Home. Illustrated $0.25

URQUHART.—Electro-Plating. A Practical Hand Book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions..... $2.00

WALKER, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98)..... $0.50

WEBB, H. L.—A Practical Guide to the Testing of Insulated Wires and Cables. Illustrated..... $1.00

WEBB, HERBERT LAWS.—Telephone Hand Book. Illustrated. 12mo, cloth. Chicago, 1895..... $1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

WEBER.—The Handy Vest Pocket Electrical Dictionary. Cloth $0.25
Leather $0.50

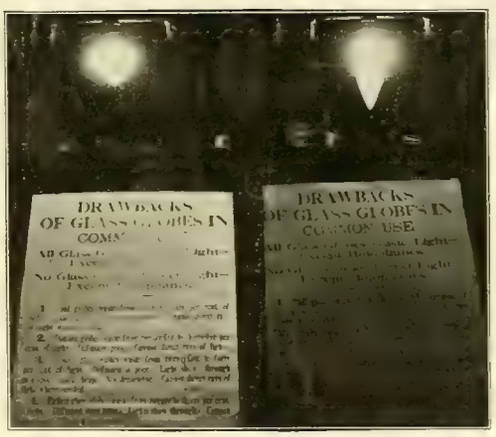
GAS & ELECTRIC FIXTURES FOR THE TRADE.
CATALOG SENT PREPAID TO DEALERS MENTION THIS PAPER.

This cut is made from an untouched photograph of two 16-candlepower Edison lamps. The one on the left is enclosed in a **Holophane** scientific prismatic globe No. 3350; the other in an ordinary opaline globe. A partition was placed between the two lights and the two illuminated surfaces, so that only one exposure was necessary.



HAVE YOU SEEN

The Holophane Booth in Section 25, Electricity Building, St. Louis, which represents an expenditure of nearly $30,000?

DO YOU KNOW

Why all the offices of the Department of Electricity at the World's Fair are equipped with Holophane Globes and Pagoda Reflectors? Ask Prof. Goldsborough, chief of the Department of Electricity at the Louisiana Purchase Exposition, why he selected Holophanes.

WANTED.

Three experienced incandescent lamp salesmen by an old and well-established company not in the trust. Applicants will please state age, experience and salary wanted. Address BOX 199, care Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

Bids for the street lighting of the City of Pana for 83 arcs will be received by the City Clerk until May 30th. M. D ALEXANDER, Chairman Light Committee.

WANTED.

By an Electric Light Company near Chicago, a foreman experienced in the installation of underground conduit and electric subways. Address BOX 349, Western Electrician, 510 Marquette Bldg., Chicago, Ill.

WANTED.

Right party for manager of branch office (machinery line) forming throughout the western states. To such a party a good salary and commission is offered if able to purchase a small interest in shape of gold bonds, held by a prominent trust company. Fine opportunity. Fullest investigation. Address BOX 348, care Western Electrician, 510 Marquette Bldg., Chicago, Ill.

WANTED.

40 to 50 K. W. direct connected unit. Must be standard make in first-class condition and a bargain for spot cash. Address, McGUIRE & COBB, Hotel Warner, 33d St. and Cottage Grove Ave., Chicago.

FOR SALE.

An Electric Light Plant in a prosperous Pacific Coast city of 4,000 inhabitants. Gross receipts, $1200 per month. Fuel from mill at $3.00 per day. Address BOX 350, care Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE.

Electric Light Plant situated in county seat close to Chicago. Population 5,000. Long franchise and city contract. No competition. This is a money maker, and business can be largely increased. For particulars write or call on GEO. P. TOWNSEND, care General Electric Co., Chicago, Ill.

FOR SALE.

Owing to a change of system from direct to alternating, we offer bargains in following:

About 40 desk and ceiling fans, 220 volts, all standard makes, in fine shape, some having been used but two months.
One Weston Portable Voltmeter, 2 scales, 0-150 and 0-5 volts with pole changing switch.
One Weston Portable Ammeter, 0-50 amperes, both in fine shape and recalibrated a few months ago.
Lot of 110 and 220 v. A.-B. enclosed arc lamps.
Lot of 220 v. Thomson meters.
One 45 k. w. Edison 220-volt generator
One 40 k. w. Detroit generator.
One 25 k. w. Northern multipolar, 350 r. p. m., fine. All generators have self-oiling bearings, are compound wound, and in first-class condition. Address for prices, terms, etc.

THE EL RENO LIGHT AND POWER CO.
El Reno, Oklahoma.

FOR SALE.

A completely equipped electric light power and heating plant in a city of 2,500 inhabitants. Incorporated under the laws of Illinois. The plant is thoroughly up to date, with complete duplicate equipment, and is constantly increasing its list of consumers. Parties owning the same wish to retire from this line of business and will sell for actual cost, taking part cash and mortgage for balance if desired. Charter, franchises and contracts will go with plant. Inspection of plant invited at any time. Address BOX 351, care Western Electrician, 510 Marquette Building, Chicago, Ill.

"LAKE SHORE" SPECIAL
TO
BOSTON CONVENTION

of National Electric Light Association, meeting May 24, 25, 26, 27, Hotel Vendome.

For the exclusive use of delegates, supplymen and their friends who will attend the above meeting, the

Lake Shore and Michigan Southern Railway
IN CONJUNCTION WITH
New York Central & Hudson River R. R.

will provide a train of special sleeping cars, which, with dining and buffet library cars, it is proposed to run as the first section of the New England Express, leaving Chicago at 2 p. m. Sunday, May 22d, arriving Boston at 5 p. m. Monday.

To enable us to provide desirable sleeping car accommodations for you, please advise us as early as possible what space you will require.

A rate of one and one-third fare for the round trip, on the certificate plan, has been authorized for this meeting, which will also be available leaving Chicago as early as May 20th, and good returning, leaving Boston not later than May 31st. Applications for sleeping car reservations (which should be made early) or any additional information, may be addressed to L. F. Vosburgh, G. A. P. D., 180 Clark Street, Chicago, or

P. S.—"First come first served" on the "lower" berths.

C. F. DALY, Chief Asst. Gen. Pass. Agt., Chicago

The Palace of Electricity

at the St. Louis Exposition is the most interesting department of the big show.

Visitors declare the **AUTOMATIC TELEPHONE EXCHANGE** installed by the **Automatic Electric Company**, of Chicago, in **Section 24**, to be the piece de resistance of this grand collection of electrical devices.

Pay a visit to the "cussless, waitless, out-of-orderless, girlless telephone" while at the Fair.

We introduced successful 4-party lines

50 Cents

ELECTRIC MOTOR

The RIENCO motor runs at high speed when connected to one cell of almost any kind of battery. It rotates in either direction and is reversed without changing connections. It is fitted with grooved pulley. Price 50 cents; postage and packing 15 cents.

Ithaca Electric Novelty Co.
Box 49, Ithaca, N. Y.

EDWARDS AND CO.

The R. E.-A. L. Monitor Bell. (Patented.)

Hammer rod supported in two places and thrown straight out and in by the armature, striking gong on inside, near edge, thus giving a full, clear tone.

All springs made of Phosphor Bronze and so formed that there is least possible strain.

Contacts are platinized, adjustment is made by pressure on the standard which supports one contact. No screws or nuts being used in the adjustment, bell does not get out of order by operation.

Ordinarily the weak point is the pivot, the unreliable one the adjusting screw and nut. As these defects have been eliminated, this bell will stand hard usage and operate under adverse conditions.

The hammer entirely concealed by gong and cannot be tampered with.

It is especially adapted for use on street cars, as in addition to the advantages mentioned, it is dust, insect and moisture proof.

WESTERN ELECTRIC COMPANY,

THE FIRST COST

Some people when buying switchboard apparatus look at the first cost with both eyes wide open, but look to the future with one eye half open.

The old saying "penny wise and pound foolish" is usually proved to such parties in a way they don't like—of course.

The first cost of our

Generator Call Visual Signal

is somewhat higher than an ordinary or self-restoring drop. It's reasonable that it should be. The additional first cost takes care of the future. Gives as rapid service as any lamp signal system and not half as complicated. Each signal self-contained.

PUBLIC NOTICE

is given that the license to manufacture under the patents of the Rolfe Electric Company, heretofore held by the American Electric Fuse Company of Chicago, has been, and is, revoked and said Fuse Company is no longer authorized to manufacture any of the protective devices or apparatus invented or owned by Charles A. Rolfe, or the Rolfe Electric Company, and any corporation, firm or individual purchasing self-soldering heat coils or other devices covered by our patents from any one other than Frank B. Cook or his agents, render themselves liable to suit for infringement of patent.

Frank B. Cook, 240 W. Lake Street, Chicago, now has an exclusive license to manufacture and sell all self-soldering heat coils and other circuit protecting devices and apparatus covered by our patents and applications for patents, as well as any devices of that kind, which may hereafter be invented by Charles A. Rolfe or owned and controlled by the Rolfe Electric Company.

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

The Place to Found a Colony

Are you looking for a place to found a colony—a little haven far from the noise and bustle and nerve-racking competition of the city, where, surrounded by your friends, you can put into practice the doctrines you believe in?

If you are, you should investigate Arkansas. Land is cheap there—$5 an acre and up. The soil is rich and rainfall abundant. Grapes, pears, peaches and apples grow as nowhere else. Cotton is profitable. There is money to be made in hogs and poultry. A great deal of the State is well wooded, offering a good field for small factories—spokes, hubs, wagon tongues, oars, etc. The country, especially the western half is not very thickly settled, and so it is quite an easy matter to find a tract of land where ten, twenty or thirty families can settle in a body.

Almost all of Arkansas is—or at one time was—covered with timber. The country west of Little Rock, traversed by the Rock Island System, is hilly and broken, and for that reason is not particularly adapted for ordinary farming. The hardwood timber still stands, and, in many cases, its value is greater than the price of the land.

Lands having a southern exposure are excellent for grapes. They ripen early, and are it is claimed, as good as any in Europe.

The Rock Island System is anxious to increase the population of Central and Western Arkansas, and will gladly render any assistance in its power to those who are interested.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Torrent; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures. Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo: The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel. Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

Orders for above book, or any electrical work published promptly sent on receipt of price, postage prepaid.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

SOMETHING NEW
IN METERS

An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switch arm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

DUNCAN ELECTRIC MANUFACTURING CO.,

LA FAYETTE, IND., U. S. A.

The Inspector
AND
Trouble Man.
By A. E. DOBBS.

Full of information and diagrams for the operator, exchange owner, exchange manager, inspector, trouble man, lineman.

A complete description of telephones and their troubles. How to find and remedy them, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

This is a practical book, written in **plain language**, and for **anyone** interested in telephony.

Mailed anywhere on receipt of price . . . **ONE DOLLAR.**

No technicalities. Substantially bound in cloth.

ELECTRICIAN PUBLISHING CO.,

510 MARQUETTE BUILDING, CHICAGO.

TYPE K
FOUNDATIONS

The success and popularity of our Type K single phase integrating induction Wattmeters has been won by uniform good behavior in long service.

This means permanent accuracy of registration of light loads, full loads and over loads, either inductive or non-inductive.

The ease with which the Type K is changed for operation at different frequencies is notable. It is done by making or breaking a single connection easily accessible.

Contemplated changes of system from 140 to 60 cycles can be made with no thought of meter expense if Type K meters are on the lines.

SINGLE PHASE TYPE K meters are well known and deservedly popular.

MULTIPHASE TYPE K meters are built on the same principles as the single phase meter and have the same elements of popularity.

Correspondence is invited.

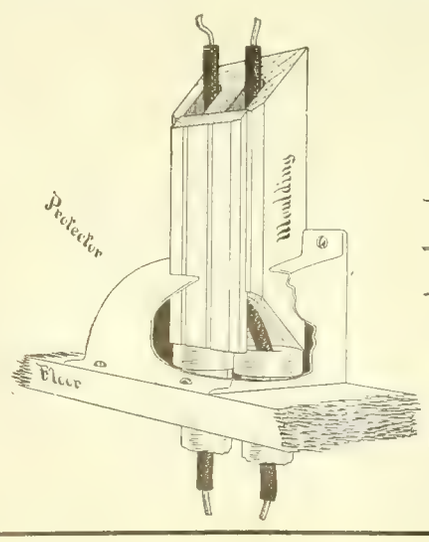
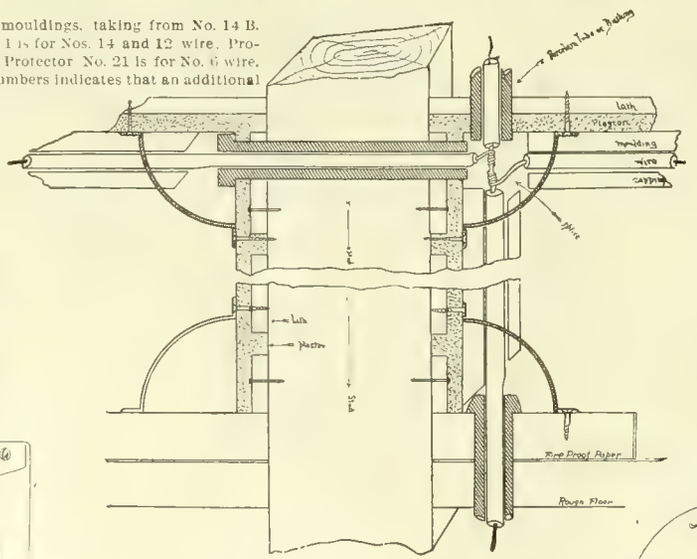
New York Boston Chicago San Francisco

The Gleason Tube Protector

Protectors in stock are for three sizes of mouldings, taking from No. 14 B. & S. gauge to No. 6 B. & S. Protector No. 1 is for Nos. 14 and 12 wire. Protector No. 11 takes Nos. 8 and 10, and Protector No. 21 is for No. 6 wire. An increase of one unit on any of these numbers indicates that an additional strip or circuit enters the same protector in the same direction from single to four gangs. The letter "A" indicates that the protector is for two-wire moulding, and the letter "B" indicates that it is for three-wire moulding.





as its name implies and as shown in the cuts, is designed to protect insulating tubes from mechanical injury where passing through floors in connection with so-called "moulding work;" and also to furnish sufficient area and concealment for splicing at junction of ceilings and partitions where an ordinary mitre joint would not cover the splices or conceal the breakage of woodwork or plaster caused by boring for tubes. These protectors are made of cast iron, japanned for use at floors, and can be furnished of sheet metal to match finish of hardware or fixtures for use at ceilings. Provisions are made for recesses opposite each other to admit two strips meeting at right angles on the "Angle" Protector (cut of which is not shown but can be understood from the cross section).

SECOND VICTORY FOR WHITNEY INSTRUMENTS

May 9th, 1904, Judge Lacombe of the United States Circuit Court, Southern District of New York, **DENIES the application for preliminary injunction made by Weston Electrical Instrument Company** against the Whitney Electrical Instrument Company because of alleged infringement of Weston Patent No. 392,387, held as valid against the Jewell Electrical Instrument Co. and on which a preliminary injunction was subsequently granted against the Keystone Electrical Instrument Co.

(The first victory was on October 16th, 1903, when Judge Lacombe of the United States Circuit Court for the Southern District of New York, **dismissed the suit** brought by the Weston Electrical Instrument Co. against the Whitney Electrical Instrument Co. for alleged infringement of Weston Patent No. 446,489 supposed to broadly cover the Weston instruments, and **assessed the costs of the suit on the Weston Electrical Instrument Co.**)

Buyers and users of Whitney instruments are perfectly safe and need fear no interference in spite of any threatening and intimidating communications which they may receive.

A DIFFERENCE IN STANDARDS

is what makes

A Mexican Dollar a poor substitute for a **United States Dollar**

and it's the same difference, as applied to the measurement of electrostatic capacity that makes a telephone cable rated by the

Inferior Standard of **Mutual** Electrostatic Capacity

a poor substitute for one of an equal number of microfarads rated by the

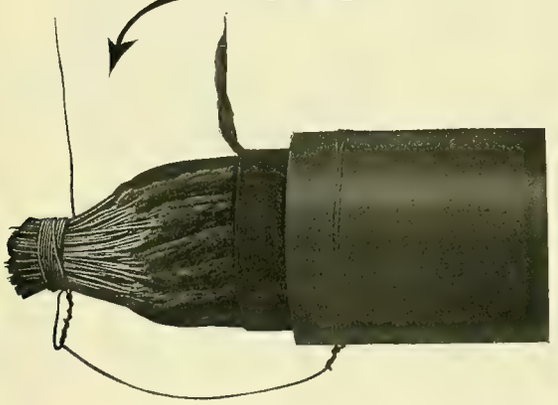
Regular Standard of Electrostatic Capacity

But ignorance of this difference or the use of specifications lacking definiteness as to the manner of making tests allows unscrupulous sellers to take advantage of the confidence you repose in them

AND

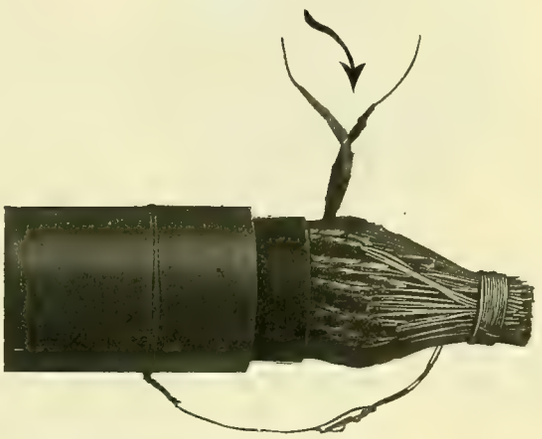
although you pay for, and are therefore entitled to receive, this regular old trade standard

.08



you may get this cable (known to the trade for years as .12 mf.) which by an **inferior standard** is also rated

.08



The relative talking merit of the two cables is

100 —to— **66**

and relative cost of manufacture

$1.00 —against— 85c to 90c

THAT'S WHY IT'S DOLLARS IN YOUR POCKET TO SPECIFY

Average REGULAR Electrostatic Capacity measured "one wire against all the rest grounded to the sheath,"

OR

Average MUTUAL Electrostatic Capacity measured "between the wires of a pair when all the remaining wires are grounded to the sheath,"

And to test your cables to see that the Specifications are being complied with.

The same cables measured by the two methods show the following results:

Average Regular Electrostatic Capacity		Average Mutual Electrostatic Capacity
.08 mf.	equals	.054 mf.
.10 mf.	equals	.066 mf.
.12 mf.	equals	.08 mf.

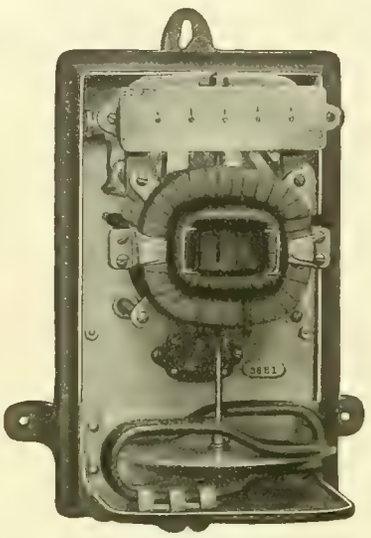
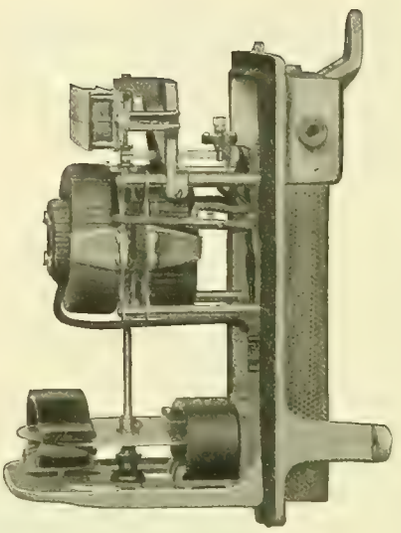
WATTMETERS





COMBINE THE
NEWEST FEATURES
OF THE METER ART

"A FAULTLESS METER," CENTRAL STATION MAN'S VERDICT

VISUAL BEARING (something absolutely new); hollow nickel-steel spindle; range of 60% increase in drag; no burning or charring of resistance; fire-proof and dust-proof binding posts; large porcelain direct reading dials; detachable non-tension-changing brushes; artificially aged magnets and commutator; case absolutely dust, insect and moisture proof; threadless jewel post that can be removed and inserted again in an instant; and

An entirely new means of compensating for friction and vibration on light loads by using a small multipoint switch in connection with the compensating coil. By moving the switch arm over the points of contact, any desired range of compensation can be secured instantly.

It is the simplest, quickest and most effective means yet devised and is absolutely permanent. These are some of the new features.

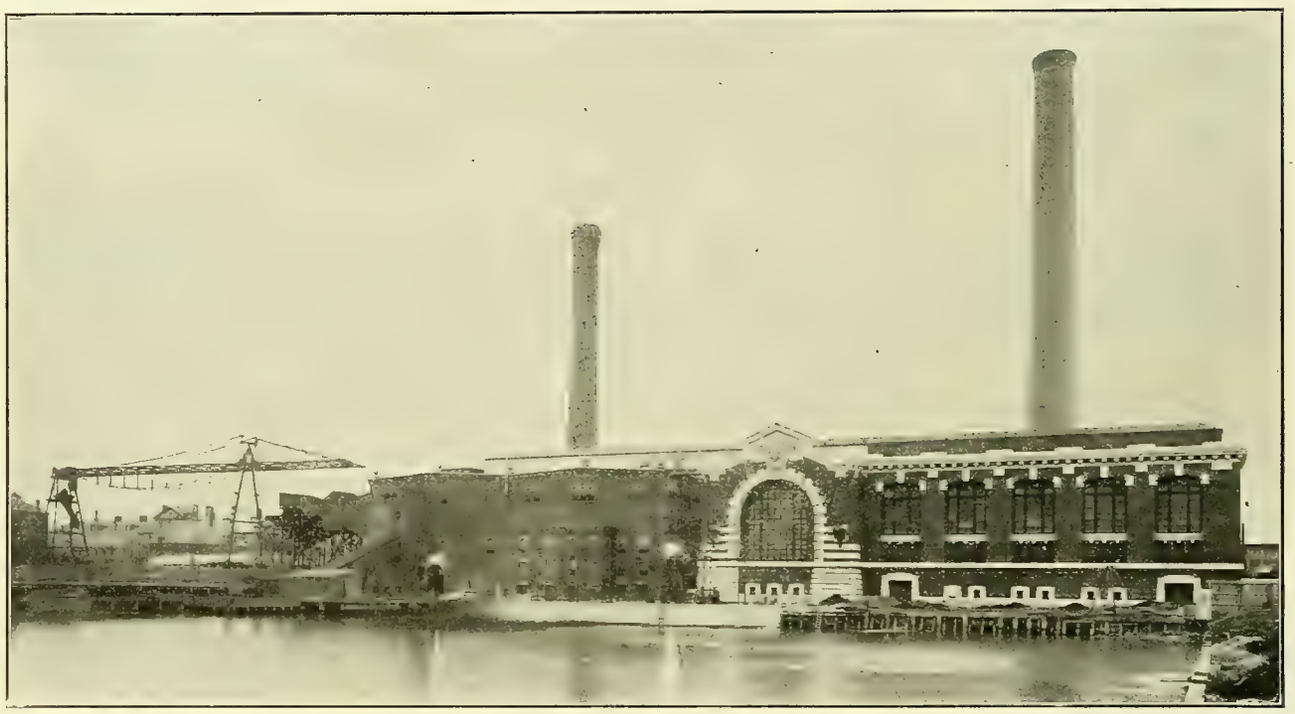
NEW TURBINE STATION

OF THE

Edison Electric Illuminating Company of Boston



This station is located on the N. E. corner of L. Street and E. First Street in South Boston, and is planned for *Twelve 5,000 K. W. Units.* Together with the old station, will have a total capacity of 69,000 K. W. and covers *160,066 square feet of ground.*

Two 5,000 K. W. Turbines are now installed occupying a floor space of 296 square feet each, with a height of 30 feet, being somewhat less than one-half the space occupied by one of the 1,500 K. W. units now installed in the old station.

The present coal-storage capacity at this station is 70,000 tons, capable of being increased to twice that amount.

THE EXHIBITION DEPARTMENT

OF THE

Edison Electric Illuminating Company of Boston

One of the objects which the Edison Co. of Boston had in view in opening this department, was to furnish the manufacturers of electrical apparatus an opportunity to show their product *free of charge,* and under *the most favorable conditions.*

The exhibit is open to the public; is vigorously advertised, and is visited by thousands.

All manufacturers will be allowed space as far as the capacity of the department will permit.

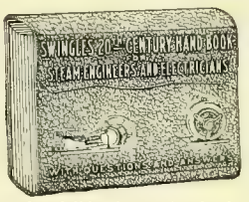
Three Extraordinary Books for Engineers and Electricians

JUST FROM THE PRESS : : : New and Up to Date.

Written by Practical Engineers and Electricians in a language even a child can understand.

The 20th Century Hand Book for Engineers and Electricians.



A compendium of useful knowledge appertaining to the care and management of Steam Engines, Boilers and Dynamos. Thoroughly practical with full instructions. **By C. F. SWINGLE, M. E.** Formerly Chief Engineer of the Pullman Car Works. Late Chief Engineer of the Illinois Car and Equipment Co., Chicago.

ELECTRICAL DIVISION. The electrical part of this valuable volume was written by a practical engineer for engineers, and is a clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Storage Batteries, Indicators and Measuring Instruments.

Swingle's 20th Century Hand Book for Engineers and Electricians. Over 300 illustrations. Handsomely bound in full leather pocket-book style. Size, 5x6¾x1 inch thick. **PRICE NET, $2.50.**

Dynamo Tending for Engineers, Or, Electricity for Steam Engineers,

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY, authors of "Modern Wiring Diagrams and Descriptions for Electrical Workers." This excellent treatise is written by engineers for engineers. The authors have had the co-operation of the best authorities, each in his chosen field, and the information given is just such as a steam engineer should know. To further this information, and to more carefully explain the text, nearly 100 illustrations are used, which, with perhaps a very few exceptions, have been especially made for this book. It teaches just what the steam engineer should know in his engine room about electricity. 12mo, cloth, 100 illustrations. Size 5½x7¾. **PRICE NET, $1.50.**

The most important book on Electrical Construction Work ever issued. Modern

Wiring Diagrams and Descriptions for Electrical Workers.

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY.

This grand little volume not only tells you how to do it, but it shows you.

This book tells how to wire for call and alarm bells.
For burglar and fire alarm.
How to run bells from dynamo current.
How to install and manage batteries.
How to test batteries.
How to test circuits.
How to wire for annunciators, for telegraph, telephone and gas lighting.
It tells how to locate "trouble" and "ring out" circuits.
It tells about meters and transformers.
It contains 30 diagrams of electric lighting circuits alone.
It explains dynamos and motors, alternating and direct current.
It gives 10 diagrams of ground detectors alone.
It gives "Compensator" and Storage Battery installation.
It gives simple and explicit explanation of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing.

It gives a new and simple writing table covering all voltages and all losses or distances, etc.

160 pages. Over 200 illustrations. Full leather binding. Round corners. Red edges. Pocket size, 4 x 6. Price net, $1.50.

Each book sent charges paid to any address upon receipt of price. Your money returned if the books are not as represented.

AMERICAN STONE CONDUIT CO., Suite 29. 94 La Salle St., Chicago, Ill.

BITUMINIZED FIBRE CONDUIT

FOR

ELECTRICAL UNDERGROUND CONSTRUCTION
ELECTROLYSIS PROOF WATER PROOF

A smooth laminated insulator of unchanging durability.

Forms a continuous sealed duct from manhole to manhole, impervious to moisture and through which leaking gas cannot penetrate.

There has never been a gas explosion in our conduits nor the slightest evidence of electrolysis.

Abrasion of the cables is an impossibility.

It saves sixty per centum of freight and handling cost and twenty to thirty-five per centum of construction.

Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.

All sizes from one inch to ten inches interior diameter. Bends of all angles.

The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

Dear Sir:-

Yours of February 15th received and contents noted. I am very glad, indeed, to be able to say that I think the Holophane Globes are the best in the market. They are certainly giving excellent satisfaction to the Hotel Pfister and I find them a great saving in power. Since placing them in the restaurant, I have had a great many compliments from patrons stating how much better light they receive at the tables than formerly, and I shall indeed be very glad to indorse them to anyone contemplating making a change.

Yours very truly,

A. L. Severance

Fessenden Wireless Telegraph System

THE NATIONAL ELECTRIC SIGNALLING CO.

As the result of five years' experimental work, including a working test of a full year, this system is now put on the market as being equal as regards speed and reliability to manually operated wire lines, and superior as regards first cost and maintenance

This system uses no coherer, the receiver consisting of a minute cylinder of liquid whose resistance is lowered by the heating effect of the electric waves. As it is approximately twenty-five to fifty times as sensitive as the Solari coherer, and is admirably adapted to sharp tuning, much less energy is needed for a given distance, and difficulties from atmospheric disturbances and interference can be overcome.

This system does not infringe the patents of any other company and the operation of the apparatus is guaranteed.

Telegraphic sets for working up to 150 miles over land or up to 350 miles over sea are now standardized and can be supplied from stock or on short notice. Sets for working over longer distances supplied at short notice. Sets can be tested by purchaser before delivery between the company test stations, approximately ninety miles over land, or between the company's marine stations.

The Convention Report

The proceedings of the annual meeting of the National Electric Light Association which will be held in Boston next week, will be of special interest to every central station man. The **Western Electrician** of May 28th and June 4th will contain the report of this important meeting, and it will be the **most complete** report published.

Advertisers will, therefore, find these numbers particularly desirable ones in which to place the merits of their goods before the buyers of the world.

Copy should reach us not later than May 26th for the first report number.

WESTERN ELECTRICIAN,

510 Marquette Building. Chicago.

"LAKE SHORE" SPECIAL
TO
BOSTON CONVENTION

of National Electric Light Association, meeting May 24, 25, 26, 27, Hotel Vendome.

For the exclusive use of delegates, supplymen and their friends who will attend the above meeting, the

Lake Shore and Michigan Southern Railway
IN CONJUNCTION WITH
New York Central & Hudson River R. R.

will provide a train of special sleeping cars, which, with dining and buffet library cars, it is proposed to run as the first section of the New England Express, leaving Chicago at 2 p. m. Sunday, May 22d, arriving Boston at 5 p. m. Monday.

To enable us to provide desirable sleeping car accommodations for you, please advise us as early as possible what space you will require.

A rate of one and one-third fare for the round trip, on the certificate plan, has been authorized for this meeting, which will also be available leaving Chicago as early as May 20th, and good returning, leaving Boston not later than May 31st. Applications for sleeping car reservations (which should be made early) or any additional information, may be addressed to L. F. Vosburgh, G. A. P. D., 180 Clark Street, Chicago, or

P. S —"First come first served" on the "lower" berths.

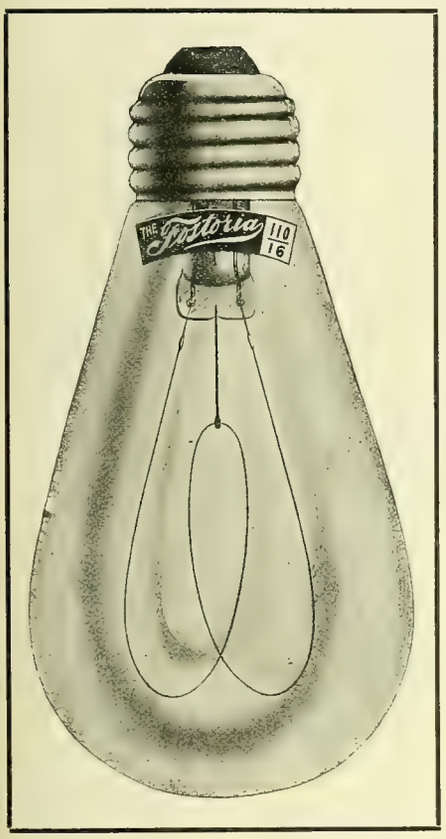
SAY!!!



If you could buy a lamp <u>without a tip</u> that was just as good or better than one with a tip and not "get touched" any harder—what'd you do?

Now, really, what'd you do?

Did you ever hear of a tip doing anybody any good (except the porter)?

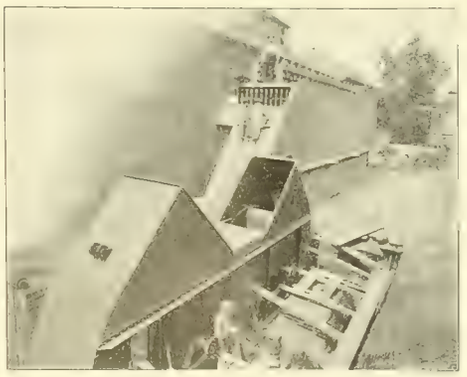
GREEN'S ECONOMIZER

Saves from 10 to 20 per cent. in fuel and insures protection to the boilers.

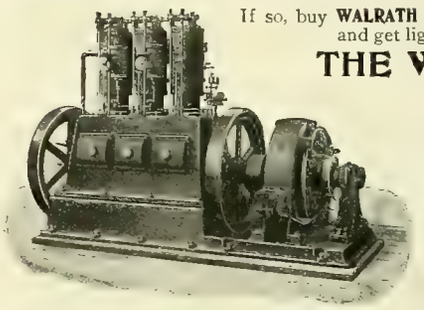
In starting out with these two thoughts firmly impressed upon your mind, we feel a certain confidence that you will not consider the equipping of that Boiler Plant, whether for ELECTRIC LIGHT AND POWER STATION, or for the STATIONARY STEAM BOILER of any character, until you have consulted us. How the gain in fuel is made through use of waste gases, and how the Boilers are protected through the feed water being returned heated to the boiling point, preventing the unequal expansion and contraction, and how the sedimentary deposit being prevented, adds to the heating surface, thus reducing the number of boilers required, is all found in our free booklet—send for it.

The Green Fuel Economizer Co.

Sole Manufacturers in the U. S. A. MATTEAWAN, N. Y.



ARE YOU LOOKING FOR MONEY?



If so, buy **WALRATH GAS OR GASOLINE ENGINES** and get light on the subject.

THE WALRATH

Received the Highest Award at the Pan-American Exposition.

It will produce as good a commercial light as that of an automatic steam engine, either belted or direct-connected generator. Simple, Economical and Reliable.

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1760	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

The Place to Found a Colony

Are you looking for a place to found a colony—a little haven far from the noise and bustle and nerve-racking competition of the city, where, surrounded by your friends, you can put into practice the doctrines you believe in?

If you are, you should investigate Arkansas. Land is cheap there—$5 an acre and up. The soil is rich and rainfall abundant. Grapes, pears, peaches and apples grow as nowhere else. Cotton is profitable. There is money to be made in hogs and poultry. A great deal of the State is well wooded, offering a good field for small factories—spokes, hubs, wagon tongues, oars, etc. The country, especially the western half is not very thickly settled, and so it is quite an easy matter to find a tract of land where ten, twenty or thirty families can settle in a body.

Almost all of Arkansas is—or at one time was—covered with timber. The country west of Little Rock, traversed by the Rock Island System, is hilly and broken, and for that reason is not particularly adapted for ordinary farming. The hardwood timber still stands, and, in many cases, its value is greater than the price of the land.

Lands having a southern exposure are excellent for grapes. They ripen early, and are it is claimed, as good as any in Europe.

The Rock Island System is anxious to increase the population of Central and Western Arkansas, and will gladly render any assistance in its power to those who are interested.

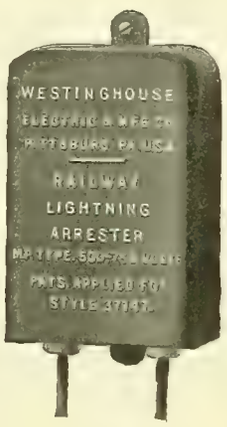
Westinghouse

M. P. Railway Lightning Arresters

For Alternating or Direct Current Circuits



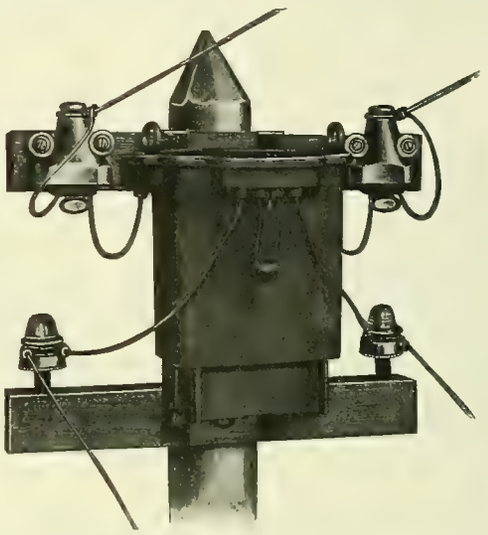
Points of Superiority

Small compact design weighing from ⅓ to ½ less than other arresters, and containing absolutely no moving parts.

Protective power greater than that of other types, combined with an indefinite length of life.

Static discharges distribute themselves over a great number of paths, making the amount passing over any one path extremely small, producing practically no heating nor disintegrating effect.

Type N and O D Transformers



Westinghouse Type N Transformer Attached to Pole

In their design the following points were given paramount consideration:

Efficiency, both all day and full load.

Regulation, both with incandescent and arc lamps, motors or other inductive loads.

Insulation, both for normal operation, and for the extra strains due to lightning.

For particulars address nearest office of

Westinghouse Electric & Mfg. Co.

Three Extraordinary Books for Engineers and Electricians

JUST FROM THE PRESS : : : New and Up to Date.

Written by Practical Engineers and Electricians in a language even a child can understand.

The 20th Century Hand Book for Engineers and Electricians.

A compendium of useful knowledge appertaining to the care and management of Steam Engines, Boilers and Dynamos. Thoroughly practical with full instructions. **By C. F. SWINGLE, M. E.** Formerly Chief Engineer of the Pullman Car Works. Late Chief Engineer of the Illinois Car and Equipment Co., Chicago.

ELECTRICAL DIVISION. The electrical part of this valuable volume was written by a practical engineer for engineers, and is a clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Storage Batteries, Indicators and Measuring Instruments.

Swingle's 20th Century Hand Book for Engineers and Electricians. Over 300 illustrations. Handsomely bound in full leather pocket-book style. Size, 5x6¾x1 inch thick. **PRICE NET, $2.50.**

Dynamo Tending for Engineers, Or, Electricity for Steam Engineers,

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY, authors of "Modern Wiring Diagrams and Descriptions for Electrical Workers." This excellent treatise is written by engineers for engineers. The authors have had the co-operation of the best authorities, each in his chosen field, and the information given is just such as a steam engineer should know. To further this information, and to more carefully explain the text, nearly 100 illustrations are used, which, with perhaps a very few exceptions, have been especially made for this book. It teaches just what the steam engineer should know in his engine room about electricity. 12mo, cloth, 100 illustrations. Size 5½x7¾. **PRICE NET, $1.50.**

The most important book on Electrical Construction Work ever issued. Modern

Wiring Diagrams and Descriptions for Electrical Workers.

By HENRY C. HORSTMANN and VICTOR H. TOUSLEY.

This grand little volume not only tells you how to do it, but it shows you.

This book tells how to wire for call and alarm bells.
For burglar and fire alarm.
How to run bells from dynamo current.
How to install and manage batteries.
How to test batteries.
How to test circuits.
How to wire for annunciators, for telegraph, telephone and gas lighting.
It tells how to locate "trouble" and "ring out" circuits.
It tells about meters and transformers.
It contains 30 diagrams of electric lighting circuits alone.
It explains dynamos and motors, alternating and direct current.
It gives 10 diagrams of ground detectors alone.
It gives "Compensator" and Storage Battery installation.
It gives simple and explicit explanation of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing.

It gives a new and simple writing table covering all voltages and all losses or distances, etc.

160 pages. Over 200 illustrations. Full leather binding. Round corners. Red edges. Pocket size, 4 x 6. Price net, **$1.50.**

Each book sent charges paid to any address upon receipt of price. Your money returned if the books are not as represented.

BITUMINIZED FIBRE CONDUIT

FOR

ELECTRICAL UNDERGROUND CONSTRUCTION
ELECTROLYSIS PROOF WATER PROOF

A smooth laminated insulator of unchanging durability.

Forms a continuous sealed duct from manhole to manhole, impervious to moisture and through which leaking gas cannot penetrate.

There has never been a gas explosion in our conduits nor the slightest evidence of electrolysis.

Abrasion of the cables is an impossibility.

It saves sixty per centum of freight and handling cost and twenty to thirty-five per centum of construction.

Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.

All sizes from one inch to ten inches interior diameter. Bends of all angles.

The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

Send for illustrated book. Ask for prices giving size and quantities required

CHAS. G. MOORE, MANAGER.

March 28th, 1904.

The V. R. Lansingh Company,
207-209-211 Jackson Blvd.,
Chicago, Ills.

Gentlemen:-

Replying to your favor of March 19th, we take pleasure in stating that the installation of Hollophane Globes has been perfectly satisfactory in every detail.

The lighting of our office, dining room, reading room and bar is so far ahead of the old kind of globes, that we feel proud in stating we cannot see how you could be brought in competition with any other globe. As a matter of economy we are convinced that the saving is fully Thirty per cent.

Wishing you success, we remain,

Very respectfully,

THE WINDERMERE CO.

By - Chas. G. Moore

CENTRAL STATION HEATING

We are the originators and builders of the underground system of live and exhaust steam heating. Our system is used for the utilization and distribution of exhaust steam from electric and power plants for heating purposes. 250 Plants in successful operation. We have the only Meter System. Also manufacturers of Wooden Water Pipe, Steam Pipe Casing, Steam Traps, Condensation Meters, Valves, Economizing Coils, Separators and full line of Steam Fitters' Supplies.

A Trip Through Yellowstone Park

is what everyone hopes to have **some day.** It is the most wonderful trip in the world. There are more than 3,000 square miles of weird, marvelous, unimaginable things that can be seen nowhere else, therefore if one ever sees them one **must** go to the Park, in the heart of the magnificent Rockies with snow tipped peaks all around. If Old Faithful geyser, a Paint Pot, Mud Volcano, or Emerald Pool were to be found in Lincoln Park, Chicago; Central Park, New York; or Fairmount Park, Philadelphia; the people would flock to see it or them by tens of thousands For a very small sum, comparatively, all these and hundreds more of nature's unduplicated marvels can be seen between June 1 and September 30 of each year, and one will enjoy, to boot, the best coaching trip in the country.

The **Northern Pacific** folder on Yellowstone Park, just issued, is a new, right up to date, finely illustrated dessertation on this Yellowstone Park trip. It is not descriptive, but deals with the detailed technical matters everyone needs to know about such a trip. It tells all about the hotels, the stage coaches, the roads, the cost of the tour; where the geysers, the waterfalls, the bears, the canyons are, and where the trout fishing is found. We have printed thousands of this beautiful leaflet and want everybody interested to have a copy, and it can be obtained by sending A. M. Cleland, General Passenger Agent, St. Paul, Minn., **two cents** with proper address.

"Wonderland 1904" which is a very fine pamphlet of 116 pages, descriptive of the Northwest, including the Park, will be sent for **six cents.**

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED.

By first-class electrician with vast experience and general knowledge of the electrical machinery with light and power plant, railways, mills, factories or shops; conversant with general repair. Thoroughly understands care, maintenance and economical management of same. Capable of taking charge of any system. Strictly sober and reliable; best reference as to character and ability. Address BOX 354, care Western Electrician, 510 Marquette Building, Chicago.

POSITION WANTED.

As superintendent of electric light or water works plant; have had 16 years' experience in electric light business, and 15 years in handling boilers, engines and water works machinery and understand the business from the coal pile up. Will guarantee results as to economy and service furnished. Address BOX 342, care Western Electrician, 510 Marquette Bldg., Chicago

POSITION WANTED.

By married man: ten years' experience with dynamos, motors, arc lights, transformers, interior wiring and line construction, A.C. or D.C.; also storage batteries. If you want a superintendent that knows, let me hear from you. If you use liquor don't answer. A1 references. I mean business. State salary. Address BOX 355, care Western Electrician, 510 Marquette Bldg., Chicago.

POSITION WANTED.

As superintendent of electric plant. Experienced in both A. C. and D. C. systems and polyphase work, and modern systems of series alternating arc lighting. Can design and construct complete plants. Address BOX 357, care of Western Electrician, 510 Marquette Bldg. Chicago.

POSITION WANTED.

As foreman or superintendent with interior construction company by a capable man with practical experience in the different branches of this work. Can plan work, give estimat and manage large contracts and men advantageously. Strictly temperate and a hustler. Address BOX 352, care Western Electrician, 510 Marquette Bldg., Chicago.

POSITION WANTED.

By a young man of good character, first-class wire man and line man. Have completed course Int. Cor. Schools. Over three years' experience in wiring, line work, installing a. c. and d. c. motors, meters, arc lamps, etc. Can calibrate meters. Best of references and will go anywhere. Good knowledge of engines and boilers and familiar with both a. and d. c. apparatus. Prefer position as chief electrician in plant of about 1,500 k. w. capacity. Will take position as superintendent of small plant. Address BOX 344, care Western Electrician, 510 Marquette Bldg., Chicago.

POSITION WANTED.

Cornell graduate in electrical and mechanical engineering desires change of position. Practical experience includes power plant and shop superintendence; power plant designing and testing; laying out and installing shop equipments; electric and pneumatic power distribution; applications of electricity in manufacturing plants, particularly individual motor drive; estimating; preparation of specifications and correspondence. Broad knowledge of general machinery. Executive and business ability. Excellent references. Satisfactory reasons for desiring change. Could invest small capital. Location, South or West. Address BOX 356, care of Western Electrician.

SALESMEN WANTED.

Salesmen calling on physicians can make big money taking orders for meritorious medical appliance. Every doctor, masseur and hospital needs one. Sells on sight. Sample compact; weighs but 20 ounces. Address S. J. GORMAN, 807 Baltimore Bldg., Chicago.

SALESMEN WANTED.

Reliable men to carry as a side line an up-to-date line of Advertising Calendars, sold to Furniture, Hardware, Drug, Shoe and General Merchants. Convenient to carry; prompt remittances. GEO. H. JUNG & CO., Cincinnati, O.

WANTED.

40 to 50 K. W. direct connected unit. Must be standard make in first-class condition and a bargain for spot cash. Address McGUIRE & COBB, Hotel Warner, 33d St. and Cottage Grove Ave., Chicago.

WANTED.

A second-hand alternating current dynamo Must be cheap. Give all particulars concerning it. W. E. WILLIAMS, 215 S. Clinton Street, Chicago, Ill.

WANTED.

Bids for the street lighting of the City of Pana, Ill., for 83 arcs will be received by the City Clerk until May 30th. M. D. ALEXANDER, Chairman Light Committee.

FOR SALE.

A completely equipped electric light, power and heating plant in a city of 2,500 inhabitants. Incorporated under the laws of Illinois. The plant is thoroughly up to date, with complete duplicate equipment, and is constantly increasing its list of consumers. Parties owning the same wish to retire from this line of business and will sell for actual cost, taking part cash and mortgage for balance if desired. Charter, franchises and contracts will go with plant. Inspection of plant invited at any time. Address BOX 351, care Western Electrician, 510 Marquette Building, Chicago, Ill.

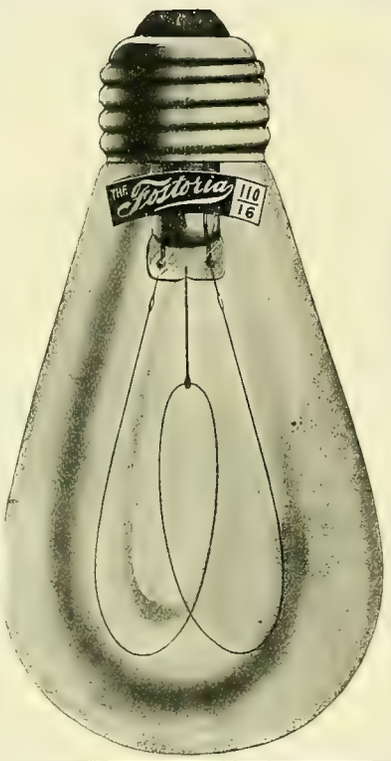
WE KNOW HOW

TO MAKE

TIPLESS LAMPS

We didn't learn how in a minute—and we don't make them like other people have TRIED to make them in the past. Our methods and machines are all covered by patents and so is the lamp.

This lamp is more perfect in mechanical construction than any tip lamp.



A Tipless Lamp has never heretofore been offered to the trade that had actual lamp qualities. We are now ready to furnish you with a tipless lamp that is unexcelled for actual lamp quality at prices which are as low as those of the best tip lamps, and at the same time save you from 3 to 12% loss from broken tips and short life due to cracked and chipped tips.

To the man who wants the very best, this lamp must appeal, because it is the perfection of the modern lamp maker's art. Get our Prices and Booklet

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft	½	257 r. p. m.	1750	95%	730%
213 ft	¾	257 r. p. m.	3000	95%	856%
213 ft	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

The Convention Report

The proceedings of the annual meeting of the National Electric Light Association will be of special interest to every central station man. The **Western Electrician** of June 4th will contain the final report of this important meeting.

Advertisers will, therefore, find this number a particularly desirable one in which to place the merits of their goods before the buyers of the world.

Copy should reach us not later than June 1st for the final report number.

WESTERN ELECTRICIAN,

510 Marquette Building, Chicago.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $3.00.
This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.
A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 269 illustrations. Price $1.00.
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on the subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.
A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price, $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. 136 pp.; illustrated. Price $1.00.

THE TELEPHONE HAND-BOOK
NEW AND REVISED EDITION, WITH A NEW CHAPTER ON "RECENT PROGRESS," BRINGING THE BOOK UP TO DATE.

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

160 Pages, 133 Illustrations, Cloth, Hand-Book Size, Price $1.00.

Extract from Preface.—"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony.
42. Recent Progress. Appendix.

Keep Up With the Procession.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

ALLSOP, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators and similar apparatus. 177 illustrations $1.25

ATKINSON, PHILIP.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

ATKINSON, PHILIP.—The elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition $2.00

AYRTON, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, Based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition $2.50

BADT, LIEUT F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches $1.00

BADT, LIEUT. F. B.—Incandescent Wiring Hand Book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

BADT, LIEUT. F. B.—Bell Hangers' Hand Book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.....$1.00

BADT, LIEUT. F. B.—Electric Transmission Hand Book. First edition, 3,000 copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more Practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

BEDELL, FRED'K AND ALBERT C. CREHORE.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations $2.50

BELL, LOUIS, PH. D.—The Art of Illumination. This is the only book in the language which deals directly with the scientific and artistic use of modern illuminants, electric and other. Cloth, 339 pages, 127 illustrations. Price $2 50

BONNEY, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations, 208 pages. 12mo. cloth....$1.25

BOTTONE, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand Book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone $0.50

BOTTONE, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

BOTTONE, S. R.—Electro-Motors. How Made and How Used. A Hand Book for Amateurs and Practical Men. Reduced to $0.50

BUCKLEY, W. J.—Electric Lighting Plants, Their Cost and Operation. 275 pages, many illustrations and diagrams. Paper $1.00

CROCKER, F. B. AND WHEELER, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

CUSHING, H. C., JR.—Standard Wiring for Electric Light and Power. A compilation of formulæ, rules and requirements from the most modern practice, and in accordance with the rules and requirements of the Boston Fire Underwriters' Union, the New England Insurance Exchange, and as recommended by the Underwriters' International Electric Association 12mo, leather $1.00

DESMOND, CHAS.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with, Alternate Electric Currents. Illustrated. Revised edition $2.50

DOBBS, A. E.—The Inspector and Trouble Man. A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards. 106 pages. Price...$1.00

DYER, A.—Induction Coils, How Made and How Used. Third edition. Boards $0.50

FLEMING, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations..$1.50

FLEMING, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents. 500 pages, fully illustrated and with copious index. Second edition $3 00
Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents. 8vo. cloth. London, 1892 .....$5.00

GAYETTY, J. W.—Motorman's Guide. A Practical Treatise on Street Railway Motors. Illustrations and diagrams. Cloth $0.50

GORDON.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations..$2.00

GORE, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition $2.00

GRIER, THOS. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference $1.00

HASKINS, C. C.—Electricity Made Simple. 233 pages, 108 illustrations. Paper covers.....$0.50
A valuable, non-technical work for those whose opportunities for gaining information on the branches treated have been limited.

HASKINS, C. H.—The Galvanometer and Its Uses. A Manual for Electricians and Students. Fourth edition; revised $1.50

HASKINS.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

HAWKINS, C. C. AND F. WALLIS.—The Dynamo, Its Theory, Design and Manufacture. 190 illustrations.$3.00

HAWKINS, N.—New Catechism of Electricity. A Practical Treatise Relating to the Dynamo and Motor, Wiring, the Electric Railway, Bell Fitting, etc., etc. Red leather, pocketbook form. 95 illustrations....$2.00

HOMANS, J. E., A. M.—A, B, C OF THE TELEPHONE. 352 pages, 269 illustrations. Price.....$1.00
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

HOPKINS, GEO. M.—Experimental Science. Elementary, Practical and Experimental Physics. 650 illustrations $4.00

HOPKINSON.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

HOPKINSON, DR. JOHN.—Dynamic Electricity; Its Modern Use and Measurements, Chiefly in Its Application to Electric Lighting and Telegraphy.....$0.50

HORSTMANN, H. C. AND VICTOR H. TOUSLEY.—Modern Wiring Diagrams and Descriptions. A Hand Book of Practical Diagrams and Information for Electrical Workers. 160 pages, over 200 illustrations. Full leather binding, pocket size 4x6.....$1.50

HOSPITALIER, E.—Domestic Electricity for Amateurs; Translated from the French, with additions by C. J. Wharton. With illustrations.....$2.50

HOUSTON, EDWIN J.—A Dictionary of Electrical Words, Terms and Phrases. Fourth edition, greatly enlarged, with over 6,000 additional words and definitions. 2 volumes, 1,000 pages.....$6.00

KAPP, GISBERT.—Electric Transmission of Energy and Its Transformation, Subdivision and Distribution. A practical hand book. Fourth edition.....$3.00

KAPP, GISBERT.—Alternate Current Machinery. Illustrated $0.50
(Vol. 96 Van Nostrand's Science Series.)

KAPP, GISBERT.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

KEMPE, H. R.—A Hand Book of Electrical Testing. Fifth edition 200 illustrations. 8vo, cloth. London 1892 .....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

KEMPE, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables, and Data. 32mo, leather $1 75

LOCKWOOD, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Hand Book of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations.....$2.50

LOCKWOOD, T. D.—Electrical Measurement and the Galvanometer; Its Construction and Use. Second edition $1.50

LYNDON, L.—Storage Battery Engineering. A Practical Treatise for Engineers. This is a practical work, intended for the electrical engineer who is called on to design and install storage battery equipments, or who has a battery power plant under his care. Cloth. 360 pages, 178 illustrations and diagrams, 4 large folding plates. Price $3.00

MEADOWCROFT, W. H.—The A, B, C of Electricity. 36 illustrations. 12mo, cloth. New York.....$0.50

MAYER AND DAVIS, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

MEYER, HENRY, C., JR., M. E.—Steam Power Plants. Their Design and Construction. Cloth. 165 pages, 63 illustrations, 15 folding plates. Price.....$2.00

MILLER, KEMPSTER B.—American Telephone Practice. 518 large octavo pages, 379 illustrations..... $3.00
This book treats of the subject in a simple and comprehensive manner from the practical standpoint, and almost entirely without the use of mathematics.

NOLL, AUGUSTUS.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

POPE, FRANKLIN LEONARD.—Modern Practice of the Electric Telegraph. A technical hand book for Electricians, Managers and Operators. 185 illustrations. Fourteenth edition, rewritten and enlarged.....$1.50

PRINDLE, H. B.—A Popular Treatise on the Electric Railway of To-day. Fully illustrated.....$0.25

REED, LYMAN C.—American Meter Practice. This is the only American book dealing with the theory and practice of current metering. Cloth. About 250 pages, Illustrated. Price $2.00

RUSSELL, STUART A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

SALOMONS, SIR DAVID.—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand Book. Seventh edition, revised and enlarged. With illustrations. 12mo, cl. London, 1893. .$1.50

SLOANE, T. O'CONNOR.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of Its Practical Application in every day life. Illustrated $1.00

SLOANE, T. O'CONNOR.—The Standard Electrical Dictionary. A popular dictionary of words and terms used in the practice of electrical engineering. 350 illustrations $3.00

SLOANE, T. O'CONNOR.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys $1.00

SOMETHING NEW
IN METERS

An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switch arm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

DUNCAN ELECTRIC MANUFACTURING CO.,

LA FAYETTE, IND., U. S. A.

The Inspector
AND
Trouble Man.
By A. E. DOBBS.

Full of information and diagrams for the operator, exchange owner, exchange manager, inspector, trouble man, lineman.

A complete description of telephones and their troubles. How to find and remedy them, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

This is a practical book, written in **plain language**, and for **anyone** interested in telephony.

Mailed anywhere on receipt of price . . . **ONE DOLLAR.**

No technicalities. Substantially bound in cloth.

ELECTRICIAN PUBLISHING CO.,
510 MARQUETTE BUILDING, CHICAGO.

MULTIPHASE TYPE K WATTMETERS

The multiphase Type K integrating induction Wattmeter is built on the same general principles as the popular single phase Type K.

It has the same characteristics and adjustments, the same symmetrical proportions, the same permanent accuracy on inductive or non-inductive light loads or overloads.

Multiphase Type K secondary meters are furnished for use on 110, 220 or 550 volt 2-phase and 3-phase 3-wire and 2-phase 4-wire 25, 40, 60 or 140 cycle unbalanced circuits in capacities up to 150 amperes without transformers.

Multiphase Type K switchboard meters are furnished with transformers for 1100, 2200 and higher voltages.

Fessenden Wireless Telegraph System

THE NATIONAL ELECTRIC SIGNALLING CO.

As the result of five years' experimental work, including a working test of a full year, this system is now put on the market as being equal as regards speed and reliability to manually operated wire lines, and superior as regards first cost and maintenance.

This system uses no coherer, the receiver consisting of a minute cylinder of liquid whose resistance is lowered by the heating effect of the electric waves. As it is approximately twenty-five to fifty times as sensitive as the Solari coherer, and is admirably adapted to sharp tuning, much less energy is needed for a given distance, and difficulties from atmospheric disturbances and interference can be overcome.

This system does not infringe the patents of any other company and the operation of the apparatus is guaranteed.

Telegraphic sets for working up to 150 miles over land or up to 350 miles over sea are now standardized and can be supplied from stock or on short notice. Sets for working over longer distances supplied at short notice. Sets can be tested by purchaser before delivery between the company test stations, approximately ninety miles over land, or between the company's marine stations.

THE NATIONAL ELECTRIC SIGNALLING CO.

1737 Riggs Place, Washington, D. C.

For Best Results Use the

KNUTSON GRAVITY CLUTCH

Simplest to adjust and cheapest in price on the market.
Cannot bind or stick.
Will pick up to full arc instantly after feeding.
Will not pit a rod and will last the life of lamp.
Saves lamp trimmers time and trouble.

CENTRAL STATION HEATING

We are the originators and builders of the underground system of live and exhaust steam heating. Our system is used for the utilization and distribution of exhaust steam from electric and power plants for heating purposes. 250 Plants in successful operation. We have the only Meter System. Also manufacturers of Wooden Water Pipe, Steam Pipe Casing, Steam Traps, Condensation Meters, Valves, Economizing Coils, Separators and full line of Steam Fitters' Supplies.

BITUMINIZED FIBRE CONDUIT

FOR

ELECTRICAL UNDERGROUND CONSTRUCTION
ELECTROLYSIS PROOF WATER PROOF

A smooth laminated insulator of unchanging durability.

Forms a continuous sealed duct from manhole to manhole, impervious to moisture and through which leaking gas cannot penetrate.

There has never been a gas explosion in our conduits nor the slightest evidence of electrolysis.

Abrasion of the cables is an impossibility.

It saves sixty per centum of freight and handling cost and twenty to thirty-five per centum of construction.

Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.

All sizes from one inch to ten inches interior diameter. Bends of all angles.

The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

Send for illustrated book. Ask for prices giving size and quantities required

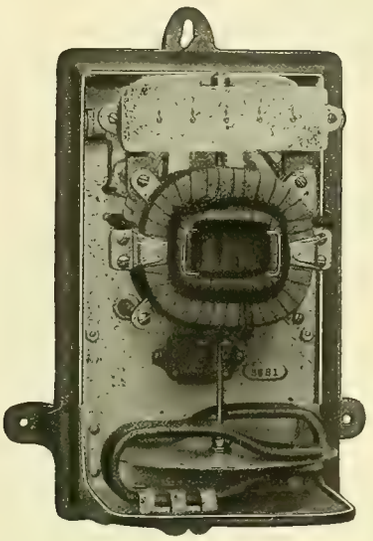
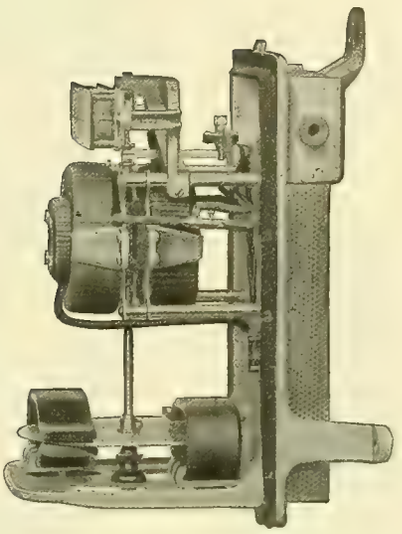
DUNCAN
DIRECT CURRENT
WATTMETERS





COMBINE THE
NEWEST FEATURES
OF THE METER ART

"A FAULTLESS METER," CENTRAL STATION MAN'S VERDICT

VISUAL BEARING (something absolutely new); hollow nickel-steel spindle; range of 60% increase in drag; no burning or charring of resistance; fire-proof and dust-proof binding posts; large porcelain direct reading dials; detachable non-tension-changing brushes; artificially aged magnets and commutator; case absolutely dust, insect and moisture proof; threadless jewel post that can be removed and inserted again in an instant; and

An entirely new means of compensating for friction and vibration on light loads by using a small multipoint switch in connection with the compensating coil. By moving the switch arm over the points of contact, any desired range of compensation can be secured instantly.

It is the simplest, quickest and most effective means yet devised and is absolutely permanent. These are some of the new features.

MANUFACTURED BY THE

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED.

Cornell graduate in electrical and mechanical engineering desires change of position. Practical experience includes power plant and shop superintendence; power plant designing and testing; laying out and installing shop equipments; electric and pneumatic power distribution: applications of electricity in manufacturing plants, particularly individual motor drive; estimating; preparation of specifications and correspondence. Broad knowledge of general machinery. Executive and business ability. Excellent references. Satisfactory reasons for desiring change. Could invest small capital. Location, South or West. Address BOX 356, care of Western Electrician.

POSITION WANTED.

By first-class electrician with vast experience and general knowledge of the electrical machinery with light and power plant, railways, mills, factories or shops; conveyant with general repair. Thoroughly understands care, maintenance and economical management of same. Capable of taking charge of any system. Strictly sober and reliable; best reference as to character and ability. Address BOX 354, care Western Electrician, 510 Marquette Building, Chicago.

POSITION WANTED.

As superintendent of electric light or water works plant; have had 16 years' experience in electric light business, and 18 years in handling boilers, engines and water works machinery and understand the business from the coal pile up. Will guarantee results as to economy and service furnished. Address BOX 342, care Western Electrician, 510 Marquette Bldg., Chicago.

POSITION WANTED.

As superintendent of electric plant. Experienced in both A. C. and D. C systems and polyphase work, and modern systems of series alternating arc lighting. Can design and construct complete plants. Address BOX 357, care of Western Electrician, 510 Marquette Bldg. Chicago.

POSITION WANTED.

All-round electrician of 10 years' experience, making a specialty of meters, motors arc lamps and all kinds of wiring wishes to leave the city and will consider an offer of a steady position with a plant where willingness means advancement. Salary reasonable. Address BOX 359, care Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

40 to 50 K. W. direct-connected unit. Must be standard make in first-class condition and a bargain for spot cash. Address, McGUIRE & COBB, Hotel Warner, 33d St. and Cottage Grove Ave., Chicago.

WANTED.

An electrical engineer graduate of noted technical university, eight years' experience in telephone engineering with prominent Bell company—experience covers inside and outside construction, traffic, theoretical and experimental work—desires a position, executive or engineering, with a large manufacturing or operating telephone company. Best possible references will be furnished. BOX 360, care Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

I have a limited amount of money to invest in an A1 specialty which can be manufactured at small cost and sold at a good profit. Willing to take in partner or buy outright. Article must have merit to receive consideration. Give full particulars. Address BOX 361, care Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE.

An established jobbing and construction house in a good city in the West. Price, $11,000. Owner has not the time to devote to the business. This is an excellent offer and is a splendid opportunity. BOX 358, care Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE.

A completely equipped electric light, power and heating plant in a city of 2,500 inhabitants. Incorporated under the laws of Illinois. The plant is thoroughly up to date, with complete duplicate equipment, and is constantly increasing its list of consumers. Parties owning the same wish to retire from this line of business and will sell for actual cost, taking part cash and mortgage for balance if desired. Charter, franchises and contracts will go with plant. Inspection of plant invited at any time. Address BOX 351, care Western Electrician, 510 Marquette Building, Chicago, Ill.

NOTICE FOR PROPOSALS

Sealed proposals will be received at Kilbourn City, Wis., until 4 p. m., Thursday, June 9th, 1904, for furnishing all labor, material and apparatus necessary for the construction of a complete electric lighting plant for the village of Kilbourn City in accordance with the plans and specifications on file with the village clerk of said village.

All bids must be addressed to the Village Clerk, Kilbourn, Wis., and endorsed on the outside of the envelope, "Bids for Electric Light Plant."

Bidders must deposit a certified check for an amount equal to 3% of their bids.

Copies of the specifications may be seen at the office of L. W. Burch, Engineer, 323 E. Wilson St., Madison, Wis., or at the office of the Village Clerk, Kilbourn, Wis.

The Village Board of said Village reserves the right to reject any or all bids.

By order of the Village Board of said Village.

A. I. BENNETT,
Village Clerk

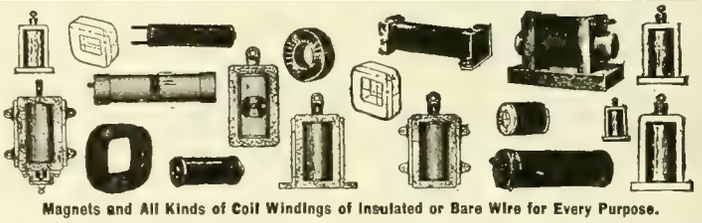
CENTRAL STATION IMPROVEMENT CO., 938 Monadnock Block, CHICAGO.



Magnets and All Kinds of Coil Windings of Insulated or Bare Wire for Every Purpose.
VARLEY DUPLEX MAGNET COMPANY, PROVIDENCE, RHODE ISLAND.

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 13,000 of the new.

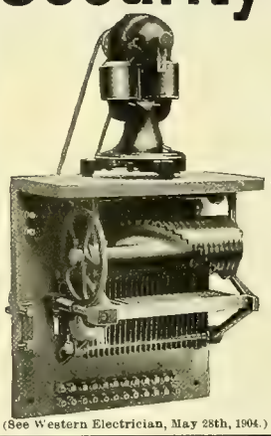
Security Sign Flasher

CHEAP, STRONG, RELIABLE.



That "Good Advertising pays" no one doubts, so the best advertising must *pay better*.

The *best* is the use of electrically illuminated signs, particularly where these illuminations are shifted to different combinations before the spectators. This is accomplished by using a "Security" Flashing Sign Switch.

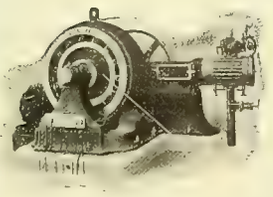
Warren Alternator



In the WARREN ALTERNATOR everything possible has been done for reliability, durability, ease of management and efficiency; everything to avoid burnouts, repairs and excessive cost of operation. The machine is pleasing in appearance, because of good proportions, is massive, strong, of the highest grade of workmanship, and impresses a thoughtful person with its solidity and special adaptation to the most severe, constant and exacting service, a machine constructed for the one sole purpose of EARNING MONEY WITH, AND NOT TO SPEND MONEY UPON.

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

Keep Up With the Procession.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

ALLSOP, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators and similar apparatus. 177 illustrations.....$1.25

ATKINSON, PHILIP.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

ATKINSON, PHILIP.—The elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition $2.00

AYRTON, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, Based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition $2.50

BADT, LIEUT F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches $1.00

BADT, LIEUT. F. B.—Incandescent Wiring Hand Book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

BADT, LIEUT. F. B.—Bell Hangers' Hand Book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.....$1.00

BADT, LIEUT. F. B.—Electric Transmission Hand Book. First edition, 3,000 copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more Practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

BEDELL, FRED'K AND ALBERT C. CREHORE.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations $2.50

BELL, LOUIS, PH. D.—The Art of Illumination. This is the only book in the language which deals directly with the scientific and artistic use of modern illuminants, electric and other. Cloth, 339 pages, 127 illustrations. Price $2.50

BONNEY, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations, 208 pages. 12mo. cloth....$1.25

BOTTONE, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand Book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone $0.50

BOTTONE, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

BOTTONE, S. R.—Electro-Motors. How Made and How Used. A Hand Book for Amateurs and Practical Men. Reduced to $0.50

BUCKLEY, W. J.—Electric Lighting Plants, Their Cost and Operation. 275 pages, many illustrations and diagrams. Paper $1.00

CROCKER, F. B. AND WHEELER, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

CUSHING, H. C., JR.—Standard Wiring for Electric Light and Power. A compilation of formulæ, rules and requirements from the most modern practice, and in accordance with the rules and requirements of the Boston Fire Underwriters' Union, the New England Insurance Exchange, and as recommended by the Underwriters' International Electric Association. 12mo, leather $1.00

DESMOND, CHAS.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with, Alternate Electric Currents. Illustrated. Revised edition $2.50

DOBES, A. E.—The Inspector and Trouble Man. A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards. 106 pages. Price...$1.00

DYER, A.—Induction Coils, How Made and How Used. Third edition. Boards $0.50

FLEMING, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations..$1.50

FLEMING, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents. 500 pages, fully illustrated and with copious index. Second edition $3.00
Synopsis of contents: Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents. 8vo, cloth. London, 1892 .....$5.00

GAYETTY, J. W.—Motorman's Guide. A Practical Treatise on Street Railway Motors. Illustrations and diagrams. Cloth $0.50

GORDON.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations..$2.00

GORE, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition $2.00

GRIER, THOS. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference $1.00

HASKINS, C. C.—Electricity Made Simple. 233 pages, 108 illustrations. Paper covers.....$0.50
A valuable, non-technical work for those whose opportunities for gaining information on the branches treated have been limited.

HASKINS, C. H.—The Galvanometer and Its Uses. A Manual for Electricians and Students. Fourth edition; revised $1.50

HASKINS.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

HAWKINS, C. C. AND F. WALLIS.—The Dynamo, Its Theory, Design and Manufacture. 190 illustrations.$3.00

HAWKINS, N.—New Catechism of Electricity. A Practical Treatise Relating to the Dynamo and Motor, Wiring, the Electric Railway, Bell Fitting, etc., etc. Red leather, pocketbook form. 95 illustrations....$2.00

HOMANS, J. E., A. M.—A, B, C OF THE TELEPHONE. 352 pages, 269 illustrations. Price.....$1.00
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

HOPKINS, GEO. M.—Experimental Science. Elementary, Practical and Experimental Physics. 650 illustrations $4.00

HOPKINSON.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

HOPKINSON, DR. JOHN.—Dynamic Electricity; Its Modern Use and Measurements, Chiefly in Its Application to Electric Lighting and Telegraphy.....$0.50

HORSTMANN, H. C. AND VICTOR H. TOUSLEY.—Modern Wiring Diagrams and Descriptions. A Hand Book of Practical Diagrams and Information for Electrical Workers. 160 pages, over 200 illustrations. Full leather binding, pocket size 4x6.....$1.50

HOSPITALIER, E.—Domestic Electricity for Amateurs; Translated from the French, with additions by C. J. Wharton. With illustrations.....$2.50

HOUSTON, EDWIN J.—A Dictionary of Electrical Words, Terms and Phrases. Fourth edition, greatly enlarged, with over 6,000 additional words and definitions. 2 volumes, 1,000 pages.....$6.00

KAPP, GISBERT.—Electric Transmission of Energy and Its Transformation, Subdivision and Distribution. A practical hand book. Fourth edition.....$3.00

KAPP, GISBERT.—Alternate Current Machinery. Illustrated $0.50
(Vol. 96. Van Nostrand's Science Series.)

KAPP, GISBERT.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

KEMPE, H. R.—A Hand Book of Electrical Testing. Fifth edition 200 illustrations. 8vo, cloth. London 1892 .....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

KEMPE, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables, and Data. 32mo, leather $1.75

LOCKWOOD, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Hand Book of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations.....$2.50

LOCKWOOD, T. D.—Electrical Measurement and the Galvanometer; Its Construction and Use. Second edition $1.50

LYNDON, L.—Storage Battery Engineering. A Practical Treatise for Engineers. This is a practical work, intended for the electrical engineer who is called on to design and install storage battery equipments, or who has a battery power plant under his care. Cloth. 360 pages, 178 illustrations and diagrams, 4 large folding plates. Price $3.00

MEADOWCROFT, W. H.—The A, B, C of Electricity. 36 illustrations. 12mo, cloth. New York.....$0.50

MAVER AND DAVIS, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

MEYER, HENRY, C., JR., M. E.—Steam Power Plants. Their Design and Construction. Cloth. 165 pages, 63 illustrations, 15 folding plates. Price.....$2.00

MILLER, KEMPSTER B.—American Telephone Practice. 518 large octavo pages, 379 illustrations.....$3.00
This book treats of the subject in a simple and comprehensive manner from the practical standpoint, and almost entirely without the use of mathematics.

NOLL, AUGUSTUS.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

POPE, FRANKLIN LEONARD.—Modern Practice of the Electric Telegraph. A technical hand book for Electricians, Managers and Operators. 185 illustrations. Fourteenth edition, rewritten and enlarged.....$1.50

PRINDLE, H. B.—A Popular Treatise on the Electric Railway of To-day. Fully illustrated.....$0.25

REED, LYMAN C.—American Meter Practice. This is the only American book dealing with the theory and practice of current metering. Cloth. About 250 pages, illustrated. Price $2.00

RUSSELL, STUART A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

SALOMONS, SIR DAVID.—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand Book. Seventh edition, revised and enlarged. With illustrations. 12mo, cl. London, 1893.....$1.50

SLOANE, T. O'CONNOR.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of Its Practical Application in every day life. Illustrated $1.00

SLOANE, T. O'CONNOR.—The Standard Electrical Dictionary. A popular dictionary of words and terms used in the practice of electrical engineering. 350 illustrations $3.00

SLOANE, T. O'CONNOR.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys $1.00

SLOANE, T. O'CONNOR.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

STEVENS, H. G.—Mechanical Catechism. For Stationary and Marine Engineers, Firemen, Electricians, Motormen, Ice Machine Men and Mechanics in General. 336 pages, over 240 illustrations. Cloth.....$1.00

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. A series of lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66).....$0.50

THOMPSON, SYLVANUS P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of.....$3.50

THOMPSON, SYLVANUS P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75).....$0.50

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. Eighth edition, revised and rewritten. Numerous illustrations and 19 plates. Nearly 1,000 pages.....$6.00

THURSTON, PROF. R. H.—Stationary Steam Engines, Especially Adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates $2.50

TREVERT.—How to Make Electric Batteries at Home. Illustrated $0.25

URQUHART.—Electro-Plating. A Practical Hand Book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions.....$2.00

WALKER, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98).....$0.50

WEBB, H. L.—A Practical Guide to the Testing of Insulated Wires and Cables. Illustrated.....$1.00

WEBB, HERBERT LAWS.—Telephone Hand Book. Illustrated. 12mo, cloth. Chicago, 1895.....$1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

WEBER.—The Handy Vest Pocket Electrical Dictionary. Cloth $0.25
Leather $0.50

"In all the land, range up, range down,
Is there ever a place so pleasant and sweet?"

THE

1,000

ISLANDS

There may be somewhere on the earth a more delightful region than that of the Thousand Islands, but if there is, it has not been discovered. It is as fine as the Bay of Naples, with no danger of being buried in hot ashes. There are 2,000 picturesque Islands scattered along the twenty-five miles of one of the most beautiful rivers in the world. You can find out a great deal regarding it in No. 10 of the "Four-Track Series" "The Thousand Islands," of the St. Lawrence River issued by the

RECEIVED AUG 1 1903 Answered.

July 30th, 1903.

Western Electrician,
Chicago, Ill.

Dear Sir:-

Inclosed I herewith hand you a New York draft for $18. in payment of the one year [illegible], which kindly receipt and return, and greatly oblige.

Allow me to compliment you on the circulation of the "Western Electrician" and its efficiency as an advertising medium. We had our plant advertised in other electrical journals, but the inquiries brought but little as in your columns for exceeded in numbers those of any other paper.

Very respectfully,

Bruce H. Youells,
City Auditor

A Trip Through Yellowstone Park

is what everyone hopes to have **some day.** It is the most wonderful trip in the world. There are more than 3,000 square miles of weird, marvelous, unimaginable things that can be seen nowhere else, therefore if one ever sees them one **must** go to the Park, in the heart of the magnificent Rockies with snow tipped peaks all around. If Old Faithful geyser, a Paint Pot, Mud Volcano, or Emerald Pool were to be found in Lincoln Park, Chicago; Central Park, New York; or Fairmount Park, Philadelphia; the people would flock to see it or them by tens of thousands. For a very small sum, comparatively, all these and hundreds more of nature's unduplicated marvels can be seen between June 1 and September 30 of each year, and one will enjoy, to boot, the best coaching trip in the country.

The **Northern Pacific** folder on Yellowstone Park, just issued, is a new, right up to date, finely illustrated dessertation on this Yellowstone Park trip. It is not descriptive, but deals with the detailed technical matters everyone needs to know about such a trip. It tells all about the hotels, the stage coaches, the roads, the cost of the tour; where the geysers, the waterfalls, the bears, the canyons are, and where the trout fishing is found. We have printed thousands of this beautiful leaflet and want everybody interested to have a copy, and it can be obtained by sending A. M. Cleland, General Passenger Agent, St. Paul, Minn., **two cents** with proper address.

"Wonderland 1904" which is a very fine pamphlet of 116 pages, descriptive of the Northwest, including the Park, will be sent for **six cents.**

Subscription Blank—Domestic.

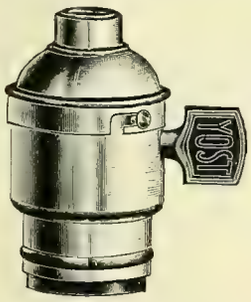
Yost Sockets and Specialties



The only safe, satisfactory and permanent safeguard against side-lopping shades and loose sockets—that's the Yost device for locking shell and cap together. If you haven't used them you are behind the times.

We make an up-to-date line of Specialties. Send for Catalogue. It won't cost you anything, but our improvements will save you time and annoyance, which means what?

Keep Up With the Procession.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

ALLSOP, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators and similar apparatus. 177 illustrations.....$1.25

ATKINSON, PHILIP.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

ATKINSON, PHILIP.—The elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition $2.00

AYRTON, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, Based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition $2.50

BADT, LIEUT F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches $1.00

BADT, LIEUT. F. B.—Incandescent Wiring Hand Book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

BADT, LIEUT. F. B.—Bell Hangers' Hand Book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.....$1.00

BADT, LIEUT. F. B.—Electric Transmission Hand Book. First edition, 3,000 copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more Practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

BEDELL, FRED'K AND ALBERT C. CREHORE.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations $2.50

BELL, LOUIS, PH. D.—The Art of Illumination. This is the only book in the language which deals directly with the scientific and artistic use of modern illuminants, electric and other. Cloth, 339 pages, 127 illustrations. Price $2.50

BONNEY, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations, 208 pages. 12mo, cloth....$1.25

BOTTONE, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand Book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone $0.50

BOTTONE, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

BOTTONE, S. R.—Electro-Motors. How Made and How Used. A Hand Book for Amateurs and Practical Men. Reduced to $0.50

BUCKLEY, W. J.—Electric Lighting Plants, Their Cost and Operation. 275 pages, many illustrations and diagrams. Paper $1.00

CROCKER, F. B. AND WHEELER, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

CUSHING, H. C., JR. Standard Wiring for Electric Light and Power. A compilation of formulæ, rules and requirements from the most modern practice, and in accordance with the rules and requirements of the Boston Fire Underwriters' Union, the New England Insurance Exchange, and as recommended by the Underwriters' International Electric Association. 12mo, leather $1.00

DESMOND, CHAS.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with, Alternate Electric Currents. Illustrated. Revised edition $2.50

DOBBS, A. E.—The Inspector and Trouble Man. A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards. 106 pages. Price...$1.00

DYER, A.—Induction Coils, How Made and How Used: Third edition. Boards $0.50

FLEMING, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations..$1.50

FLEMING, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents. 500 pages, fully illustrated and with copious index. Second edition $3.00
Synopsis of contents: Chapter I. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents. 8vo, cloth. London, 1892 .....$5.00

GAYETTY, J. W.—Motorman's Guide. A Practical Treatise on Street Railway Motors. Illustrations and diagrams. Cloth $0.50

GORDON.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations..$2.00

GORE, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition $2.00

GRIER, THOS. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference $1.00

HASKINS, C. C.—Electricity Made Simple. 233 pages, 108 illustrations. Paper covers.....$0.50
A valuable, non-technical work for those whose opportunities for gaining information on the branches treated have been limited.

HASKINS, C. H.—The Galvanometer and Its Uses. A Manual for Electricians and Students. Fourth edition; revised $1.50

HASKINS.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

HAWKINS, C. C. AND F. WALLIS.—The Dynamo, Its Theory, Design and Manufacture. 190 illustrations.$3.00

HAWKINS, N.—New Catechism of Electricity. A Practical Treatise Relating to the Dynamo and Motor, Wiring, the Electric Railway, Bell Fitting, etc., etc. Red leather, pocketbook form. 95 illustrations....$2.00

HOMANS, J. E., A. M.—A, B, C OF THE TELEPHONE. 352 pages, 269 illustrations. Price.....$1.00
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

HOPKINS, GEO. M.—Experimental Science. Elementary, Practical and Experimental Physics. 650 illustrations $4.00

HOPKINSON.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

HOPKINSON, DR. JOHN.—Dynamic Electricity; Its Modern Use and Measurements, Chiefly in Its Application to Electric Lighting and Telegraphy.....$0.50

HORSTMANN, H. C. AND VICTOR H. TOUSLEY.—Modern Wiring Diagrams and Descriptions. A Hand Book of Practical Diagrams and Information for Electrical Workers. 160 pages, over 200 illustrations. Full leather binding, pocket size 4x6.....$1.50

HOSPITALIER, E.—Domestic Electricity for Amateurs; Translated from the French, with additions by C. J. Wharton. With illustrations.....$2.50

HOUSTON, EDWIN J.—A Dictionary of Electrical Words, Terms and Phrases. Fourth edition, greatly enlarged, with over 6,000 additional words and definitions. 2 volumes, 1,000 pages.....$6.00

KAPP, GISBERT.—Electric Transmission of Energy and Its Transformation, Subdivision and Distribution. A practical hand book. Fourth edition.....$3.00

KAPP, GISBERT.—Alternate Current Machinery. Illustrated $0.50
(Vol. 96. Van Nostrand's Science Series.)

KAPP, GISBERT.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

KEMPE, H. R.—A Hand Book of Electrical Testing. Fifth edition 200 illustrations. 8vo, cloth. London 1892 .....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

KEMPE, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables, and Data. 32mo, leather $1.75

LOCKWOOD, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Hand Book of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations.....$2.50

LOCKWOOD, T. D.—Electrical Measurement and the Galvanometer; Its Construction and Use. Second edition $1.50

LYNDON, L.—Storage Battery Engineering. A Practical Treatise for Engineers. This is a practical work, intended for the electrical engineer who is called on to design and install storage battery equipments, or who has a battery power plant under his care. Cloth. 360 pages, 178 illustrations and diagrams, 4 large folding plates. Price $3.00

MEADOWCROFT, W. H.—The A, B, C of Electricity. 36 illustrations. 12mo, cloth. New York.....$0.50

MAYER AND DAVIS, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

MEYER, HENRY, C., JR., M. E.—Steam Power Plants. Their Design and Construction. Cloth. 165 pages, 63 illustrations, 15 folding plates. Price.....$2.00

MILLER, KEMPSTER B.—American Telephone Practice. 518 large octavo pages, 379 illustrations $3.00
This book treats of the subject in a simple and comprehensive manner from the practical standpoint, and almost entirely without the use of mathematics.

NOLL, AUGUSTUS.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

POPE, FRANKLIN LEONARD.—Modern Practice of the Electric Telegraph. A technical hand book for Electricians, Managers and Operators. 185 illustrations. Fourteenth edition, rewritten and enlarged.....$1.50

PRINDLE, H. B.—A Popular Treatise on the Electric Railway of To-day. Fully illustrated.....$0.25

REED, LYMAN C.—American Meter Practice. This is the only American book dealing with the theory and practice of current metering. Cloth. About 250 pages. Illustrated. Price $2.00

RUSSELL, STUART A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

SALOMONS, SIR DAVID.—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand Book. Seventh edition, revised and enlarged. With illustrations. 12mo, cl. London, 1893.....$1.50

SLOANE, T. O'CONNOR.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of Its Practical Application in every day life. Illustrated $1.00

SLOANE, T. O'CONNOR.—The Standard Electrical Dictionary. A popular dictionary of words and terms used in the practice of electrical engineering. 350 illustrations $3.00

SLOANE, T. O'CONNOR.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys $1.00

SLOANE, T. O'CONNOR.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

STEVENS, H. G.—Mechanical Catechism. For Stationary and Marine Engineers, Firemen, Electricians, Motormen, Ice Machine Men and Mechanics in General. 336 pages, over 240 illustrations. Cloth.....$1.00

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. A series of lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66).....$0.50

THOMPSON, SYLVANUS P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of.....$3.50

THOMPSON, SYLVANUS P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75).....$0.50

THOMPSON, SYLVANUS P.—Dynamo-Electric Machinery. Eighth edition, revised and rewritten. Numerous illustrations and 19 plates. Nearly 1,000 pages.....$6.00

THURSTON, PROF. R. H.—Stationary Steam Engines, Especially Adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates $2.50

TREVERT.—How to Make Electric Batteries at Home. Illustrated $0.25

URQUHART.—Electro-Plating. A Practical Hand Book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions.....$2.00

WALKER, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98).....$0.50

WEBB, H. L.—A Practical Guide to the Testing of Insulated Wires and Cables. Illustrated.....$1.00

WEBB, HERBERT LAWS.—Telephone Hand Book. Illustrated 12mo, cloth. Chicago, 1895.....$1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

WEBER.—The Handy Vest Pocket Electrical Dictionary. Cloth $0.25
Leather $0.50

BITUMINIZED FIBRE CONDUIT

FOR

ELECTRICAL UNDERGROUND CONSTRUCTION
ELECTROLYSIS PROOF WATER PROOF

A smooth laminated insulator of unchanging durability.

Forms a continuous sealed duct from manhole to manhole, impervious to moisture and through which leaking gas cannot penetrate.

There has never been a gas explosion in our conduits nor the slightest evidence of electrolysis.

Abrasion of the cables is an impossibility.

It saves sixty per centum of freight and handling cost and twenty to thirty-five per centum of construction.

Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.

All sizes from one inch to ten inches interior diameter. Bends of all angles.

The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

Send for illustrated book. Ask for prices giving size and quantities required

POSITION WANTED.

Electrical man of eight years' varied experience, good education and references, open for a position in the manufacture of electrical appliances and specialties, or other electrical work along a special line. Western states preferred. Address BOX 362, Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

I have a limited amount of money to invest in an A1 specialty which can be manufactured at small cost and sold at a good profit. Willing to take in partner or buy outright. Article must have merit to receive consideration. Give full particulars. Address BOX 361, care Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

40 to 50 K. W. direct-connected unit. Must be standard make in first-class condition and a bargain for spot cash. Address, McGUIRE & COBB, Hotel Warner, 33d St. and Cottage Grove Ave., Chicago.

FOR SALE.

A completely equipped electric light, power and heating plant in a city of 2,500 inhabitants. Incorporated under the laws of Illinois. The plant is thoroughly up to date, with complete duplicate equipment, and is constantly increasing its list of consumers. Parties owning the same wish to retire from this line of business and will sell for actual cost, taking part cash and mortgage for balance if desired. Charter, franchises and contracts will go with plant. Inspection of plant invited at any time. Address BOX 351, care Western Electrician, 510 Marquette Building, Chicago, Ill.

For Sale, a Bargain.

To a party who is in position to take personal charge of an electric light plant and capable of operating same, we will sell a plant on good paying basis for $1,500 to $3,000 down and balance on long time. Address, J. S. MAURER & CO., Monadnock Bldg., Chicago.

BIG BARGAINS—NEW MOTORS.

We offer subject to prior sale the following new motors:—One 5-H. P. 500-volt, Milwaukee Electric Co. Motor, speed, 1,700 RPM, $108.00; one 10-H. P. 500-volt, Milwaukee Electric Co. Motor, speed, 1,275 RPM, $172.80; one 5-H. P. 500-volt, Milwaukee Electric Co. Motor, speed, 1,200 RPM, $139.60; one 7½-H. P. 500-volt, Browning Electric Co. Motor, speed, 1,575 RPM, $133.20; one 2-H. P. 110-volt, Iron Clad Milwaukee Motor, speed, 1,300 RPM, $80.00; one 3-K.W. 125-volt, Iron Clad Dynamo, compound wound, 1,550 RPM, $111.60. These are all new machines, complete with sliding base, belt tightener, automatic release, rheostat and pulleys. THE WESCO SUPPLY CO., St. Louis, Mo.

CHAPTER I.—History and Principles of the Magneto Telephone. II.—History and Principles of the Battery Transmitter. III.—The Telephone Receiver. IV.—Carbon Transmitters. V.—Induction Coils. VI.—Batteries. VII.—Calling Apparatus. VIII.—The Automatic Shunt. IX.—The Hook Switch, and Circuits of a Telephone. X.—Commercial Calling Apparatus. XI.—The Telephone Relay or Repeater. XII.—Self-Induction and Capacity. XIII.—Telephone Lines. XIV.—Simple Switchboards for Small Exchanges. XV.—Listening and Ringing Apparatus for Switchboards. XVI.—Self-Restoring Switchboard Drops. XVII.—Complete Switchboards for Small Exchanges. XVIII.—Lamp Signal Switchboards. XIX.—The Multiple Switchboard. XX.—Transfer Systems. XXI.—Common-Battery Systems. XXII.—House Systems. XXIII.—Protective Devices. XXIV.—Distributing Boards. XXV.—Party Lines Non-Selective. XXVI.—Party Lines. Step by Step Selective Signaling. XXVII.—Selective Signaling by Strength and Polarity. XXVIII.—Harmonic Systems of Selective Signaling. XXIX.—Wire for Telephone Use. XXX.—Pole Line Construction. XXXI.—Overhead Cable Construction. XXXII.—Underground Cable Construction. XXXIII.—Testing. XXXIV.—Automatic Exchanges. XXXV.—Storage Batteries. XXXVI.—Specifications.

518 large octavo pages, 379 Illus. Price, $3.00.

This is the first complete treatise on Telephony in the English language. The author was peculiarly qualified for the task, having been an examiner in the U. S. Patent Office in the telephonic class, and subsequently as a telephone engineer had a wide experience in every branch of telephonic work. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

Copies of this or any other electrical book published sent prepaid, to any address in the world, on receipt of price.

A PRACTICAL BOOK

FOR PRACTICAL MEN

"MODERN WIRING DIAGRAMS AND DESCRIPTIONS FOR ELECTRICAL WORKERS."

By Henry C. Horstmann and Victor H. Tousley. 160 pages, over 200 illustrations. Full leather binding, red edges. Pocket size 4 x 6. Price, net, $150.

A work that not only tells you how to do it, but shows you.

THIS BOOK tells how to wire for call and alarm bells. For burglar and fire alarm. How to run bells from dynamo current. How to install and manage batteries. How to test batteries. How to test circuits. How to wire for enunciators; for telegraph and gas lighting. It tells how to locate "trouble" and "ring out" circuits. It tells about meters and transformers. It contains 30 diagrams of electric lighting circuits alone. It explains dynamos and motors; alternating and direct current. It gives 10 diagrams of ground detectors alone. It gives "Compensator" and Storage Battery installation. It gives simple and explicit explanations of the "Wheatstone Bridge" and its uses as well as volt-meter and other testing. It gives a new and simple wiring table, covering all voltages and all losses or distances, etc., etc.

SENT PREPAID ON RECEIPT OF PRICE

PRACTICAL ELECTRICITY

PRICE, $2.00 PREPAID.

287 Pages. 427 Questions and Answers. 95 Illustrations. 20 Tables (all that's required) Size, 6x4¾ inches. Flexible Binding. Set in a good, readable size type

IS a ***SCHOOL*** for the beginner and a ***VALUABLE REFERENCE*** for the Electrical Engineer. If you are willing to study carefully the nineteen chapters, and work out correctly the answers to the 427 questions yourself, and only refer to answers given in back of book to verify your own answers, you (whether you are the college student, the ambitious young man, the stationary engineer, the motorman, or anyone else whom the study of electricity would benefit) will have a knowledge of electricity which you could not acquire from any other source for ten times the cost of this little book.

Table of Subjects.

Chapter.
I—Wiring.
II—Electric Batteries, Electric Plating.
III—Magnetism.
IV—The Magnetic Circuit.
V—Magnetic Traction.
VI—Magnetic Leakage.
VII—Energy in Electric Circuit.
VIII—Calculation of Size of Wire for Magnetizing Coils.
IX—Calculation of EMF's in Electric Machines.
X—Counter EMF.
XI—Hysteresis and Eddy Currents.
XII—Armature Reaction.
XIII—Sparking.
XIV—Winding of Dynamos and Motors.
XV—Proper Method of Connecting Dynamos and Motors—Self Excitation.
XVI—Diseases of Dynamos and Motors, Their Symptoms and How to Cure Them.
XVII—Arc and Incandescent Lamps.
XVIII—Measuring Instruments.
XIX—Alternating Current.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., Chicago.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 350 illustrations. Price $3.00.
This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.
A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 269 illustrations. Price $1.00.
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on the subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.
A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $1.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price, $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. 136 pp.; illustrated. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

THE TELEPHONE HAND-BOOK

NEW AND REVISED EDITION, WITH A NEW CHAPTER ON "RECENT PROGRESS," BRINGING THE BOOK UP TO DATE.

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

160 Pages, 133 Illustrations, Cloth, Hand-Book Size, Price $1.00.

Extract from Preface.—"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Büttcher Receivers.
CHAPTER 13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
CHAPTER 28. Metallic Circuit.
29. Underground Wires
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony.
42. Recent Progress. Appendix.

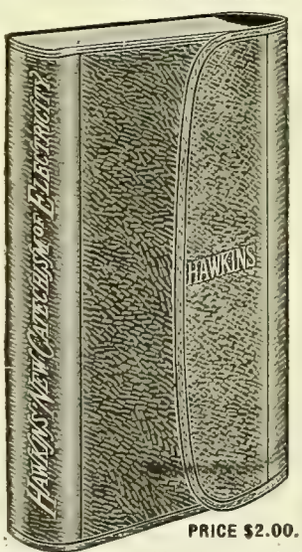
HARTFORD STEAM BOILER INSPECTION AND INSURANCE CO. HARTFORD, CONN.

HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

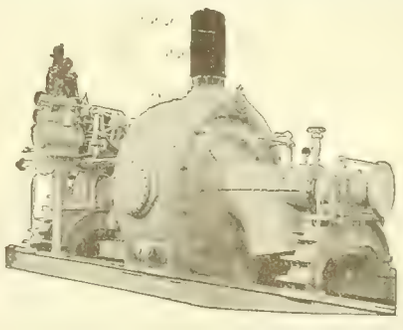
The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.



SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

The Inspector
AND
Trouble Man.
By A. E. DOBBS.

Full of information and diagrams for the operator, exchange owner, exchange manager, inspector, trouble man, lineman.

A complete description of telephones and their troubles. How to find and remedy them, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

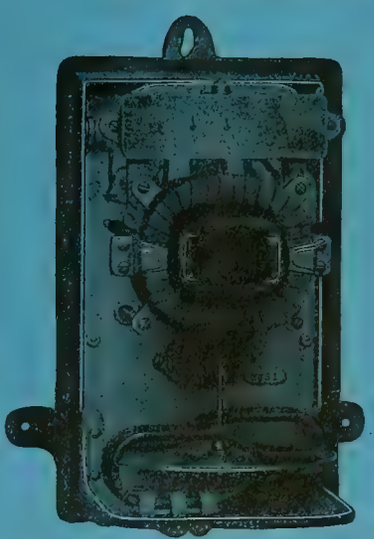
This is a practical book, written in **plain language**, and for **anyone** interested in telephony.

Mailed anywhere on receipt of price . . . ONE DOLLAR.

No technicalities. Substantially bound in cloth.

ELECTRICIAN PUBLISHING CO.,
510 MARQUETTE BUILDING, CHICAGO.

SOMETHING NEW
IN METERS



An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switcharm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

Fessenden Wireless Telegraph System

THE NATIONAL ELECTRIC SIGNALLING CO.

As the result of five years' experimental work, including a working test of a full year, this system is now put on the market as being equal as regards speed and reliability to manually operated wire lines, and superior as regards first cost and maintenance.

This system uses no coherer, the receiver consisting of a minute cylinder of liquid whose resistance is lowered by the heating effect of the electric waves. As it is approximately twenty-five to fifty times as sensitive as the Solari coherer, and is admirably adapted to sharp tuning, much less energy is needed for a given distance, and difficulties from atmospheric disturbances and interference can be overcome.

This system does not infringe the patents of any other company and the operation of the apparatus is guaranteed.

Telegraphic sets for working up to 150 miles over land or up to 350 miles over sea are now standardized and can be supplied from stock or on short notice. Sets for working over longer distances supplied at short notice. Sets can be tested by purchaser before delivery between the company test stations, approximately ninety miles over land, or between the company's marine stations.

BITUMINIZED FIBRE CONDUIT
FOR
ELECTRICAL UNDERGROUND CONSTRUCTION
ELECTROLYSIS PROOF WATER PROOF

A smooth laminated insulator of unchanging durability.
Forms a continuous sealed duct from manhole to manhole, impervious to moisture and through which leaking gas cannot penetrate.
There has never been a gas explosion in our conduits nor the slightest evidence of electrolysis.
Abrasion of the cables is an impossibility.
It saves sixty per centum of freight and handling cost and twenty to thirty-five per centum of construction.
Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.
All sizes from one inch to ten inches interior diameter. Bends of all angles.
The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

Send for illustrated book. Ask for prices giving size and quantities required

NEW YORK INSULATED WIRE COMPANY,

MAIN OFFICE: 114, 116 & 118 Liberty St., New York.
BRANCHES: CHICAGO: 192 Desplaines St. BOSTON: 7 Otis St. SAN FRANCISCO: 33 Second St.

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED.

By first-class electrician with vast experience and general knowledge of the electrical machinery with light and power plant, railways, mills, factories or shops; conversant with general repair. Thoroughly understands care, maintenance and economical management of same. Capable of taking charge of any system. Strictly sober and reliable; best reference as to character and ability. Address BOX 354, care Western Electrician, 510 Marquette Building, Chicago.

POSITION WANTED.

By young married man with several years' experience running and testing dynamos, electric machinery and holding correspondence school diplomas, as assistant in electrical contractor's or consulting engineer's office. Have some knowledge of draughting and curve plotting, and can furnish good references. Address BOX 364, care of Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

40 to 50 K. W. direct-connected unit. Must be standard make in first-class condition and a bargain for spot cash. Address, McGUIRE & COBB, Hotel Warner, 33d St. and Cottage Grove Ave., Chicago.

FOR SALE.

A completely equipped electric light, power and heating plant in a city of 2,500 inhabitants. Incorporated under the laws of Illinois. The plant is thoroughly up to date, with complete duplicate equipment, and is constantly increasing its list of consumers. Parties owning the same wish to retire from this line of business and will sell for actual cost, taking part cash and mortgage for balance if desired. Charter, franchises and contracts will go with plant. Inspection of plant invited at any time. Address BOX 351, care Western Electrician, 510 Marquette Building, Chicago, Ill.

FOR SALE.

60,000 1¼x8 Locust Pins, No. 2 quality, at price of $3.50 per 1,000, in lots of 500 pins and up, f. o. b. cars North Wilkesboro, N. C.
J. S. BOGGS, Albany, Georgia.

FOR SALE.

1 General Electric A. 120, 1M volts.
2 General Electric A. 60, 1M volts, 125 cycles.
1 15 K. W. 110 V. Edison Multipolar.
2 Excelsior 75-Light Arc Machines with regulator.
1 Westinghouse 75-Light with separate exciter.
60 T. H. Double Carbon Arc Lamps.
40 Western Electric Single Carbon Arc Lamps.
1 White Marble Switchboard, three panels, switches and instruments complete.
1 Arc panel with instruments and plugging device complete for 12 circuit, 4 machines.
All above secondhand but in good operating condition. Will sell all or part at a bargain. Address 363 care Western Electrician, 510 Marquette Building, Chicago.

FOR SALE.

One 60 A. G. E. 125-cycle, 1040-volt, single-phase alternator. Armature newly rewound. New commutator on alternator and exciter. Rheostats. One 70-light T. H. arc machine complete with regulator, wall controller and 45 double carbon lamps. Extra armature. These machines are in first-class condition.
CITY OF OCONOMOWOC,
Lighting Department, per F. R. Hubbard.

FOR SALE.

Will sell whole or part interest in patented electrical specialty—thoroughly introduced to the trade. Can offer to any one looking for A-1 electrical specialty—a patented article that has been already placed on the market and widely advertised and the demand steadily increasing. Manufactured at low cost. Profits large. Address BOX 365, care of Western Electrician, 510 Marquette Bldg., Chicago.

Points in Wisconsin and the Northwest

are covered by Wisconsin Central Railway's convenient, solid, wide vestibuled trains, equipped with Pullman sleepers, free reclining chair cars and modern coaches which leave Central Station, 12th Street and Park Row (Lake Front), Chicago for St. Paul, Minneapolis, Ashland and Duluth, connecting with all western lines. Meals in dining and cafe cars served a la carte.
For tickets and further information apply to nearest ticket agent, or write
JAS. C. POND, Gen'l Pass. Agt., Milwaukee, Wis.

For Sale, a Bargain.

To a party who is in position to take personal charge of an electric light plant and capable of operating same, we will sell a plant on good paying basis for $1,500 to $3,000 down and balance on long time. Address, J. S. MAURER & CO., Monadnock Bldg., Chicago.

NOTICE.

The Robert L. McOuat Electrical Supply Business is in my hands for reorganization. It has been in successful operation for eight years in Indianapolis. There is but one competing house. The books are open for the most careful investigation. The business has averaged about $100,000 per annum. It can be doubled. It is a splendid opening for substantial investment. It requires only about $16,000 to make the purchase. Properly secured notes will be accepted. Address ALFRED F. POTTS, Trustee for Reorganization, 125 S. Meridian St., Indianapolis.

"In all the land, range up, range down,
Is there ever a place so pleasant and sweet?"

THE

1,000

ISLANDS

There may be somewhere on the earth a more delightful region than that of the Thousand Islands, but if there is, it has not been discovered. It is as fine as the Bay of Naples, with no danger of being buried in hot ashes. There are 2,000 picturesque Islands scattered along the twenty-five miles of one of the most beautiful rivers in the world. You can find out a great deal regarding it in No. 10 of the "Four-Track Series" "The Thousand Islands," of the St. Lawrence River issued by the

NEW YORK CENTRAL

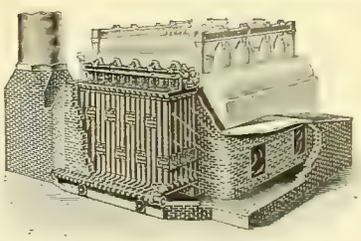
When We Say That...

GREEN'S ECONOMIZER



Saves from 10 to 20% in fuel, we state but one advantage; possibly the increased boiler capacity secured through purifying of feed-water: or saving in boiler repairs through keeping the feed-water heated above the evaporative point; or reserve of **Hot Water** to meet sudden demands for power means more to you, whichever way, our free booklet explains the saving. Your engineer can testify to its trueness.

THE GREEN FUEL ECONOMIZER CO.

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gateage.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	73.6%
213 ft.	¾	257 r. p. m.	3000	95%	85.2%
213 ft.	Full	257 r. p. m.	3500	95%	84.5%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

The Inspector
AND
Trouble Man.
By A. E. DOBBS.

Full of information and diagrams for the operator, exchange owner, exchange manager, inspector, trouble man, lineman.

A complete description of telephones and their troubles. How to find and remedy them, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

This is a practical book, written in **plain language,** and for **anyone** interested in telephony.

Mailed anywhere on receipt of price . . . **ONE DOLLAR.**

No technicalities. Substantially bound in cloth.

ELECTRICIAN PUBLISHING CO.,
510 MARQUETTE BUILDING, CHICAGO.

SOMETHING NEW
IN METERS

An entirely new means of compensating for friction and vibration on light loads in a direct-current wattmeter, by using a small multipoint switch in connection with the compensating coil. By moving the switch arm over the points of contact, any desired range of compensation can be secured instantly. It is the simplest, quickest and most effective means yet devised and is absolutely permanent.

Another Weston Patent Sustained

Patent No. 497,482, for shunts for Electric Light and Power Stations sustained by his honor Judge Holt of the United States Circuit Court, Southern District of New York.

Extract from the opinion of the Court in the case of the Weston Electrical Instrument Co., vs. Empire Electrical Instrument Co.

"This is a suit to restrain the infringement of a patent, No. 497,482, dated May 16th, 1893, issued by Edward Weston and now owned by the complainant, for a shunt for electric light and power stations. There are no questions as to jurisdiction, parties or title. **The proof of infringement is conclusive and is not controverted.** * * * Prior to Weston's patent in 1893, no practical method for the use of a shunt in connection with the measuring instruments for such large currents had been found, although the necessity for such an instrument was thoroughly appreciated, **and many electricians all over the world attempted to invent one.** In actual practice, no shunt at that time was used. The measuring instrument was applied to the entire current, but the result was unsatisfactory. The measuring instruments were complicated, inconvenient and expensive, and the measurements which could be made by them were inaccurate and unsatisfactory.

"The essential problem in discovering a shunt which could be used with a powerful current was not electrical but thermal. * * * The instruments manufactured under Weston's patent **immediately entered into substantially universal use** in all large central electric power and light stations, and have ever since been used almost exclusively as ammeters of large electric currents. * * * All the shunts relied upon by the defendants were shunts which made no use of the methods which Weston used to dissipate the heat in the case of a large current. **None of them had struck upon the idea of making the plates of high resistance short, so that the heat in them would be rapidly absorbed by the terminals, and none of them had hit upon the idea of making the terminals massive,** so that they would radiate a large amount of heat rapidly from the plates of high resistance.

"I think that Weston's patent not only embodies invention, but that it embodies invention of a very high and superior order. It adopted a method of dissipating heat which was not only novel, but was in a line entirely opposite to the direction in which all other electricians had been working. * * * La Roche testified that he constructed in or about 1884 an instrument called a voltmeter, and a shunt, and that from 1884 until about 1888 or 1889, he used this shunt in connection with this voltmeter as a measuring instrument, for the purpose particularly of testing storage batteries, at his workshop in Germantown or Philadelphia. * * * The evidence establishes in my opinion, that the instrument called a voltmeter was formed by putting together a number of instruments or parts embodying different inventions, none of which had been made or was known to electricians before Weston applied for his patent; that it would have been a marvelous and almost impossible thing for the most skillful electrical inventor at that time to have devised such an instrument; that La Roche is a man not only without any scientific education but without even the ordinary electrical knowledge of a skillful electrical mechanic; that his reputation for veracity is bad; **that his shunt never was used as a measuring instrument in connection with his voltmeter between 1884 and 1889; that the various pieces of apparatus constituting the voltmeter were put together by La Roche after the issue of the patent in suit to Weston, with the object of being used in support of his own untruthful testimony** to be given in this and other suits for the purpose of attempting to invalidate this and other patents issued to Weston; **that a part of the apparatus contained in the said voltmeter are two magnets, which are so arranged that their poles neutralize each other; that as a result it is impossible for a current of electricity in passing through the instrument to move the coil; that therefore the instrument is and always has been inoperative, and the shunt could not have been used as a measuring instrument in connection with it.** In short, I cannot avoid the conclusion that the testimony of La Roche in this case was deliberately and intentionally untruthful and that to support it he deliberately fabricated an instrument to be used upon this trial and other trials involving Weston's patents. **It was a careful, premeditated and elaborate attempt, by untruthful testimony, fortified by fabricated exhibits, to deprive Weston of his just rights in his invention, to impose upon this Court, and to pervert the course of justice. I direct that the evidence and exhibits in this case be submitted to the District Attorney in order that he may take under consideration the question whether a prosecution should be brought against La Roche for perjury."**

One 60 A. G. E. 125-cycle, 1040-volt, single phase alternator. Armature newly rewound. New commutator on alternator and exciter. Rheostats. One 50-light T. H. arc machine complete with regulator, wall controller and 45 double carbon lamps. Extra armature. These machines are in first-class condition.
CITY OF OCONOMOWOC,
Lighting Department, per F. R. Hubbard.

FOR SALE.

Engine and dynamo on account of enlargement of plant. One 14x36 inches Corliss engine and one 90 kilowatt single-phase General Electric Co. alternator, speed 900 revolutions per minute, and exciter, all in first-class operating condition. Apply to F. E. EVANS, recorder, Two Harbors, Minn., or O. CLAUSSEN, consulting engineer, German American Bank Building, St. Paul, Minn.

Gas and Electric Light Plants

We act as agents for the sale of gas and electric light plants

If you have a plant to sell write us

J. S. MAURER & CO., MONADNOCK BLDG. CHICAGO

NOTICE.

The Robert L. McOuat Electrical Supply Business is in my hands for reorganization. It has been in successful operation for eight years in Indianapolis. There is but one competing house. The books are open for the most careful investigation. The business has averaged about $100,000 per annum. It can be doubled. It is a splendid opening for substantial investment. It requires only about $16,000 to make the purchase. Properly secured notes will be accepted. Address ALFRED F. POTTS, Trustee for Reorganization, 125 S. Meridian St., Indianapolis.

Points in Wisconsin and the Northwest

are covered by Wisconsin Central Railway's convenient, solid, wide vestibuled trains, equipped with Pullman sleepers, free reclining chair cars and modern coaches which leave Central Station, 12th Street and Park Row (Lake Front), Chicago for St. Paul, Minneapolis, Ashland and Duluth, connecting with all western lines. Meals in dining and cafe cars served a la carte.
For tickets and further information apply to nearest ticket agent, or write

BITUMINIZED FIBRE CONDUIT

FOR

ELECTRICAL UNDERGROUND CONSTRUCTION
ELECTROLYSIS PROOF WATER PROOF

A smooth laminated insulator of unchanging durability.
Forms a continuous sealed duct from manhole to manhole, impervious to moisture and through which leaking gas cannot penetrate.
There has never been a gas explosion in our conduits nor the slightest evidence of electrolysis.
Abrasion of the cables is an impossibility.
It saves sixty per centum of freight and handling cost and twenty to thirty-five per centum of construction.
Process of laying is simple, rapid and inexpensive. There is no loss from breakage or fitting. It is self-aligning and cannot settle out of alignment.
All sizes from one inch to ten inches interior diameter. Bends of all angles.
The foremost electrical engineers are recognizing and testifying to the scientific advantages of our system of subway construction over all previous methods.

Send for illustrated book. Ask for prices giving size and quantities required

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. **By CLARK CARYL HASKINS.** Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text-book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS. FOR STUDY OR REFERENCE.

Standard Electrical Dictionary.

BY PROF. T. O'CONOR SLOANE.
Author of "Arithmetic of Electricity," "Electricity Simplified," "Electric Toy Making," Etc.

682 Pages, 393 Illustrations. Handsomely bound in cloth, 8vo, $3.

An Entirely New Edition, Brought Up to Date and Greatly Enlarged.

COMPLETE—CONCISE—CONVENIENT.

In publishing the "Standard Electrical Dictionary," the author has adhered to what the work purports to be, exhausting the subject of electrical terms, giving each title the clearness of explanation necessary to make the understanding of it complete without unnecessary elaboration. In this work, every electrical word, term, or phrase will be found intelligently defined.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in any way interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact, it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

A review of patents pertaining to Telephones and Telephonic Apparatus by the

American Electrical Engineering Association.

CONTENTS: Introductory.—Percentage of Patents Sustained.—Supreme Court Decisions.—Berliner Case.—Induction Coil.—Drawbaugh Cases.—Hunnings Transmitter.—Subscribers' Calls.—Switchboards.—Law System.—Mann System.—Multiple Board.—Express System.—Raverot-Hess System.—Comparative Advantages, Multiple and Divided Board Systems.—Carney Plug Board.—Brief Mention.—Automatic Switchboards.—Conclusions.—Index.

ILLUSTRATIONS.

Patent of A. G. Bell, No. 174,465. Patent of Emile Berliner, No. 233,969. Patent of Emile Berliner, No. 463,569. Patents of Emile Berliner in Parallel Columns. Patent of C. A. Cheever, No. 208,463. Patent of H. H. Eldred, No. 303,714. Patent of Thos. A. Watson, No. 256,258. Patent of L. B. Firman, No. 283,334 Patent of M. G. Kellogg, No. 247,199. Patent of C. E. Scribner, No. 330,058. Patent of C. E. Scribner, No. 300,144. Trunking Principle. Patent of Shaw & Childs, No. 319,856. Mann System. Patent of L. B. Firman, No. 252,576. Western Union Pin Switch. Express System. Patent of Sabin & Hampton, No. 513,534. Subscriber's Automatic Signal. Raverot-Hess System. Patent of M. J. Carney, No. 258,886. Apostoloff System.

Handsomely Bound in Cloth. Sent Prepaid on Receipt of Price, $1.50.

HARTFORD STEAM BOILER INSPECTION AND INSURANCE CO. HARTFORD, CONN

FIBRE-GRAPHITE COMMUTATOR BRUSH NOISELESS SELF-LUBRICATING

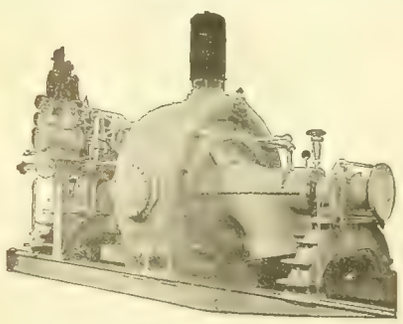
There's No Friction

with the Fibre-Graphite Commutator Brush.

Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

HOLMES FIBRE-GRAPHITE MFG. CO.

5155 Wakefield St., Germantown, PHILADELPHIA.



SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MFG. CO., Niagara Falls, N. Y. Tests conducted by competent engineers developed as follows:—

Head.	Gatege.	Speed.	H. P.	Generator Effcy.	Turbine Effcy.
213 ft.	½	257 r. p. m.	1750	95%	730%
213 ft.	¾	257 r. p. m.	3000	95%	856%
213 ft.	Full	257 r. p. m.	3500	95%	815%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made after turbines were installed to position, direct coupled to Generators. Francis' weirs and formulae for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES.

The new Duncan has all the up-to-date features that go to make it the best on the market. It will pay you to try one and investigate its merits for yourself.

Its multipoint switch method of compensating for friction and vibration is conceded to be the simplest, quickest and most reliable means yet devised. It is superior in every respect to the old and clumsy methods of adjusting the compensating coil bodily and is not damaged by lightning.
